RS5000 Specification for buildings above 18 metres in height

Dear All,

After review with Paul Evans we will now adopt the following practice.

Where a calculation is being provided for a project where the building is above 18m we will add a set of words to the e-mail which we send to the customer.

The same set of words can be used to answer any enquiries as to whether a particular solution is compliant.

In other respects please continue to deal with all 18m enquiries as per our existing policy.

This means that we produce calculations for all projects using the latest RS5000 templates that we have set up and a copy of the compliance guide should be sent with all 18m calculations.

Richard will set up a template in the template folder, so we can quickly copy and paste the words into our e-mails.

If you are unsure of the response to give with any particular enquiry then have a chat with me.

Thank you very much,

Jamie

<starts>

Thank you for your enquiry.

Celotex RS5000 has been successfully tested to BS8414 Part 2 and so can be considered for use in buildings above 18 metres.

Please find attached a copy of our Rainscreen Cladding Compliance Guide which gives details of our fire test and some background to the Building Regulations requirements.

It will be the responsibility of the building control body to judge compliance on a project by project basis. We would recommend showing them the compliance guide and the details of your proposed system and have a discussion with them as early in the design process as possible.

Our tested system comprised an external rainscreen façade and SFS frame. Where your design differs from the tested construction then this should become a discussion point with the building control body. It is critical that compliance is agreed before the design is finalised or work commences on site.
