Scott.

Please find below your answers in red. Please let me know if I have got anything wrong.

All the best Tom My ref: 7678

Page 7 – Point 21 – there were 13 <u>Control Staff</u> on duty at GVP at the time of the first call, which included 1 x CC 2 x SCO's and 10 CO's (not 13 CO's which could be misleading).

This appears to be a typo, in the context of the Control report point 21, last line, should have read Control Staff.

Page 8 – Point 24 – staff in control at 2GVP Call Takers x 7 (not x 6)

This is explained later in the report. There were 6 staff specifically allocated as call takers, as well as a single staff member allocated as a paging officer. The paging officer is also able to take calls, and therefore can act as a 7<sup>th</sup> call taker if required.

Page 10 – Point 34 – This does not make sense. The TOC "time of call" on the mobilising message is the time that the Control Officer first selects the address, which means that the New Incident Frame (NIF) has already been generated by the system. The creation time is the time when an NIF is first generated.

This is correct. The NIF is the incident creation time i.e. when the call taker receives the call in their headset. At this point a new incident frame is generated and the time of call (TOC) is only recorded when the operator selects first address.

Page 12 - Point 48 – I was not aware that an Officer can update their status by data exchange on their hand held radio, I thought this could only be done via speech with Control. There may be a way of doing this but it is not done in reality. They can do via radio, though it is only occasionally used.

Page 31 – Point 161 – "Sampling of calls was to include fire survival calls". This is not done presently as the calls that are sampled with regards to Call Coach (which came in to operation after Lakanal) are randomly selected from wav files so there is no way of knowing or picking fire survival calls. I personally have not been made aware that this should be done (this may have to be taken up with Senior management following Lakanal?)

Generally calls are sampled randomly, and where a randomly selected call includes an FSG element it can be assessed on that basis (see supporting docs in control report annex). It is possible to 'drop' specific calls into call coach so that FSG calls can be reviewed specifically where required, this is a line management decision.

# Page 53 -

• Recommendation 4 Action 4(2) c. Refresher training we receive now is not whole day training, and as mentioned before is on watch training.

Was full day originally, is now on watch. The course lasts about 4 hours and is designed to be in line with FSC 10/93 so includes a presentation by FS on building types and fire behaviour plus call handling of FSG presentation and finishes with a role play.

• Action 4(3) I am not aware of any Supervisor courses? Most supervisors have been included in leadership courses with operational staff some years ago, but I am not aware of any Supervisor courses being introduced.

There is a supervisors course. It was rolled out to new supervisors at end of 2010. To date three supervisors have completed as so far as only theses three have been promoted in that time. It is not a requirement for require substantive supervisors to attend this course as they should have completed most of those courses which make up the new supervisor course as part of their on-going training, it is available to them but is not mandatory.

Thanks Scott, it answered quite a lot.

There's still one issue that I have (others may have more). According to the report there should be 14 staff at GVP which the Report then divides into 1xCC, 2xSCO, 6x call takers, 1x paging operator and 3x radio operator = 13!

Can you clarify for me what the 14th person did?

Can you please reply all as I will be I the Authority meeting today.

Thanks a lot Tom

My reference: 7678

From: HAYWARD, SCOTT Sent: 07 February 2013 06:11 To: DAVIES, THOMAS (LEGAL) Subject: RE: Control Report

Morning Tom,

Some further clarification on training for control.

Whether the supervisor training, if needed, should be rolled out to all staff? We currently do not complete supervisor training with all staff as CROs do not carryout Supervisor functions. If the existing substantive supervisors were in post before 2010 they would have completed an assessment centre and gained the relevant experience on watch. They maintain their competencies by carrying out a supervisory role each tour. Before 2010, in recent years, any substantive Supervisors had to complete a development folder within a specific time frame. T/Sups could also complete one but it was invalid after 2 years. The Sup course established in 2010 as

designed for new sups not existing sups.

Can you let me know what the new supervisor training consists of, what elements the substantive supervisors will already have covered and give a bit more detail why it isn't given to all supervisors as a matter of course or whether it is something that you think we should do? Most supervisor training is on watch when gaining experience in this role. We can provide specific lessons such as mass—decon on request. Currently there are training packages available to all Control staff covering specific lessons which are all up to date. We can provide the supervisor course TNA (Copy attached)—which outlines the areas supervisors should be concentrating on and their Operations Manager's are responsible for signing off the different elements.

