1	Monday, 1 March 2021	1		We were discussing together your role in the
2	(10.00 am)	2		classification in September 2015 of the 2005
3	SIR MARTIN MOORE—BICK: Good morning, everyone. Welcome to	3		Kingspan K15 insulation. Can we look next, please, at
4	today's hearing. Today we're going to continue hearing	4		the email {KIN00004791}. This is an email from
5	evidence from Mr Stephen Howard, who, at the time with	5		Ivor Meredith to David Hoare and Sarah Colwell on
6	which we are concerned, was employed by the BRE.	6		30 May 2005, and he explains who's going to be at the
7	So my first task is just to make sure that Mr Howard	7		test the next day. He identifies himself and others
8	can see me and hear me and the rest of us clearly.	8		from Kingspan.
9	Mr Howard, good morning.	9		Then if you go a little bit lower down the email,
10	MR STEPHEN HOWARD (continued)	10		you can see, about two—thirds of the way down, it says:
11	THE WITNESS: Good morning, I can hear you and see you	11		"COSHH data will follow in the morning for the
12	clearly .	12		Kooltherm K15 and the 6mm cement board that simulates
13	SIR MARTIN MOORE—BICK: Good, thank you very much.	13		the cladding."
14	Before we resume taking your evidence, let me just	14		Can you see that?
15	remind you that the procedure will be essentially as it	15	۸	I can, yes.
16	was last week on Thursday. But we had better begin with	16		Would you agree that that description, using the word
17	a little bit of housekeeping: can you confirm that	17	Q.	"simulates", indicates that the cement board was not
18	you're on your own in the room from which you're giving	18		truly representative of rainscreen cladding, at least so
19	your evidence?	19		far as Mr Meredith thought?
20	THE WITNESS: I am on my own.	20	۸	Well, that's the first time I've seen that email, but on
21	SIR MARTIN MOORE—BICK: Thank you.	21	A.	the basis of what's been said there, then yes, I would
22	Can you confirm that you don't have any documents or	22		
	other materials with you?	23		conclude that they considered that not to be $$ that they were simulating the cladding system.
23 24	THE WITNESS: No.	24	^	Yes.
25		25	Q.	
23	SIR MARTIN MOORE–BICK: Can you also confirm that your	23		Can we look at BS 8414 briefly, just so that we're

Questions from COUNSEL TO THE INQUIRY (continued) MR MILLETT: Thank you very much, Mr Chairman, good morning, good morning, members of the panel, and good morning, Mr Howard.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22		clear about what's required. This is at {CEL00001205/5}, please. Let's look together at paragraph 2.1, "external cladding system", and this sits within the part of BS 8414—1:2002 which is the terms and the definitions. 2.1 says, "external cladding system", and it's defined as: "[A] complete cladding assembly, including, for example, sheeting rails, fixings, cavities, insulation and weathering membranes or coatings." If you look a little bit further down under "Principle", section 3, it says: "The external cladding system is applied to a vertical external masonry surface simulating the external face of a building in the form of a main face together with a return wing." Again, you see the word "simulating" there. Then under paragraph 4.1.1 on page 6 {CEL00001205/6}, it says under "General" under "Test facility": "The test apparatus shall be representative of the face of a building and shall consist of a masonry, or
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	mobile phone is in another room and that you don't have any other electronic device with you which is capable of receiving messages? THE WITNESS: I don't have any electronic devices that are capable of receiving —— SIR MARTIN MOORE—BICK: Very good, thank you very much. As last week, your legal representatives are in the virtual hearing room, although they know that they must keep their microphones and cameras switched off unless an emergency requires them to intervene. Anything that you would like to raise before we start? THE WITNESS: No, I'm fine, thanks. SIR MARTIN MOORE—BICK: All right, thank you. Well, we'll have the usual break at about 11.15. At this point, I'll ask Mr Millett to continue putting questions to you. Thank you very much. When you're ready, Mr Millett, thank you. Questions from COUNSEL TO THE INQUIRY (continued) MR MILLETT: Thank you very much, Mr Chairman, good morning, good morning, members of the panel, and good morning,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21		clear about what's required. This is at {CEL00001205/5}, please. Let's look together at paragraph 2.1, "external cladding system", and this sits within the part of BS 8414—1:2002 which is the terms and the definitions. 2.1 says, "external cladding system", and it's defined as: "[A] complete cladding assembly, including, for example, sheeting rails, fixings, cavities, insulation and weathering membranes or coatings." If you look a little bit further down under "Principle", section 3, it says: "The external cladding system is applied to a vertical external masonry surface simulating the external face of a building in the form of a main face together with a return wing." Again, you see the word "simulating" there. Then under paragraph 4.1.1 on page 6 {CEL00001205/6}, it says under "General" under "Test facility": "The test apparatus shall be representative of the

25

at one side of the main test wall."

Q. Thank you.

2		under "General", it says:	2	"Question: Right.
3		"The external cladding system shall include all	3	"Answer: Obviously this wasn't supposed to be
4		relevant components assembled and installed in	4	a cladding system, this was just supposed to be
5		accordance with the manufacturer's instructions."	5	representative of a non-combustible outer layer."
6		Now, when you did your classification report for	6	That's what he says. He explains that a little bit
7		Kingspan in September 2015, were you familiar with these	7	further on at $\{Day75/59:4\}$, if we can just go back to
8		requirements in the BS 8414-1 standard from 2005?	8	page 59. He says:
9	Α.	Yes.	9	" although the BRE had suggested that if we test
10	Q.	As at that date, had you ever come across a cementitious	10	with a non-combustible cladding, we will be acceptable
11		particle board used in the real world as a rainscreen	11	for use with all non-combustible cladding systems."
12		cladding panel on a high—rise?	12	Then he says at {Day75/63:17}, a little bit further
13	Α.	I believe I'd come across cement—based boards on	13	on, and this is the question:
14		cladding systems, yes.	14	"Question: So the discussion that you thought might
15	Q.	Cement—based boards on cladding systems in general,	15	have been with Sarah Colwell about being able to
16		perhaps, but my question was a cementitious particle	16	extrapolate from this test might have been with
17		board. No more, no less than that. As described,	17	Philip Hoare?
18		cementitious particle board; had you ever come across	18	"Answer: David Hoare, yes.
19		one of those used in the real world on a rainscreen	19	"Question: Sorry, David Hoare."
20		cladding panel on a high—rise building?	20	Then he goes $$ and this is the final piece I' II
21	A.	I can't recall, but as I said, cement—based boards are	21	show you $$ {Day75/70:10}, the question is:
22		quite common on cladding systems.	22	"Question: So would you accept that, as
23	Q.	On high—rise cladding systems?	23	constructed, it wasn't representative of a real life,
24	Α.	Yes.	24	real world cladding system at that time?
25	Q.	Had you ever come across one in real life used above	25	"Answer: No, we were looking just to put
		5		7
1		18 metres?	1	a non-combustible layer on the outside, so it could be
2	Α.	Cement-based boards, but not specifically of that	2	extrapolated by the BRE to apply to many non-combustible
3		description, no.	3	outer layers, or any non—combustible outer layer.
4	Q.	No.	4	"Question: I see.
5		Now, looking at Mr Heath's witness statement, can	5	"You began that answer with 'no'; did you in fact
6		we, please, I'll show you what he said. If we can go to	6	mean yes? The question I put to you was:
7		{KIN00020709/72}, please, paragraph 11.11 at the bottom	7	"'So would you accept that, as constructed, it

25

use?

report?

A. Yes.

6

So that's what he said, but I now want to show you

"Question: And when you say 'a non-combustible

the selected panels as being representative of

what Mr Meredith says, and the transcript for his

evidence to the Inquiry is at $\{\text{Day}75/69\},$ please.

He is asked by leading counsel at line 16:

board that was available', available to who, in what

 ${\sf non-combustible\ cladding\ panels."}$

Then at 5.1, if we go to page 9 {CEL00001205/9},

A. Because my view at the time is that what you are testing $$8\,$$

test, how could you justify issuing a classification

Q. Yes. So in the light of the fact that the cladding

was not to represent an actual cladding system but to be

used as the basis for extrapolating systems for multiple

system was simply supposed to be representative in that

"Answer: That you could buy in the UK market.

2.3

2.4

I was aware at the time that cement—based boards were being installed and being used in buildings over 18 metres, and it was on that basis that there is a test report available, and the test report is quite clear on what was installed, that a pass/fail statement against that system could be issued.

Q. In that last answer you say, "If the product sits within the scope of BS 8414". I just want to follow that up just a little bit more.

I've shown you the language quite carefully within the text of BS 8414-1 from the time of the test. Given those passages I've shown you, do you accept that you were required to consider whether or not the external wall arrangement as tested in 2005 was a complete system representative of a system which would be applied to the external face of a building in the real world?

A. Well, as I said, the report was a full BS 8414 report, and that's what I based my decision on. I think in light of emails and evidence that's come to light since,

25 which I wasn't aware of, then that is an area that

- 1 I would probably reconsider.
- 2 Q. Could you not tell at the time you did your 3 classification report that the cementitious particle board as described as the outer layer in the list of 5 components, without any further elaboration, at least pointed in the direction of the fact that this was not 6 7 a representative rainscreen system in accordance with 8 BS 8414-1 which applied at the time?
- 9 A. Sorry, I -- as I said, there are boarding systems --10 there's non-combustible boards, there's non-combustible 11 systems, there's cement-based boards that go out on the 12 external façade systems. It didn't strike me that that 13 was particularly unusual.
- 14 Q. Given that you're testing a system, a whole system 15 comprising a number of separate components, did you 16 undertake an investigation to make sure that each of 17 those components, including the material forming the 18 rainscreen in the test, was one that was being used in 19 the real world?
- 2.0 A. Well, we're not system designers, and most testing, or 21 almost all testing, is approached from the way of: you 2.2 are testing what is supplied. If it's within the scope 23 of the standard -- and I do accept the point that you're 2.4 making, that that forms a basis of what a fire test 25 laboratory does.

1 Q. But you say you're testing what is supplied if it's

2 within the scope of the standard, and what I'm 3 suggesting to you is that, in order to be within the

4 scope of the standard and therefore qualify for a test,

5 it has to be a full system, each component of which

corresponds to a product or material being used in the 6

real world on real cladding systems above 18 metres; do

8 you accept that?

