## Crime statistics

Based on data released by local police, the area around Lancaster West Estate has a crime rate which is much lower than the regional average. This seems to suggest that this is a safe place in which to live but we would still recommend you visit the area to get a sense for yourself.

### Total crime

171 total crimes in the last year

171

24% below regional average

Of the 71 crimes investigated over the last 12 months, offenders were found guilty (or otherwise) and received a range of punishments in 22% of cases (compared to the regional average of 20%).

Of all the investigations in the past 12 months, 77% were either unresolved or resulted in what might be deemed an unsatisfactory solution for the person reporting the crime. That includes situations where the police took no further action, were unable to prosecute the suspect or a court case collapsing (perhaps due to lack of evidence or a missing witness).

The remaining crimes investigated by the police are yet to receive an outcome - typically due to an upcoming court case or pending further investigation.

It may surprise you to see quite a low percentage of crimes resolved, but this reflects - amongst other reasons - the difficulty local police have in investigating 'minor' crimes.

### Burglary and Theft

38 instances of burglary and theft crimes in the last year

38

48% below regional average

Burglary and theft covers a wide range of disparate crimes, including but not limited to burglary, robbery, vehicle crime, shoplifting and other forms of theft.

The data we have suggests that the local area has a much lower rate of burglary and theft than the regional average, with a total of 38 burglaries taking place in the past year.

We would caution you to view these statistics with the wider area in mind, however. Often, 'nice' areas can have high crime rates for burglary and theft precisely because they present an affluent target for opportunistic thieves. At the other end of the scale, more impoverished areas sometimes don't have high statistics for theft because crime is focussed on more prosperous areas in the locality.

Given the figures we have provided, we certainly don't recommend any panic or concern. Instead, we'd advise you to investigate further and to take sensible precautions like any careful owner would, should you be interested in this area. These precautions might include signing up to a neighbourhood watch scheme, installing appropriate locks on doors and windows, or fitting a burglar alarm if you remain concerned.

### Anti-social behaviour

60 instances of anti-social behaviour in the last year

60

13% below regional average

There was a total of 60 instances of antisocial behaviour reported, which is slightly lower than the regional average.

This could be an indication that there are isolated problems resulting either from people living in the local area, or the type of premises found within reach of the property. It's impossible to say for sure, of course, but we'd recommend conducting further checks (perhaps looking at the 'Noise and Nuisances' section of our site) to see if there are any places nearby which might be attractive antisocial behaviour.

### Violent and Drugs crime

62 crimes in the last year

62

1% above regional average

The data we have available shows that for the past year there were 62 crimes falling into the above categories, which for the size and population of the area is slightly higher than the regional average.