We need some clarity about what refresher training takes place. Is it every other year all day (with role play and fire safety officers) and the other year computer based on watch? A Management decision was made that trainers and an FS Officer would provide training every other year, as with this year. In between, staff will access the information we have made available which we then validate with role play. Next year staff will access the Knowledge Centre and complete the CBT packages. Just to confirm, the first FSG training in 2010 was a full days training, 2011 staff accessed PowerPoint presentations and we validated with role play, 2012 Trainers and a FS Officer provided half a days training. 2013 staff will complete the online CBT packages.

I'm afraid they are still not clear about the situation. We've told the Coroner in the report that it is full day training, if it isn't we need to have a detailed answer why we've modified this position and precisely what the position re training is now. It was assessed and agreed by the training Manager that refresher training did not need to take a full day. To utilise the on watch training allocation the training took place from 1400hrs to 1800hrs. When we started the training in 2010 the training itself took 7hrs including lunch and breaks. The training has just been condensed into the time frame allocated and not so much time has been to the subject on 'difficult calls' Mock FSG calls are also recorded and played back to the trainee's to identify shortfalls in the delivery of the call.

Hi Chris/Nikki, A couple of issues have been raised which we will need answers to in case the Coroner wants to question any of these points:

1. Whether the supervisor training, if needed, should be rolled out to all staff? We currently do not complete supervisor training with all staff as CROs do not carryout Supervisor functions. Unless CROs were to carryout Supervisor functions on a regular basis they would more than likely forget these procedures. They would need to keep up there competencies in this area in order for the training to be effective. We feel it would not be appropriate due to the structure of the room, there is a division between operator and supervisor functions.

Can you let me know what the new supervisor training consists of, what elements the substantive supervisors will already have covered and give a bit more detail why it isn't given to all supervisors as a matter of course or whether it is something that you think we should do? Most supervisor training is on watch when gaining experience in this role. We can provide specific lessons such as mass decon on request. Currently there are training packages available to all Control staff covering specific lessons which are all up to date. We can provide the supervisor course TNA (Copy attached) which outlines the areas supervisors should be concentrating on however we can not monitor their progress. OMs are responsible for signing off the different elements. We agree that all supervisors should be given development in this role but this would have to be done on watch with assistance from trainers for lesson based training.

2. We need some clarity about what refresher training takes place. Is it every other year all day (with role play and fire safety officers) and the other year computer based on watch? A Management decision was made that Trainers and an FS Officer would provide training every other year, as with this year. In between staff will access the information we have made available which we then validate with role play. Next year staff will access the Knowledge Centre and complete the CBT packages. Just to confirm, the first FSG training in 2010 was a full days training, 2011 staff accessed PowerPoint presentations and we validated with role play, 2012 Trainers and a FS Officer provided half a days training. 2013 staff will complete the online CBT packages.

I'm afraid they are still not clear about the situation. We've told the Coroner in the report that it is full day training, if it isn't we need to have a detailed answer why we've modified this position and precisely what the position re training is now. It was a Management decision that refresher training did not need to be a full days training and could take place from 1400hrs to 1800hrs. This was to utilise the afternoon short shift and to prevent staff from being DD from watch.

We think training is one of the areas that the Coroner and the other parties are going to focus on, so the more information we have the stronger our stance will be.

As soon as possible please, but certainly by early tomorrow morning.

Subject: RE: Control Report

Ok to clarify - what I mean is that we did not produce a fantastic call and then an awful one so it was obvious. We wanted subtle differences. When we finished playing the calls we asked them - what do you think of each call and most people would say they were both good but one flowed better getting more information out of the caller. Then we went through them using the validation sheets we highlighted the differences re-enforcing important elements such as asking the caller if they can get out and if not why not ...

Hope this helps ...

Chris

To: BAGNELLE, VIC; OSHEA, NICOLA

Subject: RE: Control Report

Hi Vic

The form the role play element in the initial training, from my experience did not necessarily achieve what was

hoped. The feedback we received was that people were more concerned about making fools of themselves rather than actually benefitting from the exercise. We also did role play after the computer based refresher training in 2011. This was conducted on a one to one basis by either me or Nikki or Supervisors. Role play is an inexact way of validating training as you cannot replicate the same conditions and cover the same information each time as it is done by different trainers/supervisors.