9 A. Well, I think I've answered that the position I was in

10 at the time and the knowledge I had at the time was

11 cement-based boards were being used on high-rise. So to 12

be presented with a test report, full test report, that 13 says. "It's a cement—based board" and for a pass/fail

14 statement to be issued against that, at the time

15 I didn't see that as a problem.

16 Q. But you see, Mr Howard, cement-based board or

17 cementitious particle board is a generic description.

18 and my question, one more time, is: why didn't you

19 undertake any specific investigations to work out what

2.0 the cementitious particle board actually was so as to

21 satisfy yourself that it was a material being used in

22 the real world in accordance with the demands of the

23 standard?

2.4 Because as I said, it gets back to this issue that most 2.5 testing or the vast majority of testing is based on what

11

1 you are being supplied and what your client, in terms of

2 fire testing, submits. Now, if that product is within

3 the scope of the standard, and that test report is not

very different to what was submitted later on had been

5 tested or had been tested previously, then I would not

6 have questioned it.

7 Q. But you would only know if it's within the standard if 8

you undertake the relevant investigations to make sure

9 you know what it is; no?

10 A. Well, as I said, it was as a cement-based particle

11 board. I was issuing a classification which is

12 a pass/fail statement against the test report. The

13 description was there.

2.0

2.2

14 Q. But it was only a generic description; it wasn't

15 an identification of a particular product or any more

16 accurate than that, was it?

17 A. No, it was a generic description.

18 Q. And you couldn't therefore tell from the generic

19 description whether it did sit within 8414 or not, could

you, without further investigation?

2.1 A. Well, as I said, that specific board, no. I couldn't

tell, but cement-based boards and cement-based boards

23 are common on cladding systems.

2.4 Q. Now, did you ask Kingspan why they hadn't sought

25 a classification for a decade until they asked in 2015?

10

- 1 A. I don't think I did directly, but there was an exchange of emails, and I think in one of those emails it just 2 3 said it hadn't come up or hadn't been requested or had
- 4 been overlooked or something along those lines.
- 5 Q. Is there a reason why you didn't ask Kingspan the direct question: why do you want a classification report 6 ten years after the test?
- 8 A. No, because you need to separate -- if you're requested
- 9 that sort of paperwork or a test report or a contract,
- 10 you're not asking why they need it. It is a process in
- 11 place. If I thought it was legitimate to issue
- 12 a classification report against the test report, how 13 that is being used doesn't factor into that.
- 14 Q. Does it not? Were you not interested in why it was that 15 Kingspan waited ten years and then suddenly asked you
- 16 for a classification report?
- A. No, I think the -- I took the explanation at face value 17
- 18 that they had not needed it and they were -- it was now
- 19 something that they were looking to source for that 20
- 21 Q. Were you ever told in specific terms why Kingspan were 2.2 now seeking this report, having not asked for ten years?
- 2.3 A. Sorry. I missed that.
- 2.4 Q. Were you ever told why Kingspan were now seeking this 25 report, not having asked for one for ten years?

- 1 A. Sorry, when you start your sentence, I think I'm overtalking to you. I'm not catching the first couple 2
- 3 of words of the sentence, I'm sorry.
- Q. No, I'm sorry, I think that may be my fault. Let me ask 5
- Were you ever told in specific terms why Kingspan 6 7 were now seeking this report, not having asked for it 8 for ten years?
- 9 A. No

16

17

18

19

2.0

21

2.2

2.3

2.4

25

- 10 Q. Did the fact that a decade had passed since the BS 8414 11 test had been carried out cause you any concern?
- 12 A. No, not in particular.
- 13 Q. Can I ask you to look at your witness statement at page 56, please, paragraph 245 {BRE00005771/56}. You 14 15 sav there:
 - "For my part, I did not see how BRE could refuse to provide a classification report. Test reports, such as Test Report 220876, do not have a validity period or expiry date. For testing contracts, there is no ongoing review of the system or component parts; as such, test reports are a statement of fact (essentially a snapshot in time). Mr Baker's concern, as set out in Ms Gaubsaite's email above, related to the composition of the test system rather than the age of the report or

its validity. In this respect, however, as Test Report 14

- 220876 itself [says] ...
- 2 "'Test results relate only to the items tested. We
- 3 have no responsibility for the design, materials,
- 4 workmanship or performance of the product or items
- 5 tested. This report does not constitute an approval. certification or endorsement of the product tested."" 6
- 7 Then you refer to section 3 of the report as well.
- 8 Was the fact -- this is my question, having shown 9 you that -- that there was no explicit validity period
- 10 or expiry date your only consideration?
- 11

1

- 12 Q. What other considerations did you give --
- 13 A. Whether the test report was a full test report or
- 14 whether the test report had been issued as
- 15 an indicative, and whether the tested performance was 16 within BR 135 limits
- 17 Q. Was it normal for clients to come back to you and ask
- 18 for a classification report a decade after the test.
- 19 having been selling the product over that period?
- 20 A. No, it's not normal.
- 2.1 Q. Given that it wasn't normal, why did you not ask
- 22 questions about why they wanted it?
- 2.3 A. Because it's not -- if procedurally I believe that we
- 2.4 could do it, then there was nothing to invalidate the
- 25 test report, there was nothing to invalidate the test

- data, test reports are a snapshot in time and the
- 2 classification is just a pass/fail statement against the
- 3 test. On that basis, it's not ongoing approval, we're
- not looking for revalidation; we are reporting: this
- 5 system met these criteria $\,--\,$ this system as described in
- 6 the test report met this criteria on the day, and that 7
 - was my approach.
- 8 Q. Did you ask yourself: I wonder why they want this now?
- 9 I can't really recall . I think I probably would have
- 10 questioned it, but you often get requests that are
- 11 coming from third parties to complete contractual
- 12 arrangements and things like that. It's not something
- 13 we really delve into, because it's got to be a black and
- 14 white issue of whether the process that you're
- 15 undertaking is permitted or allowed, or -- it's not
- 16 a case of the reason for the client wishing for
- 17 something or their motivation would change that, that's
- 18 not the approach I take.
- 19 Q. Given that you say you probably would have questioned it
- 2.0 yourself, which was my question, did you not have any
- 21 suspicions about what it was that Kingspan were seeking
- 2.2 to do with the report?
- 23
- 24 Q. Can we go to $\{BRE00002511\}$, please. That is the test
- 2.5 report issued on 8 December 2005 for the test carried

out on 31 May 2005 under BS 8414-1. This is the first 1 2 page, just to refresh your memory of it. It's dated 3 8 December 2005, and it's done under part 1, as you can 4 see Yes?

A. Yes.

25

Q. Let's go to page 4 {BRE00002511/4}, and let's look at the third paragraph together. It says there, in the third paragraph under "Introduction":

"The specification and interpretation of fire test methods is the subject of ongoing development and refinement. Changes in associated legislation may also occur. For these reasons it is recommended that the relevance of test reports over 5 years old should be considered by the user. The laboratory that issued the report will be able to offer, on behalf of the legal owner, a review of the procedures adopted for a particular test to ensure that they are consistent with current practices, and if required may endorse the

Now, you say at paragraph 58 of your witness statement, if we can just flip to that, please, page 13 {BRE00005771/13}, about this paragraph:

"My understanding is that the above phrase ..."

And the "above phrase" is contained in the question, "the relevance of test and classification reports over

17

five years old should be considered by the user":

" ... was generated by the Fire Test Study Group (which BRE is a member of) and that it was designed to draw the user's attention to the possibility that the relevant standard may have been revised or updated, or that the regulations referring to a particular standard may have changed."

Can I then take you, having shown you that, to Mr Clark's witness statement at page 16. That's $\{BRE00005768/16\}$, paragraph 67. He says, in response to the same question, as you can see in Q2(s) above it:

"My understanding of the reasons for this recommendation is that the end user was being warned to consider carefully any changes that might have occurred over that time period, in terms of the manufacturing process, changes in legislation, change of ownership or other aspects that might render the information in the report unreliable.'

Do you agree with what he says there? A. Not via that statement. There are caveats or warnings in the test report, but that one in particular just refers a user to validity of the test report in terms of legislation. There's other statements in the test report that basically say, "We're not -- there is no ongoing monitoring, there's no approvals", and things of

18

that nature.

2 Q. When you -

3 A. In a test, it's a one-off contract.

4 Q. When you say, "Not via that statement", do you mean the statement in the question, the relevance of test and 5

6 classification reports?

7 A. Yes, I think there's other warnings in the report that 8 refer to the manufacturing process. I think the 9 Fire Test Study Group refers specifically to the changes

10 in legislation.

11 Q. So just in general terms, do you agree with Mr Clark --12 I'm afraid it's disappeared from the screen, but I can 13 ask you anyway -- when he says that the user should

14 consider the relevance of test and classification

15 reports which are more than five years old because the

16 manufacturing process may have changed?

17 A. But the -- but you are totally in the hands of the 18 manufacturer or the test sponsor with any samples that

19 are supplied. So manufacturing processes can change the

20 day after you have tested a product or they can remain

2.1 the same for decades. There are warnings in the report

22 that basically draw the user's attention to that. Test

23 reports are just a snapshot in time of a record of

2.4 a specific test.

1

2.5 Indeed, and what Mr Clark is saying is that one of the

19

reasons why you have to consider the relevance of a test

report that's more than five years old is because the 2

3 manufacturing process of the material being tested might

have changed since then. That's something that he says 5

you should consider. Do you agree?

6 A. No, I think you should consider it immediately. It's

7 not on the basis $\ensuremath{--}$ after five years. That is the point

8 that I'm trying to make. A test report is a snapshot in 9 time, so you need to consider that immediately. It's

10 within the hands of the test sponsor or the manufacturer

11 that —— they are in control of that.

12 Q. Did you ask Kingspan whether the product had changed

13 since it was tested in 2005 when you came to classify it

based on the test done in 2005 in 2015? 14

15 A. No. because that's not —— doesn't form part of the

process of the test and classification . It's outside

17 the scope of your test and classification.

18 Q. Well, it's not outside the scope of what the BRE was

19 itself warning in its own classification report, was it?

