Planning Application Display

The revised planning application will soon be available for you to view in the project room next to the Grenfell Tower reception.

This display will be up throughout the planning application period.

An update on the Grenfell Tower regeneration project:

We have been working with the proposed contractors, Leadbitters, and our design team to develop and agree the detailed design, scope of works and costs.

This has taken longer to complete than we originally anticipated, however, it is very important that we plan properly to ensure that the proposed works offer value for money and meet the aspirations of residents and the Council.

Design Update

Proposed priorities for the refurbishment of Grenfell include:

- A new, efficient heating system
- New double glazed windows
- External cladding to improve energy efficiency
- Development of additional residential homes
- Improved external environment & communal spaces

We consulted residents in October 2012 before the planning application was submitted and Planners have asked us to review some aspects of the design and to submit a new application.

We have now developed revised designs and will consult with residents on the finalized design before a new planning application is made.

We are proposing to hold a drop in session on 17th June at Grenfell Tower for residents to meet the Project Team and give feedback on the revised design before it is submitted to planning.
