Harvey ,

For confirmation CMAC has not been in discussion with the TMO.

Regards

Patrick Kelly

Can you please confirm when we can meet and agree a method of construction for the replacement riser at the above?

I have just taken a call from a resident who was advised that agreement had already been given to National Grid and we could commence with our works. Unfortunately, agreement has not been received by me, but if this is the case, can you please forward to me.

Thank you for the response and please find the attached draft solution, which allows for the riser going through the stairwell from the basement to the top floor. I am assuming there is room above the false ceilings on each floor to accommodate the pipes through the landing areas, but this will have to be confirmed by removal of a couple of sections of the ceiling to ensure a route is available. A site meeting will be critical to ensure we can find a route compliant with gas and fire safety regulations.

If you have any queries, please let me know.

Good morning Harvey,

We are still awaiting the original report from when the gas was cut off initially. Could you please follow up with NG and provide this asap?

Could you please detail the most recent proposal in writing so this can be reviewed before any further site meetings?

Kind regards,

Charlie

I have been able to review a design proposal for the above, but will need input from yourself on whether it will compromise the fire worthiness of the block or be aesthetically acceptable. Are you available to meet on site one afternoon during the week commencing 17th October?

Please call if you have any queries.

I am sorry for the delay in contacting you regarding the above, but as was suggested at our meeting, we have found it difficult to find a compliant route for a gas riser to restore supplies. At this moment, I still do not have a viable solution for the restoration of gas and have arranged to meet my design manager on site this Friday, to review the options that we have already discarded and investigate the possibility of finding a viable solution.

One of the issues that has come to light is the ventilation system for the communal areas on each floor. It would be useful if you could confirm the principles of this system, as it appears to be a

mechanically operated, forced ventilation system on a timer, which, if correctly understood, restricts where we can run pipe.

I know that the possibility of buying out the right to gas was discussed at our meeting and am still mindful this may be the ultimate solution on this occasion. Have you been able to confirm whether the electrical system is capable of coping with the additional load?

I will update you further following my site meeting.
