System Approval Certificate for Kingspan Kooltherm K15 Rainscreen Board.

Certificate No. 452-7-7194 .pdf

Debbie / Steve

We need to discuss this urgently.

Regards

Sarah

Hi Folks

I have managed to get an LABC certificate - from Hertfordshire, that says the Kingspan K15 insulation can be used in a mixture of insulation thicknesses, masonry or steel framed substrates, a min cavity gap of 50mm with a range of rainscreen claddings.

I am sure that this will be sent to us officially by Kingsapn when Mark Stevens gets back from the Middle East. I would like to think we have tried to establish some guide lines like I was proposing, so that we could at least give Mark some help with his system configurations.

Also note that this appears to give automatic acceptance for sytems over 18m.

Let me know how we want to move forward.

Cheers John
