Subject: Requesting urgent Fire Risk Assessments reports in relation to newly exposed gas pipe throughout the building and the staircases at Grenfell Tower, Grenfell Road W11

Dear Collette O'Hara

Fire Safety inspecting Officer

London Fire Brigade

Please find forwarded email we the "Grenfell Tower leaseholders' association" at Grenfell Tower, Grenfell Road London W11 sent to the Head of the KCTMO and the RBKC.

Please see attached pictures for your kind inspection and urgent attention.

This is to confirm that some of the resident at Grenfell Tower so scared that they are having a panic attack due to this exposed gas pipe in the building. As you may know in the past almost over six years ago, from your record that there was a fire broke out dated 30th April 2010 and there was an injury to the residents as well.

Could you please as a matter of urgency to visit the Grenfell Tower and provide us the health and safety report and its paramount important that, the building is safe from fire risk hazard?

So far we didn't get any confirmation from the KCTMO or from our landlord the RBKC that this exposed gas pipe has to "NO" risk to fire hazard and health and safety of the residents of Grenfell Tower wasn't compromised.

We wait to hear from you as a matter of urgency.

Best Wishes

Tunde Awoderu

The Vice chair of Grenfell Tower Leaseholders' Association.

Dear Millicent Williams,

Thank you for your email and taking notes of the contents.

Let me categorically confirm that to you and the leaderships of the KCTMO and also I am referring to my earlier email dated 7th March 2017, this attached exposed gas pipe throughout the building has put our life in danger and we don't feel secure in the building anymore.

The leaderships of the KCTMO **MUST** find immediate remedy to the serious concerns and secure the building by tonight.

If you feel we are overstating our claim of "Health and safety", concerns we request the KCTMO to invite the independent adjudicator to investigate the gas pipe immediately.

Again the extract from our earlier email dated 7th March 2017 for the information and convenience of the recipients of this email.

"Could you please kindly provide us the proof or evidences that anywhere at RBKC or in London or in the United Kingdom that gas pipe line exposed such a manner and installed beside the staircase(only fire escape) where there is no air can escape whatsoever. And more importantly the staircase of Grenfell Tower is the main breeding ground and where the vandalism and antisocial are daily occurrences. This newly installed exposed gas pipe line is easy target of vandalism and one incident can have serious catastrophic consequence for the whole building.

Could you please kindly provide us the health and safety certificate authorised that the KCTMO or the National Grid that they obtained permission before installing the gas pipe going through the entire staircases of the Building?"

Please read comments send to us from one of the resident of this building:

"I'm absolutely shocked by the dodgy work and the risk to the building. I walked up the communal stairs tonight and I'm surprised that there is not even protection. If there was a gas leak on one of those pipes and someone was smoking that would be the end of the building"

This is quite scary and not truth but **fact** of the matter and sometime "hardest things to find in this world something is in front of us".

We demand that the KCTMO must made this building secure and give assurance that the building is secure by tonight before everybody goes to bed.

We wait to hear from you and the leaderships of the KCTMO not in due course but **NOW**.

Best wishes

Tunde Awoderu

The vice chair of Grenfell Tower leaseholders' association