2.0 A. Sorry, as I said, those are standard statements in --21 a lot of the caveats in the report are across BRE, but

2.2 some of the specific ones from the Fire Test Study Group

23 are in specific reports. The issue is that you are

2.4 totally in the hands of the test sponsor or the

2.5 manufacturer to ensure that the products that are

20

8

- continued that are tested remain so. If they change the product in the intervening time, whether it's five years, whether it's five months, whether they remain the same after 20—plus years, is outside the hands of a test laboratory.
- 6 Q. When you come to classify it ten years on, was it not 7 incumbent on you at least to ask the question: is this 8 the same K15 I'm classifying today that was tested in 9 2005?
- $\begin{array}{lll} 10 & \text{A. No, because I didn't} & --\text{I would have thought that if} \\ 11 & \text{changes were being made to K15, there would have been} \\ 12 & \text{a programme of re-tests to do that. I was on the} \\ 13 & \text{understanding that, in essence, the K15 was the same} \\ 14 & \text{that we were dealing with back in 2005 as it is now.} \\ \end{array}$
- 15 Q. Why not just check?
- A. Because, as I said, it's outside the scope of your
 testing. You're not doing an ongoing check on
 the manufacturing process. You are (inaudible)
 third—party approval, but not the test report and the
 classification report is a snapshot in time.
- Q. Can we go to {BRE00005837/79}, please. This is
 Fire Test Study Group (UK) resolution 72. Am I right,
 this is what you refer to in your witness statement at
 paragraph 58?
- 25 A. This is where I understand the statements come to. I'm

21

- 1 not particularly familiar with this document.
- 2 Q. You mean where the statements come from?
- 3 A. Sorry, yes

6

7

8

9

10

11

12

13

14

15

16

17

18

19

2.0

21

2.2

23

2.4

25

Q. You're not familiar with the document. Let's look at
 it, then, together.

It's resolution 72, "A Cautionary Statement to be Added to Test Reports", agreed by the executive, if you look a little lower down, on 6 October 1993, and implemented on 1 December 1993, and it was still valid as at the date of this document. It says:

"REASON

"Since fire tests are the subject of a continuing standardisation process, and because existing standards are the subject of review and possible amendment and new interpretations, it is recommended that reports should be considered by the user to ensure that the methodology adopted and the results obtained remain valid.

"The objective of the review is to ensure that the marketplace remains equitable by preventing manufacturers with very old or inadequate test reports from competing on equal terms with those who have tested in accordance with later, possibly more onerous procedures."

Then there is the resolution that's set out there, and in fact it appears on page $80 \text{ } \{BRE00005837/80\},$

22

1 about what should go into reports. I don't think I need 2 to show you that.

Do you know whether that resolution, resolution 72, was still extant as at 2005?

- Was still extant as at 2005:
 A. Sorry, I'm not sure I quite understand your question.
 Of that I'm pretty sure that that was in the reports
 - at that time and was something that BRE had agreed to for inclusion in the reports in certain technical areas.
- 9 Q. Was it still valid as at 2015, when you came to do your 10 classification report?
- 11 A. The document was still in place, so in terms of
- 12 validity, that I don't believe has been withdrawn, no, 13 so that statement is still there.
- so that statement is still there.

 14 Q. Now, the test report that you issued on
- 28 September 2015 was under BS 8414—1:2002, wasn't it?
- 16 A Yeah
- 17 Q. Did you classify to the British Standards prevailing at
- 18 the time of the test in 2005 or to those prevailing at
- 19 the time of your classification in September 2015?
- 20 A. I can't, without seeing the actual classification
- 21 report -- is it possible to see that? I would have
- thought it would have been against the 2002 version.
- $23\,$ $\,$ Q. Well, I'm asking you for your recollection , but we can
- 24 certainly do that. If you go to {KIN00000134}, you can
- see that that's your report.

23

- $1 \quad \text{A. If you $--$ can we go down, please?} \\$
- 2 Q. Where do you want to go to?
- 3 A. It would be about the third page in.
- 4 Q. Certainly, let's go to page 3 {KIN00000134/3}.
- 5 A. We're currently on 2.
- 6 Q. Go down again. I'm on page 3, but is that what you're
- 7 looking for? Page 4 $\{KIN00000134/4\}$, perhaps,
- 8 "Classification of fire performance in accordance with
- 9 BR 135:2013 Annex A"?
- $10\,$ $\,$ A. Well, in answer to the question, that classification was
- 11 issued against the standard that the system was tested
- 12 to, which was 2002.
- 13 Q. 2002 standard, but there was a revision, do you
- remember, to the British Standard in the April of 2015?
- Did you use the revised standard or did you use --
- 16 A. (inaudible) 2002.
- 17 Q. Right.
- Let's go to page 9 $\{KIN00000134/9\}$, and if you look
- 19 at page 9, this is "Test results", can you see? Under
 - "Test results" you can see a column, second from the
- 21 left , "Parameter"; yes?
- 22 A. Yeah

2.0

2.4

- 23 Q. And on the left-hand column, "Test method & test
 - number". Under test method and number, you have
- 25 BS 8414—1:2002; yes?

- 1
- 2 Q. And under "Parameters" you have got four parameters:
- 3 "External fire spread.
- 4 "Cavity behind rainscreen (cavity 1)
- "Internal fire spread, Insulation layer." 5
- And then the bottom one: 6
- 7 "Internal fire spread, Burn through."
- 8 Do you see that?
- 9 A. Yes
- 10 Q. Then you've got results in the right-hand block. The
 - "Fire spread test result time" are all greater than
- 12 15 minutes, and the results are all compliant in each of 13 these four boxes; yes? Do you see that?
- 14

- 15 Q. Did you put that into this report? When I say "that",
- 16 I mean these test results
- A. No, I would have thought it would have been Vida who --17
- 18 Q. Under your supervision?
- 19 A. Yes
- 20 Q. I see. Do you know where she got the internal
- 2.1 fire spread burn-through parameter from?
- 22 A. Er ... I don't, but that's not applicable to a part 1 2.3 test.
- 2.4 Q. That's my next point. You're right. So, given that
- 25 it's not applicable to a part 1 test, what's it doing

25

- 1 there?
- A. That has been a mistake. 2.
- 3 Q. Did you review this classification report in --
- 5 Q. — (inaudible) Vida?
- A. Yes. 6
- 7 Q. Did you review this page?
- 8 A. Yes.
- 9 Q. How can you account for the fact that it contains
- 10 burn-through data which applies only to a part 2 test
- 11 and not a part 1 test, as I think you'll agree?
- 12 A. It was an oversight on my part. I --
- ${\sf Q}.\;\;{\sf How\;can}\;{\sf --}\;\;{\sf sorry},\;{\sf I}\;\;{\sf interrupted}\;\;{\sf you}.\;\;{\sf We\;spoke}\;\;{\sf over\;each}\;\;$ 13 other. Did you want to finish your answer? 14
- 15 A. I was just going to say, yeah, I've made a mistake, that 16 shouldn't have gone out like that.
- Q. I'd like to understand how that mistake could have come 17
- 18 about. Clearly you didn't review this page carefully
- 19 enough to see that a parameter applicable only to
- 2.0 a part 2 test had found its way into a part 1 test
- 21 classification . had vou?
- 2.2 A. No.
- Q. Can you account for how Vida may have made that mistake? 23
- 24 A. No, I can't, really. I think it's inexperience.
 - Q. Did she cut it and paste it, do you think, from a part 2

26

- test classification report?
- 2 A. Yes, or the actual base document that you used was
- 3 potentially a part 2 test report -- classification
- 4 report.

8

9

21

- 5 Q. How could she possibly have told that the test produced
- compliant data for burn-through when it would not have 6
- 7 produced any data for burn-through at all?
 - A. Because in the -- there would be a statement of burn-through in a part 2 test. So, in essence, if it
- 10 burns through, the system would have been reported that
- 11 it would have burnt through.
- 12 But not for a part 1 test?
- 13 No. not usually
- 14 Q. Therefore she was putting in to this report data which
- 15 had never been produced by the part 1 test done in 2005,
- 16 do vou agree?
- 17 A. A statement has gone in which is not addressed or not
- 18 actually required by the part 1 test, that's correct.
- 19 Q. And therefore would it follow that Vida's conclusion
- 20 that the data for burn-through was compliant with the
 - parameters in annex B was completely unfounded?
- 22 A. Well, it's not completely unfounded, because it's not
- a requirement of part 1, so that's not something we 23
- 2.4 measure. What's actually gone into the report is
- 25 a statement that is accurate that is not required.

27

- 1 Q. How did you know or how did she know it was accurate if
- 2 there was no burn-through data in the 2005 test?
- 3 A. Because in the -- because you're sat on a masonry wall,
- quite heavy blockwork wall. The requirement that is the
- 5 reason for that statement on a part 2 test is the
- 6 lightness of proper construction. So there is a risk of
- 7 burn-through on the lighter test, but the heavier tests
- 8 or the part 1 tests were on a masonry wall, so that is
- 9 assumed to comply.
- 10 Q. In fact, Mr Howard, if you look at the results box, it
- 11 says, "Compliance with parameters in Annex B
- 12 BR135:2013". Could you tell me what relevance annex B
- has to a test done under BS 8414-1? 13
- A. It should be annex A. That's a mistake that's gone 14
- 15 through.

18

- Q. That's quite a mistake, isn't it? Because the whole 16
- 17 purpose of a classification report is to classify the
 - tests done in accordance with the BS 8414 methodology to

- 19 the criteria in BR 135. This classification report
- 2.0 applies a whole set of wrong criteria, doesn't it?
- 21 A. Well, there's one state -- well, it's referred to the
- 2.2 wrong annex and it's included a statement of additional
- 23 tests and additional assessment that isn't applied to 2.4 part 1. What it doesn't -- it's not saying it has
- 2.5 passed something that it hasn't. What it's saying is

1 this isn't a factor that you report on in part 12 systems 3 SIR MARTIN MOORE-BICK: Forgive my intervening, Mr Millett, 4 but there is something I would just like to clarify . 5 Mr Howard, did the original test data for the 6 8414 test contain any readings for burn-through? 7 SIR MARTIN MOORE-BICK: Well, then -- go on, sorry. 8 9 A. But, as I said, it's on a masonry wall, so there is no 10 requirement in the standard to report that. SIR MARTIN MOORE-BICK: No, but if the test did not contain 11 12 any data for burn-through, how can Ms Gaubsaite have put 13 in a result in the BR 135 assessment? A. Because it will be a positive -- it will be a -- in 14 15 either the part $1\,--$ sorry, in a part 2 report, if you 16 had burn-through, then that would be reported. 17 Okay, is it possible to rephrase the question?

18 SIR MARTIN MOORE-BICK: Well, at the moment I don't

19 understand how anyone could include a reading for 20 burn-through unless the test on which the document is 2.1 based contained some data for burn-through. That's my 22 problem. Can you help me?

A. Well, as I said, I think it was a mistake that's been 2.3 2.4 included. When you report on a part 2 test and you have 25 burn-through, you would report, if it's burnt through,

1 that it has done so in a particular time. If that 2 statement's absent, then you would classify against 3

SIR MARTIN MOORE-BICK: All right. Thank you very much.