I approached Lindsay about changing the approach for this last session of training and recorded 2 mock calls by me and Nikki for the staff to listen to and assess. The recordings were not examples of a very good call verses a bad one. There were some differences, most notably not checking if the caller could get out and why not on one of them. We also discussed the difference between one call where Nikki followed the RIF when speaking to the caller and the other she did not and only used our script. The Operators commented that the flow of the call was better when using the RIF; emphasising our message about using it every time. We supplied an assessment sheet for them to fill out when the calls were played and we went through them afterwards comparing the content. We used the RIF as a reference point for the validation sheet. Each session was taken very seriously and the feedback was positive. The staff expressed the view that they could concentrate on what was actually said and reflect on how they would approach such a call. It is agreed that the Operators job, ideally, in a FSG call is to concentrate on the caller whilst Supervisors are ensuring the mobilising and information flow is done. Having experienced doing the role play, as stated before, operators were more worried about the mechanics of mobilising which in some cases outweighed the benefits. When we were running the initial training a lot of discussion took place during the day about the forthcoming role play and how people were worried about it. I honestly believe that this had, in some cases, a detrimental effect on the whole day's training. There was one operator who refused to do it and had to do it at a later stage by me with kid gloves. It was suggested by management at the time that the more we do the role play the less worried people would be about it but of course we need to have that opportunity to do it during the year.

The approach we took this time in my view is role play. Nikki and me role played and the staff assessed it and were engaged in the process and were able to maintain a consistent approach throughout training.

The best form of role play has been demonstrated when we did the FSG exercise in the room. It was in context and the whole watch was involved.

Further traffic!

Whether the supervisor training, if needed, should be rolled out to all staff? We currently do not complete supervisor training with all staff as CROs do not carryout Supervisor functions. Unless CROs were to carryout Supervisor functions on a regular basis they would more than likely forget these procedures. They would need to keep up there competencies in this area in order for the training to be effective. We feel it would not be appropriate due to the structure of the room, there is a division between operator and supervisor functions.

Sorry to be a pain, I think they are asking why substantive AOM's do not do the Supervisor course which we established in 2010? If they were substantive before 2010 they would have completed an assessment centre and gained experienced on watch in which case they are considered competent in their role. They maintain their competencies by carrying out a supervisory role each tour. If there are any issues with a substantive supervisor it would be down to the OM to highlight this and request our assistance if necessary. Before 2010, in recent years, any

substantive Supervisors had to complete a development folder within a specific time frame. T/Sups could also complete one but it was invalid after 2 years. The Sup course established in 2010 as designed for new sups not existing sups.
Can you let me know what the new supervisor training consists of, what elements the substantive supervisors will already have covered and give a bit more detail why it isn't given to all supervisors as a matter of course or whether it is something that you think we should do? Most supervisor training is on watch when gaining experience in this role. We can provide specific lessons such as mass decon on request. Currently there are training packages available to all Control staff covering specific lessons which are all up to date. We can provide the supervisor course TNA (Copy attached) which outlines the areas supervisors should be concentrating on however we can not monitor their progress. OMs are responsible for signing off the different elements. We agree that all supervisors should be given development in this role but this would have to be done on watch with assistance from trainers for lesson based training.
We need some clarity about what refresher training takes place. Is it every other year all day (with role play and fire safety officers) and the other year computer based on watch? A Management decision was made that Trainers and an FS Officer would provide training every other year, as with this year. In between staff will access the information we have made available which we then validate with role play. Next year staff will access the Knowledge Centre and complete the CBT packages. Just to confirm, the first FSG training in 2010 was a full days training, 2011 staff accessed PowerPoint presentations and we validated with role play, 2012 Trainers and a FS Officer provided half a days training. 2013 staff will complete the online CBT packages.
I'm afraid they are still not clear about the situation. We've told the Coroner in the report that it is full day training, if it isn't we need to have a detailed answer why we've modified this position and precisely what the position re training is now. It was a Management decision that refresher training did not need to be a full days training and could take place from 1400hrs to 1800hrs. This was to utilise the afternoon short shift and to prevent staff from being DD from watch. Yes but why? Did we refine the training to enable us to deliver the days training in 4 hours? Are the staff getting the same training they received when we used the full day, is it more intense for example? Can you be a little more specific please? When we started the training in 2010 the training itself took 7hrs including a lunch break. It was agreed that a full day was required and staff were DD from watch to allow this to happen. We were not able to DD people for the current training therefore were directed by Management to use the slot between 1400 and 1800hrs to complete it. There is not enough staff on duty from 0800hrs to 1400hrs to allow training to take place before 1400hrs. The training that we have just conducted has not changed from the initial training in 2010 i.e. the content of the presentations. The difference in the training we have just completed this time included a brief discussion on difficult calls compared to the 1hr 30mins covered in the original training. Also, instead of staff completing individual role play, we recorded mock calls and staff listened and assessed the content of each call.

