

Masterdor Information

Frame and threshold options

A narrow frame option is also available for use with the Suredor GRP where it is important to maximise the available brickwork opening to achieve the widest possible clear opening without needing to cut back the brickwork (e.g. for wheelchair access).

Both 25mm standard and 15mm wheelchair Part M compliant thresholds are available.

Fire doors

Our fire door range has been developed to the highest specifications and tested to exacting standards to achieve 30 and 60 minute fire resistance.

Designed and developed by Manse Masterdor, the fire door-set is ideal for use in situations such as flats, shared entrances and multiple entrance dwellings where Building Regulations require a fully approved fire door-set.

Security, safety and flexibility are a feature of every fire door-set. A multi-point locking system is fitted as standard and each door-set is made to measure to meet your exact specification requirements and all door-sets are supplied with hardware and glazing factory fitted.

As you would expect our fire doors feature the following:

- High performance
- Virtually maintenance free
- High resistance to warping, bowing or twisting
- Resistance to knocks and scratches
- Secure and durable
- Simple to fit
- 10 year guarantee
- Approved document L compliant (part J in Scotland)
- Meets the requirements of PAS23/24
- Secured by Design licensed

Access solutions

We work with specifiers and those involved in providing access for disabled people to develop appropriate solutions that consider the recommendations of the DDA and the requirements of the Approved Document M and BS8300:2001 in relation to access systems.