Yes, Mr Millett.

MR MILLETT: Yes. 6

> As authors of BR 135, did you ask Tony Baker or Sarah Colwell for a view about whether you should be producing a classification report ten years after the

11 A. No.

5

7

8

9

10

12 Q. Why is that?

13 A. Because, as I've explained, it was a procedural issue. 14 Test reports are a snapshot in time. The 15 classification, in my view, was just a pass/fail or is 16 just a pass/fail statement against the test report.

17 Q. Did you not consider it at the time at least to be best 18 practice for tests to be repeated every five years?

19 A. No. There is no requirement to do that, across the 2.0 test -- you're not running an approval scheme. Your 21 contracts are one-offs, all of them.

2.2 Q. No, I understand that, but my question was: did you 23 consider it to be best practice for manufacturers to 2.4 repeat tests every five years?

25 A. No. The system across Europe is similar. It's all

based -- there's large numbers of products on the market 2

that are based on one-off tests, one-off classification

3 reports, and that is a mechanism for them to place their

products legally on the market. There's large numbers 4 5 of products on the market that are never re-tested, huge

numbers. 6

9

15

17

7 Q. Given that, as you told us, you realised that this was 8 unusual, it's unusual for a manufacturer to ask for

a classification report ten years after the test, I have

10 to suggest to you that you should have asked them why 11 they were doing it. Do you accept that?

12 No. because I'm not sure -- unless -- for what --

13 I could not see a reason not to issue the classification

14 report, and that is -- we are not monitoring the market

in that way. As I said, there's vast numbers of

16 products on the market that are based on one-off tests

and one-off classification documents. It's not

18 an unusual circumstance at all for a test lab.

19 Q. Given that this test was done a lot longer ago than the

20 five -year recommended cut-off period, I have to suggest

21 to you that it was inappropriate just to continue to

22 classify this report without asking Kingspan why they

2.3 needed it. Do you accept that?

2.4 No. As I said, procedurally, if we can issue

25 a classification report, we're not -- fire test labs are

31

1 not regulatory bodies. If it was within -- if there was

2 technical reasons or whatever not to issue it, then

3 fine. But from a procedural point of view, my view was

a classification report is a snapshot in time, it's

a report on a test.

6 Q. Was there any reason why you couldn't have put a clear

7 caveat or warning on the face of this classification

8 report to draw the reader's attention to the fact that

9 the test had been done ten years ago?

10 A. No, there's no reason that -- and in other -- there's no

11 reason why we couldn't have put a clear caveat on the

12

5

Q. Why didn't you do that? 13

A. I think in hindsight, we probably should have. 14

Q. I'd like to turn to a different topic, which is the 15 16 BRE's relationship with Kingspan.

Now, Mr Clark told the Inquiry in his evidence on 17

18 Day 96 that you had a good relationship with Kingspan.

19 That's $\{Day96/189:24-25\}$. There is no need to go to

2.0 that, but is that correct? Would you agree with him?

2.1 A. Yes, BRE had a good relationship with Kingspan.

2.2 Q. Can we go to {BRE00003531}, please. This is an email

23 sent by Ivor Meredith to you and Phil Clark on

2.4 20 March 2014, copied to Steve Manchester, subject

2.5 "Kingspan BS 8414 Test", and this is the day after

30

1 Kingspan's test on 19 March to BS 8414-2 on K15 with 2 a Trespa HPL rainscreen.

> Now, we've looked at this in some detail with Mr Clark, and we will come back later to look at it together, Mr Howard. I just want to look at the email for a moment.

Can you see that in the first paragraph Mr Meredith is asking you and Mr Clark for confirmation of the test result; yes?

10 A. Yes.

3

4

5

6

7

8

9

13

14

15

16

17

2.1

11 Q. Yes. Let's go to the fourth paragraph down, please, which begins with the word "Phil", and he says: 12

> "Phil, I will get Astec in on Monday to start stripping out. I would like to be [there] to witness what was going on behind the cladding. Although I assume you will be taking lots of pictures of that that

18 "Also can you make any unofficial comments with 19 regards the falling debris this time compared to the 2.0 previous test?"

Do you remember that email?

- 2.2 A. I don't recall it. no.
- 2.3 Q. You don't recall it; do you recall perhaps at all what 2.4 Mr Meredith meant by "unofficial comments"?
- 25 A. No, I'm not clear what he would have been asking as

- 1 unofficial comments, really.
- Q. Did Mr Clark, to your recollection, provide any 2. 3 unofficial comments to Mr Meredith as he had requested?
- 4 A. Not that I'm aware.

results of tests?

- 5 Q. Did you?
- 6 A. No.

14

- 7 Q. Did you or Mr Clark answer Mr Meredith's request for 8 unofficial comments that he's asked for in this email?
- 9 A. No. I mean, everything on email — no. I wouldn't — 10 we wouldn't have provided unofficial comments.
- 11 Q. You say that. Is that right? Were you or anybody else 12 at the BRE in the habit of giving official and unofficial, online and offline, comments about the 13
- A. All I can say is I didn't provide any unofficial 15 16 comments to Ivor on that subject.
- 17 Q. Would you agree with me this far, that at least looking 18 at this email, it looks as if Mr Meredith certainly 19
- thought that the position was that Mr Clark might be 2.0 prepared to offer an unofficial opinion?
- 21 A. Yes, there's a request in there to make unofficial 2.2 comments, but that doesn't mean ... as I said, I'm not 23 aware of any unofficial comments being made to Ivor
- 2.4 from -- well, I didn't make any, and I'm not aware of
- 25 anybody else making unofficial comments back to

- Kingspan.
- 2 Q. No, my question is really: how did you think Mr Meredith
- 3 came by the understanding that Mr Clark or you might
- 4 give him unofficial comments as he'd asked for?
- A. I'm not sure that I know the answer to that. I mean. 5
- it's a statement in an email, it's one word in an email, 6
- 7 and as I said. I'm not sure how —— I don't know how Ivo 8 would have come to that conclusion.
- 9 Q. Did you yourself go back to Mr Meredith and tell him
- 10 that the BRE did not provide unofficial comments that he
- 11 had asked for?
- 12 No. I'm pretty sure I didn't.
- 13 Did you discuss Mr Meredith's request with Mr Clark?
- 14 Sorry, I missed that.
- 15 Did you discuss Mr Meredith's request with Mr Clark?
- 16 A. No, I don't recall doing that.
- 17 Q. Did you not tell Mr Clark to go back to Mr Meredith and
- 18 tell him that he shouldn't be asking for unofficial
- 19

21

- 20 A. I don't believe that I responded in that way, no. Not
 - to -- because it wasn't practice -- I don't understand
- 22 what is meant by unofficial comments. You either go on
- 2.3 record, and that can be verbal or via email, what would 2.4 be unofficial ?
- 2.5

Q. Why didn't you go back to him, therefore, and ask him

- 1 what he meant by unofficial comments and tell him that
- 2 you don't provide those?
- 3 A. Maybe the email was missed. I don't really recall that
- email. I don't recall what proceeded after that point,
- 5

10

- 6 Q. Mr Clark told us -- and only for the record, this is
- 7 $\{{\sf Day96/188:1-7}\}$ -- that he didn't correct Mr Meredith in

so, because you and Mr Manchester were senior to him.

- 8 his understanding as appears from this email, but he
- 9 said that was because it wasn't within his remit to do
- 11 Now, is it right or is it fair that Mr Clark would
- 12 have expected you to respond, as the senior officer, to
- 13 Mr Meredith's request for unofficial comments?
- A. No, I think all staff members are required to report 14
- 15 inappropriate responses or requests from manufacturers.
- 16 It's whether that -- I mean, Ivor had a certain way of
- writing emails and containing stuff within them. It's 17
- 18 whether it really flagged up as an inappropriate
- 19 situation which required a response. All staff have
- 2.0 a duty and a requirement to report if they're feeling --
- 21 if they're being put in a compromising position.
- 2.2 Did you not think it important at the time that at least
- 23 somebody, whether you or Mr Clark, should respond to
- 2.4 Mr Meredith's request and tell him that you weren't
- 25 prepared to offer unofficial comments?

8

9

- A. I can't recall reading that email in that sort of level of detail. I can't recall the email, so I can't really say what I was thinking at the time.
- Q. You see, on the face of the documents that we've got, we've got a request for unofficial comments and no response either from you or Mr Clark. The absence of a response would tend to suggest that unofficial comments were something that you were either prepared to give him or at least not prepared to resist . Is that fair?
- 11 A. No, because, as I said, any comments that you make would 12 be on the record, because they would have to be via 13 verbal or email and I would expect there would be some evidence of that sort of behaviour going on. As I said, 14 15 Ivor is ... well, has certain wording in emails that I don't -- that, looking back, we should have responded 16 17 to, but we didn't at the time. As I said, I don't 18 really remember that email in detail ... it's hard to 19 comment, really.

20 Q. Right.

1

2

3

4

5

6

7

8

9

10

21 Let's go to {BRE00018859}, please. It's an email 22 chain between you and Ivor Meredith in April 2015 now. If we go to page 2 {BRE00018859/2}, halfway down that 2.3 2.4 email chain, we can see the first email in the chain is 25 sent to you and Phil Clark on 8 April 2015 at 8.30 in

- 1 the morning. Can you see that?
- 2. A. Yeah

5

6

7

8

13

14

15

3 Q. He says in the first paragraph there:

"We would like to incorporate some additional thermocouple in at level 1 (so we can understand when it fails) Phil had a suggestion so we could understand exactly what's going on at the lower levels . Perhaps some below and above the fire [barrier] in the insulation and void??'

9 10 Do you see that?

11 First of all, do you recall seeing this email?

12 A. Not specifically, no, but it's ... yeah.

- Q. Do you recall thinking at the time that it was inappropriate for Mr Clark to be making suggestions of this kind to a test sponsor?
- 16 A. It did —— I wasn't party to that conversation, but to 17 add additional instrumentation during tests is not 18 uncommon. So unless I knew the context, ie Ivor was 19 asking, "Where could we possibly put thermocouples to 2.0 get above and below the barrier", I wouldn't know, but 21 it's not uncommon to add additional instrumentation into 2.2 tests across the board, or additional filming or
- 2.3
- 2.4 Q. Did you speak to Phil Clark or have a communication of 25 any other kind with him about his suggestion that this

email reflects?