BAGNELLE, VIC[vic.bagnelle@london-fire.gov.uk]

Thanks Vic, I agree this should have been picked up before the report was submitted and we all had the opportunity to review the report before it went to the Coroner. I would have picked it up, had I been sighted on the change to the training, but I wasn't! Regardless we as a managerial team have been caught out, hopefully it will not come up in court, but if it does it is going to be difficult to mask over the fact that we have said one thing and

I have had discussion about role play before and I find the mitigation of worried staff a weak excuse for not carrying out the training as detailed in the Government training documentation that we are stating we abide by. I have carried out training in both environments, roleplay and passive roleplay. Roleplay has the impact that the passive one don't.

Chris is not a supporter of roleplay, that is very clear, but documentation and audit state the contrary and until there is a change to those documents I suggest we follow them. Not only that Vic but it wasn't ratified at our meetings and therefore we did not all have the information available to us.

Perhaps we can discuss the way forward at our next meeting.

Subject: Re: Control Report Sensitivity: Confidential

Hi Scott.

Included below is some text from Chris explaining how we arrived at the point we are now.

The essential point to hold on to here is that the training we deliver must be effective. We have learned lots about our training delivery on this subject, year upon year, as we have moved along. The training team have taken guidance from senior managers as they have developed what we deliver, before I took up my post, and not freelanced but worked with the resources and capabilities available to us departmentally. Release of staff for whole day courses was much easier when we had many more staff to play with, two years ago, than we have now. The method of delivery in afternoon sessions was the most effective in our present circumstances, and I can say from my personal experience (I attended one of the full training sessions) that it was very useful.

I think it should also be borne in mind that we will now be programming regular FSG exercises that will provide more effective role play experience for staff than that we attempted previously.

I think it is fair to say that the terms used by Nikki in her response did not do justice to the training set up delivered.

Chris's text now.

"The form the role play element in the initial training, from my experience did not necessarily achieve what was hoped. The feedback we received was that people were more concerned about making fools of themselves rather than actually benefiting from the exercise. We also did role play after the computer based refresher training in 2011. This was conducted on a one to one basis by either me or Nikki or Supervisors. Role play is an inexact way of validating training as you cannot replicate the same conditions and cover the same information each time as it is done by different trainers/supervisors.

I approached Lindsay about changing the approach for this last session of training and recorded 2 mock (role played) calls by me and Nikki for the staff to listen to and assess. The recordings were not simply examples of a very good call versus a bad one. There were some differences, most notably 'not checking if the caller could get out' and 'why they couldn't get out' on one of them. We also discussed the difference between one call where Nikki followed the RIF when speaking to the caller and the other she did not and simply using our script. The Operators commented that the flow of the call was better when using the RIF; emphasising our message about using it every time. We supplied an assessment sheet for them to fill out when the calls were played and we went through them afterwards comparing the content. We used the RIF as a reference point for the validation sheet. Each session was taken very seriously and the feedback was positive. The staff expressed the view that they could concentrate on what was actually said and reflect on how they would approach such a call. It is agreed that the Operators job, ideally, in a FSG call is to concentrate on the caller whilst Supervisors are ensuring the mobilising and information flow is done. Having experienced doing the role play, as stated before, operators were more worried about the mechanics of mobilising which in some cases outweighed the benefits. When we were running the initial training a lot of discussion took place during the day about the forthcoming role play and how people were worried about it. I honestly believe that this had, in some cases, a detrimental effect on the whole day's training. There was one operator who refused to do it and had to do it at a later stage by me with kid gloves. It was suggested by management at the time that the more we do the role play the less worried people would be about it but of course we need to have that opportunity to do it during the year.

The approach we took this time in my view is role play. Nikki and me role played and the staff assessed it and were engaged in the process and were able to maintain a consistent approach throughout training.

The best form of role play has been demonstrated when we did the FSG exercise in the room. It was in context and the whole watch was involved."

Our training must progress and improve as we go along and at the same time be something that we can deliver within our resources effectively to achieve the desired outcome... Skilled staff able to respond to FSG situations in the best way possible.

