Testing
Advising
Assuring

Executive Summary

Objective To determine the performance of the following product when tested in accordance with BS EN ISO 11925-2:2010.

Generic Description	Product reference	Thickness	Weight per unit area or density
Foil-faced phenolic insulation board	"Kooltherm K10FM"	100mm (In practice) 60mm (As tested)	3.67kg/m ²
Individual components used to manufacture composite:			
Aluminium foil	Confidential	Confidential	Confidential
Foam	"K10"	100mm	Confidential
Please see page 5 and 6 of this test report for the full description of the product tested			

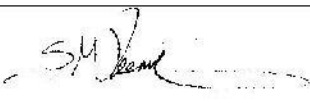

Test Sponsor Kingspan Insulation Limited, Pembrige, Leominster, Herefordshire, HR6 9LA

Test Results: On each set of six specimens which were tested, the flame tip did not reach a distance of 150mm before the end of the test.

Date of Test 4th June 2013

Test Details

Purpose of test	<p>To determine the performance of specimens of a product when they are subjected to the conditions of the test specified in BS EN ISO 11925-2:2010 "Reaction to Fire tests - Ignitability Of Building Products Subjected to Direct Impingement of Flame – Part 2: Single Flame Source Test".</p> <p>The test was performed in accordance with the procedure specified in BS EN ISO 11925-2:2010 Reaction to Fire Tests - Ignitability of Building Products subjected to direct impingement of flame – Part 2: Single Flame Source Test, and this report should be read in conjunction with that BS EN ISO Standard.</p>
Scope of test	BS EN ISO 11925-2 specifies a method of test for determining the ignitability of building products by direct small flame impingement under zero impressed irradiance using specimens tested in a vertical orientation.
Fire test study group/EGOLF	Certain aspects of some fire test specifications are open to different interpretations. The Fire Test Study Group and EGOLF have identified a number of such areas and have agreed Resolutions which define common agreement of interpretations between fire test laboratories which are members of the Groups. Where such Resolutions are applicable to this test they have been followed.
Instruction to test	The test was conducted on the 4 th June 2013 at the request of Kingspan insulation Ltd the sponsor of the test.
Provision of test specimens	The specimens were supplied by the sponsor of the test. Exova Warringtonfire was not involved in any selection or sampling procedure.
Conditioning of specimens	<p>The specimens were received on the 24th May 2013</p> <p>Prior to test the specimens were stored for 10 days in a standard atmosphere as defined in BS EN 13238:2010 Conditioning Procedures and General Rules for selection of substrates until constant mass was achieved.</p>
Intended application	Thermal insulation.
Substrate	The specimens were tested without a substrate present.
Flame application time	The flame was applied for 30 seconds.

Description of Test Specimens

The description of the specimens given below has been prepared from information provided by the sponsor of the test. All values quoted are nominal, unless tolerances are given.

General description		Foil-faced phenolic insulation board
Name of manufacturer		Kingspan Insulation Ltd.
Trade name		"Kooltherm K10FM"
Batch reference		"8*86918.1002"
Overall product thickness		100mm (In practice) 60mm (As tested) In accordance with the standard, the maximum thickness of specimen that can be tested is 60mm. If the normal thickness of a specimen exceeds 60mm, it is necessary to reduce the thickness of the specimen to a maximum of 60mm by cutting away material from the unexposed surface.
Weight per unit area		3.67kg/m ²
Product configuration		<ul style="list-style-type: none"> • Foil facer • Phenolic foam • Foil facer
Aluminium foil	Product reference	See Note 1 below
	Generic type	Composite foil
	Name of manufacturer	See Note 1 below
	Weight per unit area	See Note 1 below
	Thickness	See Note 1 below
	Colour	"Silver Foil"
	Flame retardant details	See Note 2 below
Foam	Product references	"K10"
	Generic type	Phenolic foam
	Name of manufacturer	Kingspan Insulation Ltd.
	Thickness	100mm
	Density	See Note 1 below
	Colour reference	"Pink"
	Flame retardant details	See Note 2 below
Brief description of manufacturing process		Facings auto adhesively bonded to phenolic foam during the manufacturing process. Foam boards are made at 70°C under pressure

Note 1: The sponsor of the test has provided this information but at the specific request of the sponsor, these details have been omitted from the report and are instead held on the confidential file relating to this investigation.

Note 2: The sponsor of the test has confirmed that no flame retardant additives were utilised in the production of the component.

Test Results

Number of specimens tested

Six specimens were tested, each of which were subjected to surface exposure to flame with the foil face exposed.

Six specimens were tested, each of which were subjected to edge exposure to flame with the foil face exposed.

Six specimens were tested, each of which were subjected to edge exposure to flame with the specimen turned at 90° round its vertical axis and the foam face exposed.

Applicability of test results

The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test, they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

The test results relate only to the specimens of the product in the form in which they were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product which is supplied or used is fully represented by the specimens which were tested.

The test results for the individual specimens, together with observations made during the test and comments on any difficulties encountered during the test are given in Tables 1, 2 and 3.

On each set of six specimens which were tested, the flame tip did not reach a distance of 150mm before the end of the test.

Validity

The specification and interpretation of fire test methods are the subject of ongoing development and refinement. Changes in associated legislation may also occur. For these reasons it is recommended that the relevance of test reports over five years old should be considered by the user. The laboratory that issued the report will be able to offer, on behalf of the legal owner, a review of the procedures adopted for a particular test to ensure that they are consistent with current practices, and if required may endorse the test report.

This report may only be reproduced in full. Extracts or abridgements shall not be published without permission of **Exova Warringtonfire**.