- 2 A. No, I don't recall a conversation with him.
- 3 Q. Could we look at your response, please, the next day, if 4 we just scroll up, please. This is your response to Ivor Meredith, copied to Phil Clark, 9 April 2015 at 5 10.35, and in the last paragraph there you say: 6

"I take it you have sorted the additional instrumentation between you and Phil? (For the record, we shouldn't include in the report)."

10 Why did you write that?

11 A. Because it specifies what you should include in the 12 BS 8414 test, and if they wished for additional data to 13 be reported on, then that should be a different 14 document. It should have been a separate issue, 15 separate processing, separate checking, and issued 16 separately.

17 Q. If you had added thermocouples into the test rig, why 18 would you omit their presence from the test record?

A. Because the test -- well, the test standards are quite 19

2.0 specific as to what should be in there, so, on that 21

basis, it would be better to report additional 22

thermocouples at a -- separately. Now, we did change that later on to start including when you get requests 23

2.4 for other standards to be included in the part 2, 8414,

25 but at the time my view was that the test reports should

39

be in line with the standard and the data presented in

2 line with the standard, and if additional

3 instrumentation or measurements were being taken, they

should be reported separately for the sponsor's

5

- 6 Q. Would the addition of further thermocouples have had any 7 effect on the test performance?
- 8 A. No.

1

- 9 Q. If the additional data was not to go into the test 10 report, how were you planning to communicate it to 11
- 12 A. It would just probably have been a series of graphs and 13 a short letter and an Excel sheet, a spreadsheet.
- 14 Q. Right. But they wouldn't have formed part of the test
- 15 record. would they? 16 A. Yeah, should do. They just sat in the file . They would
- just sit in the file with the rest of the ... they would 17 18 be accessible, you could go back to them to see what was 19 done at the time. Because of the way your thermocouples 2.0 and your instrumentation works, you would see, we would

21 know it was there because it would all be on the same

2.2 test_record.

23 Q. Well, let's just look at the test standard.

2.4 Before I go to that, can I just be clear about what 25 you're saying. Are you saying that the test report

38

1		would basically have two clear parts to it: one done	1		Looking at Figure 2, can you see the five
2		exactly in accordance with the standard, and another set	2		thermocouples at level 1 on the front face and three on
3		of data which showed these additional thermocouples, so	3		the wing?
4		that the reader of the test report could tell exactly	4	Δ	Yes.
5		what had happened?	5		Let's just go to the 2015 version of this document,
6	Δ	Yeah.	6	ų.	which is at {BSI00000166/11}, and look at
7		That's what you're saying, is it? So that the formal	7		paragraph 5.6.2.2, again:
8	ų.	test report would identify the addition of extra	8		"External thermocouples at levels 1 and 2."
9		thermocouples not within the standard?	9		Again, you've got the stipulated number of five
10	Δ	No, probably not. If there are additional	10		locations under (a) and three locations under (b) for
11	Α.	thermocouples —— you could see it from the test record,	11		the main test wall face and wing wall respectively.
12		from the data that's generated in the test file , but you	12		Yes?
13		probably wouldn't include additional measurements that	13	۸	Yes.
14		are outside the scope of the standard within the formal	14		Looking at both of those, do you agree that there is no
15		test report.	15	Q.	room in either of the 2007 or the 2015 versions of
16	0	Right. So the additional measurements that are outside	16		BS 8414—1 for any discretion for the tester to add or
17	Q.	the scope of the standard would then have to be	17		subtract thermocouples at will?
18		communicated informally (inaudible) test report?	18	۸	I agree that you can't subtract, but I disagree with —
19	٨	Well, they'd still be communicated, but they'd still be	19	A.	on the basis of additional thermocouples.
20	Α.		20	^	•
21		communicated in a formal way with another — potentially	21	Q.	Where does it say in these standards that you can add
		with another project number or secondary project against	22		thermocouples to make six or seven at the front wall or
22		that initial one. There would be an email record of	23	^	10 on the wing wall, where does it say that?
23		them going out. As I said, it will be on the data set		Α.	Well, it doesn't, but BS 8414 and other tests are often
24	_	that you download from the loggers.	24		accepted in other parts of the world and the
25	Q.	I think you agree, but we'll clarify this by reference	25		jurisdictions in those parts of the world will request
		41			43
1		to the test standard, that additional thermocouples are	1		other instrumentation. Now, if we don't put the
2		not permitted within the BS 8414 test standard, are	2		additional instrumentation in, what you're effectively
3		they?	3		doing is having to double the $$ repeat the test to add
4	Α.	Well, I(?) don't specifically request them, no.	4		more instrumentation into the system, which is not
5	Q.	Well, let's have a look.	5		practical . We can't really do that.
6	A.	I don't think they specifically exclude them, but	6		And secondly, it's fairly common on fire test $B(?)$
7	Q.	Let's have a look. BS $8414-1$ is at {CEL00001205}. What	7		that ductwork or fire tests $$ sorry, fire doors,
8		I'm going to show you is the 2007 edition.	8		dampers, if additional instrumentation was required or
9		Let's go to page 6 in that $\{CEL00001205/6\}$, please,	9		additional videos or additional measurements are
10		at paragraph 4.2.2, under "External thermocouples",	10		required, for those to be undertaken if they don't
11		"General":	11		compromise the test.
12		"External thermocouples shall be positioned to a	12	Q.	But by adding thermocouples at these locations you're
13		tolerance of [plus or equal to] 10 mm with the hot	13		departing from the prescribed parameters of the test
14		junction positioned (50 [plus or equal to] 5) mm in	14		standard, aren't you?

front of the face of the system under investigation." Then 4.2.2.2: "External thermocouples at level 1, positioned:

 $^{\prime\prime}-$ on the main face of the façade, in positions on the centre line and at distances of 500 mm and 1,000 mm each side of the centre line (five locations)'

"— on the wing, at distances of 150 mm, 600 mm and 1,050 mm from the finished face of the cladding systems on the main face (three locations) (see Figure 2)."

Figure 2 you will find on page 8 {CEL00001205/8}, if we just go to that, please.

42

23 that you often offered to test sponsors? 24

nothing unusual.

I don't think it was offered, I just don't think any 2.5

A. Yes, but you're not changing the end result and, as

I said, it's common. You often put, across the

fire testing field, additional instrumentation or

additional cameras or \dots or at the request of the

consultant or a jurisdiction in another part of the

world. There's nothing uncommon about that. It's

request for additional information -- instrumentation or

Q. Was this flexibility in the test apparatus something

- 1 cameras would have -- would have been reviewed and if it 2
- was considered feasible we would do so. It doesn't --
- 3 Q. -- offered by Mr Clark --
- A. -- as I said, it's pretty common. Sorry, we're talking 4 5 over each other.
- Q. But it was offered, it was offered by Mr Clark, and my 6
- 7 question again: was it common for the BRE to make suggestions such as that which Mr Clark made, namely to 8
- 9 add thermocouples at level 1 or other additional
- 10 instrumentation outside the parameters of the test
- 11 methodology prescribed?
- A. I would say it wouldn't be offered, but it wasn't 12 13 uncommon to put additional instrumentation or cameras in
- 14 at the request of the client sponsor because they may be 15 submitting the test report to other parts of the world
- 16 that may need that data or for specific projects.
- 17 Q. Right. So it was not uncommon if the client sponsor
- 18 asked for it. but you say it wouldn't be offered by the 19
- 20 A. No, I think there would be a general understanding that 2.1
- if it was requested then we'd try to accommodate, but 22 you wouldn't -- if the request was to do an 8414 test,
- 2.3 that's what you were contracted to do.
- 2.4 Q. So when Phil Clark made the suggestion, am I right in 25
- thinking that that was unusual?

45

- 1 A. It's not something that I've come across personally as
- 2 to making suggestions to test sponsors as to put
- 3 additional instrumentation in, but it would depend on
- the content or contents of the discussion.
- 5 Q. Would any additional charge be levied on Kingspan for
- 6 using additional instrumentation outside the scope of 7 the methodology?
- 8 A. Potentially, depending on the level of work involved to 9 instrument.
- 10 Q. Would you agree that, in making the suggestion of adding 11 extra thermocouples at level 1, the BRE were providing 12 advice and suggestions to Kingspan?
- 13 A. It depends on the context in which that discussion took
- 14 place. I'm not clear on the actual exchange at the
- 15 time. It could -- the request could have been, "Can we
- 16 put thermocouples here", and we would have accepted
- 17 doing that. As long as it doesn't add considerably to
- 18 the cost and ... or compromise the test, I can't see
- 19 a reason why not.
- 2.0 Q. How would making that suggestion fit with BRE's duties 21 and obligations of impartiality?
- 2.2 A. But I don't understand why that's impartial, or not
- 23 impartial. It's addition of two or three temperature
- 2.4 measurements at a point to -- for the client to gain
- 25 more information about what's happening at a level ${\bf 1}$
 - 46

- cavity barrier. As I said, it depends on the context,
 - but it may have just been an agreement that we could put
- 3 thermocouples at that location, and as I said, that was 4 fairly common.
- Q. How could BRE remain impartial and yet be making 5 suggestions to a client about the addition of 6
 - thermocouples outside of that?
- A. As I said, I wasn't party to that conversation, so 8
- 9 I don't know the context. 10 Q. But on what you do know, do you agree with me that the
- 11 BRE was acting inconsistently with its obligations of
- 12 impartiality by making that suggestion?
- 13 A. No. as I said, additional instrumentation or cameras is
- 14 common. It's common in all the labs that were running,
- 15 all the fire labs that were ... I don't -- it's ...
- 16 $\mathsf{Q}.\;\;\mathsf{I}\;\;\mathsf{don't}\;\;\mathsf{think}\;\;\mathsf{you}\;\;\mathsf{have}\;\;\mathsf{understood}\;\;\mathsf{my}\;\;\mathsf{question}.\;\;\;\mathsf{I'II}\;\;\mathsf{put}\;\;$
- 17 it one more time. 18 Do you agree with me that, in making the suggestion,
- 19 the BRE was acting inconsistently with its obligations
- 20 of impartiality?
- 2.1 A. No, and I don't believe that we -- that is --
- 22 compromises our impartiality.
- 2.3 Q. Can we go, then, to --
- 2.4 SIR MARTIN MOORE-BICK: Mr Millett, before we do, could
- 2.5 I just raise something?