I hope this helps Scott. Sorry Dave laid into you but perhaps we should've picked up on this report point before it was submitted.

Happy to discuss if you wish.
Regards
Vic

Morning Vic,
Can you let me know who managerially changed the role play element of the FSG? This is a fundamental part of the training to confirm understanding and was highlighted in the training audit and directed by the original FSG training. Listening to mock calls as stated by Nikki is not what we expected.
I would like role play to be introduced into our training as a matter of course and not skipped over because the staff are uncomfortable with it.
Thanks
Scott

Further traffic!

Whether the supervisor training, if needed, should be rolled out to all staff? We currently do not complete supervisor training with all staff as CROs do not carryout Supervisor functions. Unless CROs were to carryout Supervisor functions on a regular basis they would more than likely forget these procedures. They would need to keep up there competencies in this area in order for the training to be effective. We feel it would not be appropriate due to the structure of the room, there is a division between operator and supervisor functions.

Sorry to be a pain, I think they are asking why substantive AOM's do not do the Supervisor course which we established in 2010? If they were substantive before 2010 they would have completed an assessment centre and gained experienced on watch in which case they are considered competent in their role. They maintain their competencies by carrying out a supervisory role each tour. If there are any issues with a substantive supervisor it would be down to the OM to highlight this and request our assistance if necessary. Before 2010, in recent years, any substantive Supervisors had to complete a development folder within a specific time frame. T/Sups could also complete one but it was invalid after 2 years. The Sup course established in 2010 as designed for new sups not existing sups.

Can you let me know what the new supervisor training consists of, what elements the substantive supervisors will already have covered and give a bit more detail why it isn't given to all supervisors as a matter of course or whether it is something that you think we should do? Most supervisor training is on watch when gaining experience in this role. We can provide specific lessons such as mass decon on request. Currently there are training packages available to all Control staff covering specific lessons which are all up to date. We can provide the supervisor course TNA (Copy attached) which outlines the areas supervisors should be concentrating on however we can not monitor their progress. OMs are responsible for signing off the different elements. We agree that all supervisors should be given development in this role but this would have to be done on watch with assistance from trainers for lesson based training.
We need some clarity about what refresher training takes place. Is it every other year all day (with role play and fire safety officers ) and the other year computer based on watch? A Management decision was made that Trainers and an FS Officer would provide training every other year, as with this year. In between staff will access the information we have made available which we then validate with role play. Next year staff will access the Knowledge Centre and complete the CBT packages. Just to confirm, the first FSG training in 2010 was a full days training, 2011 staff accessed PowerPoint presentations and we validated with role play, 2012 Trainers and a FS Officer provided half a days training. 2013 staff will complete the online CBT packages.
I'm afraid they are still not clear about the situation. We've told the Coroner in the report that it is full day training, if it isn't we need to have a detailed answer—why we've modified this position and precisely what the position re training is now. It was a Management decision that refresher training did not need to be—a full days training and could take place from 1400hrs to 1800hrs. This was to utilise the afternoon short shift and to prevent staff from being DD from—watch. Yes but why? Did we refine the training to enable us to deliver the days training in 4 hours? Are the staff getting the same training they received—when we used the full day, is it more intense for example? Can you be a little more specific please? When we started the training in 2010 the training itself took 7hrs including a lunch break. It was agreed that a full day was required and staff were DD from watch to allow this to happen. We were not able to DD people for the current training therefore were directed by Management to use the slot between 1400 and 1800hrs to complete it. There is not enough staff on duty from 0800hrs to 1400hrs to allow training to take place before 1400hrs. The training that we have just conducted has not changed from the initial training in 2010 i.e. the content of the presentations. The difference in the training we have just completed this time included a brief discussion on difficult calls compared to the 1hr 30mins covered in the original training. Also, instead of staff completing individual role play, we recorded mock calls and staff listened and assessed the content of each call.

Morning Vic,

I have just had my arse kicked about the length of the full FSG training.

In the report we say it is a full day and yet we have just carried out the training in four hours with no roleplay!

Dave was very unhappy and made it very clear to me. It makes us look unprofessional in court.

I appreciate that you have just picked this up but we need tighter control of the trainers and not let them freelance as they have appeared to have done on this occasion.

Can we discuss it at our next meeting.

