Subject: RE: Celotex RS5000 - BRE Testing - 190 Strand

Let's discuss as part of our plans for 2015 when we meet on the 19th.

Thanks
Paul

Subject: FW: Celotex RS5000 - BRE Testing - 190 Strand

Hi Paul / Debbie,

I have spoken to Total Façade Solutions about potentially giving us guidance as how to move forward with RS5000 (Testing etc.)

We would need to employ them directly.

Andy Jones is one of the most knowledgeable people in the façade industry and advises the likes of the Berkeley Group as to what products comply.

Please let me know if you would be willing to employ them as a consultant, even if it is only for one day.

Thanks,
Jonathan

Hi

Will have a chat with Andy.

We normally work on £1200. - £1500 per day or on contract or retainer based on a full scope from the client. From which we associate predicted hours and price accordingly. Obviously day rate is rated higher than contract rate
We have worked for a number of companies on similar requirements in recent times both in the UK and abroad, and would be able to bring a significant addition to Celotex

Speak soon

Regards

John Chatley

Hi John,

Here is the email sent to Andy the other week.

Please can you let me know a list of rates so that I can then look at getting Andy in to the office at some point to help with guidance for further potential testing of our RS5000 Board.

Thanks,
Jonathan

Subject: Celotex RS5000 - BRE Testing - 190 Strand

Importance: High

Hi Andy,

Reason for me trying to get hold of you over the last couple of days is twofold.

1. I met with Steve Howard from the BRE last Tuesday to discuss the option of further testing of our RS5000 product for BS8414 and choice of materials.

One thing that Steve mentioned was that he would like to understand better the decision making process for designing a façade system. He is privy to manufacturers tests at the BRE but would like clarification from the other side of the fence.

Would you be interested in arranging to speak with Steve? This would certainly help with our future discussions when deciding what we should test.

Stephen Howard

howards@bre.co.uk **W:** www.breglobal.com

2. We are currently looking into expanding our test data next year and would like to understand from you the materials that you think that we should look to test for BS8414.

We understand that further testing should involve;

- non-combustible Sheathing Board for BS8414:2
- Realistic Thinnest & Thickest Insulation Solution
- Cladding Panels (Class 0 or Euroclass A1/A2)

The biggest area for interpretation are the cladding panels because even if they have Class 0 there is no guarantee that they will perform well in the BS8414:2 test.

Your input here would be highly valuable.

Finally, we never got down to speaking about 190 Strand. Are you around over the next couple of weeks at St. Edward to run through the current specs?

Have a good weekend and speak soon.

Kind regards,
Jonathan