47

- Mr Howard, I'm getting the impression from your most
- recent answers that BRE regarded 8414 testing and maybe other testing as, in a sense, a collaborative exercise.
- 3
- 4 Would that be right? Collaborative in the sense of
- 5 collaboration between you and the customer.
- 6 A. Well, I'm not sure -- it's not a collaborative exercise,
- 7 but you were producing a test report or working for 8
- a test sponsor on that contract, so therefore there's 9 quite strict rules on the information that you pass on,
- 10 but you would provide assistance, but without
- 11 compromising your impartiality. So if they wanted
- 12 additional instrumentation put in -- as I said, this is
- 13 across the board, it isn't just 8414, it's ductwork
- 14 testing, it's fire doors, it's dampers. It's not viewed
- 15 in that way, it's not viewed as problematic.
- 16 So you would do it, and if a client requests
- 17 assistance to put extra instrumentation in, then we
- 18 would try to do that, and I can produce evidence of
- 19 other areas doing that if necessary.
- 2.0 SIR MARTIN MOORE-BICK: All right, thank you very much.
- 21 Yes, Mr Millett.

2.4

- 2.2 MR MILLETT: Mr Chairman, I'm just looking at the time, and
- 23 I was about to go to another document, so perhaps this
 - is a convenient moment.
- 25 SIR MARTIN MOORE-BICK: Yes, all right.

1	We will have our short break at this point,	1		"If anything is unclear please do not hesitate [to]
2	Mr Howard, and start again at 11.30, please, and I had	2		contact us."
3	better remind you, hadn't I, please, not to talk to	3		We can see the response to that which comes from
4	anyone about your evidence during the break. All right?	4		Adam Heath at Kingspan on 15 April, and he says, and
5	THE WITNESS: Thank you very much.	5		it's copied to Ivor Meredith and Gary Johnson:
6	SIR MARTIN MOORE-BICK: Thank you, we will see you a bit	6		"Dear Paul,
7	later on. Thank you.	7		"Many thanks for your recent enquiry. After
8	(11.17 am)	8		reviewing your facade query form it appears your
9	(A short break)	9		proposed detail is very similar to one of our tested
10	(11.30 am)	10		arrangements. Could I ask that you also send us over
11	SIR MARTIN MOORE-BICK: Welcome back, everyone. We're now	11		elevations and a section of the proposed detail for our
12	going back to Mr Howard, who is going to continue giving	12		information?
13	his evidence.	13		"Can you confirm which testing authority you are
14	Mr Howard, can you see me and hear me?	14		using and your contact there? We can then get in
15	THE WITNESS: I can see and hear you, thank you.	15		contact to approve the use of our test evidence."
16	SIR MARTIN MOORE-BICK: Thank you very much. I hope you're	16		Then on page 2 {BRE00003908/2}, if we just scroll up
17	ready to continue, are you?	17		a little bit further, we can see an email of 16 April
18	THE WITNESS: Yes, I am.	18		from Paul Dunphy back to Adam Heath, copying in
19	SIR MARTIN MOORE-BICK: Thank you very much.	19		Tom Lennon. Can you see?
20	When you are ready, Mr Millett.	20	A.	Yes.
21	MR MILLETT: Thank you, Mr Chairman.	21	Q.	Tom Lennon is BRE, isn't he?
22	Mr Howard, can we go to {BRE00003908/5}, please.	22	A.	Yes.
23	Now, this is page 5 within an email exchange in	23	Q.	Yes, and he says:
24	April 2005. Just to help you, if we can scroll, please,	24		"Adam,
25	to the bottom of page 4 {BRE00003908/4}, you can see	25		"Thanks for the email below please see the attached
				·
	49			51
1	what this is. It's an email from KIL—PB Techline	1		for our proposed details.
2	Enquiries, which is Kingspan, to somebody called	2		"With regard to the testing authority we are
3	Paul Dunphy on 13 April 2015, subject "FW: Kooltherm K15	3		proposing to use BRE and we have been in discussion with
4	enquiry". Paul Dunphy, just so you know, is	4		Tom Lennon (copied in and details below)
5	an architect working at Sheppard Robson Architects, and	5		"Tom Lennon.
6	it relates to a project called Barts Square.	6		"Principal Consultant.
7	You can see the enquiry on page 5 {BRE00003908/5},	7		"Fire Safety.
8	if we can just go back to that. It's a façade query	8		"BRE"
9	form, which is a standard form document generated by	9		There it is, and at the bottom he says:
10	Kingspan, and it's been filled in, can you see? And the	10		"Hope this helps but please do not hesitate to
11	insulation to be used is K15 there, with an outer face	11		contact me if you require any further information."
12	of James and Taylor terracotta rainscreen baguettes.	12		If we go up to page 1 {BRE00003908/1}, we can see
13	If we go up to page 3 {BRE00003908/3}, please, we	13		that there is a further response to this from
14	can see that there is a communication from Paul Dunphy	14		Tom Lennon, who writes to you on 20 April, copied to
15	on 13 April, and he asks a question to Kingspan:	15		Steve Manchester and Andy Russell, "FW: Barts Square",
16	"Kim,	16		and then he writes:
17	"As discussed we are currently in the process of	17		"Steve,
18	trying to commission a desktop study to see if your	18		"I know you have just gone off to Belgium but we
19	Kingspan K15 is acceptable for use within a rainscreen	19		need to come to a decision as to how we proceed with
20	cladding system at a height above 18m and are seeking	20		this as this will potentially be a huge source of income
21	written confirmation that you are willing to allow the	21		over the coming years but could also be a huge liability
22	testing authority to use your data in carrying out there	22		if not managed properly. We have to have some very
23	study.	23		clear rules about what does and does not constitute
24	"As you have requested please find the technical	24		reasonable grounds for an assessment/desk top study. We
25	information relating to the project below.	25		should also draw on available expertise in this area

5

1 within the Fire Safety Group."

You respond to that, as we can see from the top of the email run, at the top of page 1, on 20 April, copied to Steve Manchester and Andy Russell:

"Agreed.

"I have both testing and assessments flying in from all directions at present.

"Plus each test we generate seems to spawn further openings...

"I think the first job is to get handle on the number and scope of enquiries.'

Now. I've shown you the whole of that email run so you have the full context, but my question is: is it right that, at the time of the request for the classification report in respect of the 2005 test, which is of course mid-2015 to September 2015, Kingspan were in the process of carrying out a major testing programme at the BRE?

19 A. I can't remember the exact dates of when tests were 20 done, if -- there was quite a lot of cladding work going 2.1 on at the time, so there were test programmes going on, 22 but from a personal point of view, I had fire resistance 2.3 testing ongoing, cable testing ongoing, reaction to 2.4 fire, so I can't remember the exact details of the number of tests that were performed in that period.

- 1 Q. No, but in general, can you remember that, as at spring 2 to summer 2015, Kingspan were in the process of carrying 3 out a major testing programme at the BRE?
- A. As I said, I can't remember specifically, but I would 5 accept that if the data is there in support of that in terms of number of tests. 6
- $\ensuremath{\mathsf{Q}}.$ Do you also recall that, off the back of that testing 7 8 programme, the BRE were also receiving many requests for 9 desktop assessment reports?

10

Q. And, as Tom Lennon has said in the email we've just 11 12 seen, (inaudible) desktops based on Kingspan's testing 13 at the BRE were potentially going to be a "huge source 14 of income over the coming years".

15 A Yes

16 Q. Is the reality that Kingspan was potentially a significant source of revenue for the BRE in 2015? 17

18 A. Yes, I believe so.

- 19 Q. Is it fair to say that you didn't want to upset BRE's 2.0 relationship with Kingspan and the revenue that it was 21 bringing in or might bring in by refusing to issue the 2.2 classification report in 2015?
- 23 A. No, I mean, it's -- you need, as I said, to -- it didn't 2.4 come down to upsetting Kingspan. That wasn't factored 25
 - in . We had -- cladding wasn't the largest source of

income. BRE is a commercial test laboratory. We have

a lot of clients who spend a lot of money with BRE. We

3 don't wish to upset any of them.

- $\mathsf{Q}.\;\;\mathsf{No},\;\mathsf{I'm}$ sure, but in relation to Kingspan specifically, 4
 - was one of the reasons why you didn't ask the question: why do they want this classification report now,
- 6 7 ten years after the test, because you didn't want to
- 8 upset a major client who had the potential to generate
- 9 a significant amount of revenue for the BRE?

10 A No

- 11 Q. Before I move on, I want to take you back to 2009.
- 12 Were you aware that in May of that year, 2009.
- 13 Kingspan had obtained a systems approval certificate
- 14 from the LABC for Kingspan K15?
- 15 A. I wasn't aware at the time, no.
- 16 Q. Do you remember whether you read an LABC certificate at 17 around that time, 2009, in respect of K15?
- 18 A. I can't recall.
- 19 Q. Did vou ever --
- 20 A. I don't know, unless -- I can't recall it at this time.
- 2.1 Q. Did you ever come to read such a document?
- 22 A. I believe so. I think there was quite a bit -- there's
- 23 been quite a lot of information post—Grenfell, so it's
- 2.4 quite hard to determine what I've read since or what
- 25 I've read at the time. I don't recall in 2009 reading

55

1 an LABC document

- Q. Can we go to {BRE00012252}, please. This is an email 2
- 3 from Sarah Colwell to you, among others, but it's the
- one at the bottom of the screen I just want to ask you 5 about first . It's from John Raybould and it's dated
- 6 14 May 2009, to you, Sarah Colwell and Tony Baker, in
- 7 reverse order. The subject is "Cladding test - LABC
- 8 assessments":

9

2.0

"Hi Folks

10 "I have managed to get an LABC certificate - from 11 Hertfordshire, that says the Kingspan K15 insulation can 12 be used in a mixture of insulation thicknesses, masonry 13 or steel —framed substrates, a min cavity gap of $50\,\mathrm{mm}$ 14

with a range of rainscreen claddings. 15 "I am sure that this will be sent to us officially 16 by Kingspan when Mark Stevens gets back from the 17 Middle East. I would like to think we have tried to 18 establish some guide lines like I was proposing, so that 19 we could at least ive Mark some help with his system

21 "Also note that this appears to give automatic 2.2 acceptance for [systems] over 18m.

23 "Let me know how we want to move forward.

2.4 "Cheers

configurations.