**Thanks**

Hi Vic,
TH VIC,
Can I just clarify a few points with you and the training team by Midday Monday please:
4. Con a lateral control to the City de la Control to C
1. Can you let me know when the full day refresher training was changed to on watch?
The full days training was only the first year we did it i.e. 2010. The next training was on watch in 2011 as it was
going through the pp presentations and then a short role play with either me and Nikki or a Supervisor. Of course this
year was on watch
2. A Management decision was made that trainers and an FS Officer would provide training every other year, as
with this year, can you let me know when this was and the grounds for the decision?
The management decision was taken by Control Management and I was told by Lindsay that it would alternate each
year between Trainer led training and CBT packages.
In preparation for this years training (2012) Lindsay was directed by Scott to inform me that it must directly reflect
the original training i.e. the pp presentations and FS input and not deviate. The differences were that we had a much
shorter difficult calls session and we assessed the role play recordings.
Thanks

Sent: 11 February 2013 13:36 To: BAGNELLE, VIC; @MER OST Subject: RE: Control Report

Hi Vic

As per our conversation I am starting work on the TNA.

I have consulted OM Natalie Bagnelle to confirm working practices for the administration Module and await an update.

I am also checking the validity and appropriateness of the courses now we have moved on a couple years and Babcock run the courses.

Following this research I will circulate the TNA to all Supervisors.

With regard to the 2nd paragraph on Refresher Training I am concerned that this last tranche of training was not considered a full days training as opposed to Staff refreshing themselves by using either the pp presentations or CBT. As this has not been considered sufficient training this time I note that the expectation is that we will conduct another set of Trainer led/FS training later this year.

I have the following concerns:

- We have already completed Trainer led/FS training in 2012
- We will not have sufficient Trainers available to conduct the training whilst we are conducting Fortek/Capita training

We will not have appropriate training facilities to conduct the FS refresher as we will have positions surrounding the Control room installed with the legacy system. The FS refresher training is an interactive team activity not contusive to be conducted in the Main Control Room. The idea was to use these positions if we needed to introduce new procedures prior to the installation of Fortek and not for a major training exercise as this. The original plan was to use the CBT material in 2013 which can be accessed from any position in the Control as this is an individual training session.  Regards  Chris

Cc: CUTBILL, TIM (DAC); HAYWARD, SCOTT

Subject: Control Report

Importance: High

Tom,

I have read the e-mail below, and have discussed the issues with Scott. As a result I have laid out below (a) what I see as our position with regards the hearing on Tuesday and also (b) what our position will be going forward in terms of the points raised.

# Supervisor Training

Currently, we do not supply supervisor training for all Control Officers, as only those Control Officers who have successfully completed a supervisory assessment centre will ever carry out supervisory functions. All newly promoted Supervisory Managers will receive full training as part of their development programme.

For clarification, in addition to all newly promoted Supervisory Managers, all those successful at the supervisory management assessment centre (but not yet promoted) will receive full training. I have also instructed the management team in Brigade Control to carry out a Training Needs Analysis (TNA) of (a) all Control Officers who have successfully completed a supervisory management assessment centre, regardless of when that assessment was and what training they may have already received; and (b) all substantive AOMs, regardless of when they were promoted to AOM and what training they may have already received.

The TNA will determine the level of proficiency of each relevant member of staff against every element of the supervisors course and note whether they have previously received any training in that area and whether any further training is required. If no training has been received, or skill levels are such that retraining is required, then that training is to be arranged as a matter of urgency.

All relevant members of staff are to receive Leadership Training regardless.

Each TNA is to be recorded and placed on file.

# Refresher Training

We need to be clear that there is now refresher training every year, but we also need to accept that the duration has differed. The details are listed below:

- A full days training was given in 2010 where I am informed that records show we trained 108 staff.
- A half days training was given in 2011. The reason this was a half day is due to the amount of resources required for a full days training year-on-year, and how this needed to be balanced with other training commitments as well as workload in Control. In 2011 I am informed that records show we trained 106 staff using a PowerPoint

presentation, validated with role play. Future half days training sessions will involve a CBT package. NB. This CBT package would have been used in 2011 but had not yet been fully developed.

 $\cdot$  A full days training was intended to be delivered in 2012 but pressures of Olympic planning meant a half days training was provided, but using the same format as in 2010 i.e. a FS Officer.

In future, training will consist of alternate full days training (as specified in the report) and half day CBT packages. Therefore, in 2013, a full days training will be delivered and in 2014 a half day CBT package, then in 2015 a full day and so on...

Please contact me for any further details.
