---

Hi everyone,

I've managed to find the attached drawing from the 8414-1 on a folder in the O:drive. This is the only drawing that appears in the BS 8414-1 test report.

The sheathing board company is UAC, although I'm struggling to work out which product was used. Again with the fire barriers, it just says "2.5mm thick graphite based intumescent strip bonded to a nominal 0.6mm thick galvanised steel sheet" which is quite ambiguous.

We are relying on Phil to find something concrete in the archives. Hopefully he will turn up the goods.

Kind regards,

Adam Heath

Technical Project Leader