" John ' 25

- If we move up to the top email, we can see that 2 Sarah Colwell sends the email I identified earlier to 3 you and Dr Debbie Smith, and she attaches some 4 documents, and you can see from the attachments that the second document she attaches is the LABC system approval 5 certificate for Kingspan Kooltherm K15. Do you see 6 7 A. Yes, I can see the attachment. 8
- 9 Q. She says:
- 10 "Debbie/Steve
- 11 "We need to discuss this urgently.
- 12 "Regards
- 13 "Sarah.
- 14 Did you have a discussion?
- 15 A. I can't recall exactly. I would imagine there would 16 have been, but I can't recall that discussion.
- 17 Q. Do you recall who was or you would say would have been
- 18 party to that discussion? A. I can't recall exactly, but if there was a meeting that 19
- 20 was addressed from Sarah to myself and Debbie Smith,
- 2.1 then, by inference, I would guess that there was
- 2.2 a meeting on that subject, but I can't recall it. 2.3
- Q. Do you recall anything of what Sarah Colwell's concerns 2.4 were about this certificate?
- 25 A. I don't. I can't recall that.

- Q. Do you recall what the urgency was?
- A. Well, reading down the email, there did seem to be a --3 basically a broad-brush approach to acceptance of
- cladding systems.
- Q. Do you remember being concerned that Kingspan had
- managed to acquire an LABC certificate that gave 6 7 automatic approvals for use of Kingspan Kooltherm K15
- 8 for use over 18 metres?
- 9 A. I think there was concern, I can imagine there would be 10 concern, but it would depend on the basis on which that 11 certificate was issued.
- 12 Q. Do you remember reading the certificate at the time?
- 13 A. I don't remember reading the certificate. I probably 14 did, but I don't recall.
- 15 Q. Right.
- 16 A. Is it possible to see the certificate?
- Q. Yes, it is. We'll go to that, $\{KIN00005705\}$. I have 17 18 some questions before we get to it, but if it helps you.
- 19 There is the system approval certificate . Do you
- 2.0 think you read it at the time? 21 A. I don't recognise it.
- 2.2 Q. Right.
- Do you remember whether any action was taken by the 2.3

58

- 2.4 BRE as a result of Sarah Colwell's message that there
- 25 should be an urgent discussion about what to do about

- this certificate?
 - A. I don't recall what happened after that point.
- 3 Q. Do you remember reading this certificate at the time 4 when you received it?
- 5 A. As I said, I don't recall reading this certificate.
- I probably did. 6
- 7 Q. Okay. So then, if you probably did, can we go down to
- 8 page 4 $\{KIN00005705/4\}$, you can see it's from
- 9 Herefordshire, not Hertfordshire as the email says, and
- 1.0 then if you go, please, to, "Requirement B ... Safety
- Considerations", which is in the middle of page 4: 11
- 12 'K15 has been tested in accordance with ... 13 And you can see there the BS 8414-1 and then the
- 14 pair of BS 476 tests. Do you see that there?
- Then it says: 15
- 16 "From the results it can be considered as
- 17 a material of limited combustibility and meets the
- 18 criteria for Class 0 classification for surface spread 19
- 2.0 When it says from the results of those three tests
- 21 it can be considered as a material of limited
- 22 combustibility, that was wholly inaccurate, wasn't it?
- 2.3 Yes, as defined by ADB, no, that is inaccurate.
- 2.4 Yes. The fact that it had passed a BS 8414 test did not
- mean that it was a material of limited combustibility,

59

- 1 did it?
- 2. A. No.
- 3 Q. Did it not occur to you at the time when you read it, or
- probably read it as you tell us, that this certificate
- certified K15 as a material of limited combustibility 5
- 6 and therefore could be used in any cladding system over
- 7 18 metres?
- A. As I said, I don't recall reading this, but -- and 8
- 9 then ... have BRE been specifically asked in terms of
- 10 their response to this document?
- 11 Q. Well, John Raybould identifies the fact in his email
- 12 that I showed you that it appears to give automatic
- 13 approval for the use of K15 over 18 metres. Did that
- 14 not prompt you to look at the certificate and realise or
- 15 work out why it was that Mr Raybould was saying that?
- 16 A. As I said, I can't recall reading that document
- specifically, but nor do I know ... I mean, has any 17
- 18 request gone into BRE as to what actually happened,
- 19 whether this was dealt with as a complaint or something
- 2.0 like that at that time?
- 21 Q. Did it occur to you at the time when you read this
- 2.2 certificate, to the best of your recollection, that that
- 23 statement there, that as a result of these three tests
- 2.4 K15 could be considered as material of limited
- 25 combustibility, was dangerously untrue?

- 1 A. As I said, I can't recall reading the document, but if presented with that now, then, yes, it's untrue. It's 2 3 not representative of the product. It's not 4 representative of K15. So that's -- in terms of 5 Approved Document B.
- Q. Do you remember whether the BRE raised this question of 6 7 this statement and its accuracy with the LABC at the 8 time, or at all?
- 9 A. I don't recall.
- 10 Q. Do you remember whether the BRE raised the question of 11 this statement and its accuracy with Kingspan at the 12 time or at all?
- 13 A. I don't know. I -- as I say, if ... I mean, would it be possible to request what other correspondence is 14 15 available to this statement?
- Q. If you'd read this at the time and seen Mr Raybould's 16 17 statement at the time, you would have realised that K15 18 was now accompanied by a certificate which would allow 19 it to be put on high-rise buildings above 18 metres with 20 a range of different configurations.
- 2.1 A. But, as I said, I don't recall reading that, and there 2.2 may have been a -- if we've had a meeting, the agreed 2.3 response may have come out from someone else to both the 2.4 LABC and Kingspan, and I'm not -- I do not recall what 25

the sequence of events was after that point.

- 1 Q. Very well. We've seen no documents which show that the 2 BRE ever took the inaccuracy of this statement up with 3
 - either the LABC or with Kingspan. Does the absence of any such communication accord with your recollection?
- 5 A. I don't really recall. I don't — if we'd have seen that documentation, I would have thought there would 6 7 have been a formal response out of BRE on that point.
- Q. Well, let me see if I can leave it with you this way: if 8 9 there had been a response either to the LABC or to 10 Kingspan about this statement in this certificate, you 11 would have seen it at the time, wouldn't you?
- 12 A. Potentially, yes. But, as I said, I don't recall.
- 13 Q. I would like now to look, please, at the content of the BR 135 report, the classification report that was issued for the May 2005 test for K15.

Can we start with your witness statement, please, paragraph 247 on page 56 $\{BRE00005771/56\}$. You say here that, having cited parts of the test report I've shown

"For me, this was simply a matter of looking at the results set out in the test report: if whatever system the test sponsor had installed met the performance criteria in BR 135, then I did not see how (or why) BRE could refuse to classify it. Details of the system tested, however it was made up, would be set out in both

62

- the test report and the classification report. The 2 classification report would be clear about the test
- 3 standard to which the test was carried out (i.e.
- 4 BS 8414-1:2002) and the classification would be carried out to the current version of BR 135 (i.e. BR 135, third 5

edition, 2013)." 6

> Pausing there, when you say "results" in the first line there, it was "simply a matter of looking at the results", do you accept or agree that a classification to BR 135 involves looking at more than just

11 thermocouple data, doesn't it?

12 A Yes

7

8

9

10

18

19

23

25

- Q. What if the BRE no longer held the original test file? 13 14 What would happen then?
- 15 A. Well, all the information for the classification reports 16 should be laid out in the test report
- 17 Q. Right.

18 Now, we went through this a little bit last week. Would the fact that the BRE no longer held the original 19 2.0 test file not be a good reason to refuse to issue 21

a classification report?

- 22 A. No, because you should be able to -- what's actually put 23 into the public domain is the test report, so on the
- 2.4 basis of that document you should be able to issue
- 2.5 a BR 135. There should be nothing in the file

- 1 (inaudible) would be entirely transparent on that basis.
- 2 Q. What if you weren't able to verify all the components of 3 the test rig, would that not be a good reason to refuse
- to issue a classification report? 5 A. No, as I said, the classification report is issued
- against the test report. 6 7 Q. What if there are inaccuracies or inadequacies in the
- 8 test report that, if carried across, would render your 9 classification report similarly inaccurate or 10 inadequate? If that existed, would that be a good 11 reason to refuse to issue a classification report?
- 12 It could potentially, but as I said, if the test report 13 has been issued and the test report is considered to be representative or a full test, then as I said, the 14 15 classification report is just a pass/fail against that 16 test report. So the information in the test report, if 17 that's accepted, that carries through to the BR 135.
 - Q. Going back to where we started this morning, I just want to ask you, then, about the thing you were classifying.

2.0 Can we start by looking at BS 8414, the test report 21 itself, which is {BRE00002511}. This is the 2005 test 2.2 report. The title of the report is:

"BS8414 Part 1: 2002 Test on a Phenolic Insulated 2.4 Rainscreen system."

Note the word "system" there.

2.3

2.4

Now, we're going to come back into the report shortly, but let's just go to a different document. Can we go to {NHB00001317}, please. This is a document published by the NHBC in January of 2015, and you can just see the date at the bottom of the screen in front of you, Mr Howard. I think it's there. Can you see

8 A. Yes

9 Q. There it is, thank you. It's entitled "2015 Cladding 10 Systems".

> Can we go to page 9 in that document {NHB00001317/9}. Here we see, under the heading "Cladding Systems, 3. Rainscreen Cladding system properties", it says there in the first paragraph $--\ \mathrm{do}$ you see that? -- that:

"Rainscreen cladding is an external jointed skin that prevents the majority of rain water from penetrating a wall."

Do you see that? It goes on to say:

"The inner airtight structure acts as a final barrier against water with any water that does penetrate the outer skin of cladding, through joints due to forces of wind, surface tension and capillary action, being drained away. Between these two skins is a ventilated cavity where water is drained or allowed to evaporate."

That then goes on underneath that. You will see a diagram at the bottom of the page. Do you see that? It's got three bullet points there.

It's clear from that, isn't it, that the outer layer, the rainscreen itself, just looking at the first paragraph, is to stop the majority of rainwater from penetrating the wall. That's the purpose of the rainscreen cladding forming part of the system; do you agree?

- 10 A. Well, I agree that that is what that system -- that 11 document says, but I don't -- we fire test façade 12 systems, I don't design -- we don't get involved in the 13 design of systems in terms of water ingress.
- Q. No, I understand that. But do you agree with me that 14 15 the outer laver used in any BS 8414 test, which is 16 a full system test, should have or should be comprised 17 of a panel which prevents the majority of rainwater from 18 penetrating a wall?
- 19 A. I think this comes down to design, because a lot of the 2.0 facade systems can be very open—jointed. So I don't —— 21 it's -- it would come down to the materials properties. 2.2 but I understand from rainscreen cladding systems that 23 they're not watertight. The design of the system is 2.4 that the water can penetrate. What that means in terms 25 of majority, I don't know. But rainscreen systems would

66

allow water to penetrate because they're designed in

that way to try and ventilate. So I don't know at what

3 point the -- you move across the line from majority

4

- $\ensuremath{\mathsf{Q}}.$ Well, do you agree that, in simple terms, the purpose of 5 a rainscreen panel is a screen against the rain? 6
- 7 A. To some extent, yes.
- 8 Q. When you say "To some extent", to what extent would it 9 not be a screen against the rain?
- 10 A. Because you can get very -- it's not my area of
- 11 expertise, but you can get rainscreen cladding systems 12 with quite wide joints, so you will almost inevitably
- 13 have water penetrating in through the rainscreen
- 14 cladding system, and that is why they're designed as
- 15 they are, to allow drainage down and ventilation of the
- 16 systems. It's not my area of expertise, but just --
- 17 it's not entirely waterproof -- a rainscreen cladding
- 18 system is not an entirely waterproof outer layer.
- 19 Q. No, it may not be entirely waterproof because of jointed
- 20 gaps and matters of that nature, but would you expect
- 2.1 the material from which a rainscreen panel was
- 22 manufactured to be water resistant?
- 2.3 A. As I said, yes, I think if it's going to be used in
- 2.4 an outdoor application, then yes, I would, but
- 25 rainscreen cladding systems are not watertight systems.

- 1 Q. And you wouldn't use a cement fibre board as the outer 2 layer of an actual building as a rainscreen because it's 3
 - not an adequate screen against the rain.
- A. But we wouldn't be checking on performance of moisture
- 5 content on outside layers to perform a fire test. As
- I said, there are examples of cement-based boards that 6
- 7 you can use in rainscreen claddings, and rainscreen
- 8 cladding systems, by design, are not watertight.
- 9 Q. But this wasn't, I'm going to suggest to you,
- 10 a rainscreen cladding system because it did not have
- cladding panels which operated as a rainscreen, they 11
- 12 were just building boards.
- A. Well, as I said, I don't -- we wouldn't check the 13
- 14 material properties of the rainscreen systems to confirm
- 15 water penetration or water uptake.
- 16 Q. Unless you had checked to make sure that the
- 17 cementitious particle board used in the 2005 test,
- 18 whatever it was, was actually effective to repel
- 19 rainwater, it wouldn't be a rainscreen cladding system
- 2.0 that you had tested.
- 21 But those checks are not conducted. We do not check on
- 2.2 that and (inaudible) we would not check on the
- 23 wind loading performance, we would not check on the rain
- 2.4 performance of the system. That comes down to the
- 25 system designer and the test sponsor to make sure that

- 1 the system that they are testing is representative. We 2 wouldn't comment on anything other than the
- 3 fire testing.

- Q. What if the test sponsor came along with an outer 4 5 rainscreen made of paper, blotting paper, for example. Would you still go ahead and classify that under BR 135 6 7 in accordance with the test methodology under BS 8414?
- A. I think some of these things need to be looked at, but 8 9 in principle it ... I think that's a more difficult 10 question from something that's -- you wouldn't test 11 blotting paper. I do think there is a line to be drawn 12 that labs shouldn't comment on design, and if you can 13 test to a standard and it falls within the scope of the
- 15 Q. In 2015, Mr Howard, where did you draw that line?
- 16 A. My view was that the system was in compliance with 17 BS 8414 and therefore we could issue a classification on 18 that basis

standard, then that is the reason for classification .

- 19 Q. I know that was the consequence. My question is: where 20 did you draw the line which you referred to a moment ago 2.1 when you said you wouldn't test blotting paper?
- 22 Well, you wouldn't test blotting paper, but you 2.3 would classify a test which had used cementitious 2.4 particle board; where is the line to be drawn between 25 blotting paper and a cementitious particle board,

1 please?

2

3

5

6 7

8

- A. I'm not sure that I could answer -- I can answer that question currently. I think things have moved on considerably, experience is different. I think the system that was classified in my view complied with the BS 8414 standard. I think if it had been a more fragile system, if we'd got asked to, say, classify without a façade at all , then that I think I would have taken
- 9 advice on, because that's beyond the limits of the 10
- 11 Q. Who would you have taken advice from?
- 12 A. Possibly Sarah Colwell, Tony Baker, Debbie Smith.
- 13 Q. So I think from that last answer, it's right, is it, 14 that at the time, in mid to late 2015, you did 15 understand that there was a line between what was 16 compliant with the BS 8414 standard so far as components 17 were concerned to make up the system and what wasn't; is 18 that right?
- 19 A. No, it's more a procedural and classification issue, 2.0 really . It's whether BRE -- whether we regarded a --21 just a pure insulation test or something with blotting 2.2 paper on the front as an indicative test and reported it 2.3 accordingly, or whether that would be given the status
- 2.4 of a full test report. If it's given the full status of 25 a test report, then I think my position is it should be
 - 70

- classifiable .
- 2 Q. I just want to explore that a little bit, please. You
- 3 say it's whether the BRE regarded it as a pure
- 4 insulation test or something with blotting paper on the 5
- Just taking it in stages, do you agree that the 6 7 BS 8414 test was a full system test?
- 8 A. Yes, it's a system test.
- 9 Q. Not a product test?
- 10 A. No, it's a system test.
- 11 Q. And that, in order to test the full system, the system
- 12 has to be a rainscreen system?
- 13 Yes, you are testing a system in accordance with 14 BS 8414.
- 15 Q. And in order to be that system, that system has to have
- 16 a material or product acting as the rainscreen which
- 17 in fact does act as a rainscreen?
- 18 A. Yes, but as I said, we would make no checks on other
- 19 aspects of board performance, because what the
- 20 manufacturer or test sponsor is doing is supplying
- 2.1 a product to market. All we're engaged to do is review
- 22 the fire performance of that board. We wouldn't go on
- 2.3 from there and check things like wind loading,
- 2.4 durability, water ingress, of what the rest of the
- 25 product on the system was tested.

- 1 SIR MARTIN MOORE-BICK: Mr Millett, forgive my interruption,
- 2 but didn't we investigate this pretty thoroughly last 3
 - week?
- MR MILLETT: We did, Mr Chairman, it's a precursor to where 5 I'm going next
- 6 SIR MARTIN MOORE-BICK: Well, perhaps we could go there.
- 7 MR MILLETT: Can we go to page 6 of the classification
- 8 report. That's at {KIN00000134/6}. We will see
- 9 a description of the rainscreen system. Paragraph 2.2,
- 10 "Description of product":
- 11 "Phenolic Insulated Rainscreen System."
- 12 I'll just read it to you. It says:
- 13 "Fixing details: Kooltherm K15 Zero ODP Phenolic

Rainscreen Insulation Boards (1200mm x 900mm x 60mm

- 15 thick) were mechanically fixed to the block work
- 16 substrate. 1200mm × 900mm × 6mm thick cement particle
- 17 boards, manufactured by UAC, were mechanically fixed at
- 18 600mm centres to an aluminium railing system which was
- 19 also mechanically fixed to the block work substrate.
- 2.0 The cement boards provided the overcladding for the 21 rainscreen system. A 40mm deep ventilated cavity was
- 2.2 created between the Kooltherm K15 Zero ODP Phenolic
- 23 Rainscreen Insulation Board and the cement particle
- 2.4 board. Fire stopping was provided by a ventilated
 - rainscreen barrier system, comprising of nominal 2.5mm

72

25

5

6

- thick graphite based intumescent strip bonded to nominal 0.6mm thick galvanised steel sheet, and positioned 0.5m and 4m above the fire chamber on both the main face and the wing face."
- Did you take that straight from the 2005 test report or did you redraft it in any way, do you think?
- 7 A. I can't recall. That looks like it was taken straight8 from the test report.
- 9 Q. Right. Were you able to verify all the components of 10 the test rig that you described here?
- $\begin{array}{lll} 11 & \text{A. Well, the description there probably needs to be checked} \\ 12 & \text{back against the test report.} & \text{If the test report is } --\\ 13 & \text{if that is the description within the test report, then} \\ 14 & \text{that was what was used as part of this classification} \,. \end{array}$
- ${f 15}$ Q. I see. So you didn't actually take steps to go behind the original test report to check the components of the ${f 17}$ test rig?
- Q. Yes. So you didn't, just to be clear, look at the
 delivery notes, the full set of photographs or the video
 files?
- A. No. By the time the test report is issued, it's in

73

- 1 Q. Now, we know that the system didn't in fact incorporate
 2 a cement particle board manufactured by UAC; the
- building board in fact used was a cellulose fibre cement board. Did you know that?
- 5 A. No, I didn't.
- 6 Q. Right.

7

8

9

10

11

12

13

14

15

16

17

18

19

2.0

21

2.2

23

2.4

25

- Looking at the description of the fire barriers -- I've read this to you, if we can go back to it, please, page 6 {KIN00000134/6} -- it says, do you see, in the fourth line, nearly third line up from the bottom:
- "Fire stopping was provided by a ventilated rainscreen barrier system, comprising of nominal 2.5mm thick graphite based intumescent strip bonded to nominal 0.6mm thick galvanised steel sheet ..."

You say that there.

Can I just show you a document. In {BRE00003278}, if we can go to that, please, this is an email from Ivor Meredith, 3 November 2005, to Phil Clark, copied to David Hoare. He, three lines down into that, asks or proposes for the confidential section of the BRE report:

"Promaseal RSB ventilated rainscreen barrier system comprising of nominal 2.5mm Intumex LPSK graphite based intumescent strip bonded to nominal 0.6mm."

"Z2 bright spangle galvanised steel sheet complying with BS EN 10142:1991 for base steel and BS 2989 for the

1 Z2 bright spangle galvanising."

Do you see that?

Now, Mr Meredith told the Inquiry that, by

 $^{\prime\prime}$ confidential section", he was referring to the BRE's

file for the test, and for our note that's $\{Day75/78\}$ to $\{Day75/80\}$.

My question, having shown you this, is: were you aware of this description given by Mr Meredith when authorising the classification report?

- 10 A. No.
- 11 Q. So is it right, then, that you had no idea who the manufacturer of the fire barriers was?
- 13 A. Not at that time, no.
- 14 Q. Did you have the manufacturer's details on the file 15 anywhere?
- A. Well, as I've said, the only file that we had access towas the test report.
- 18 Q. If we put the 2005 test report and the 2015
- 19 classification report up at the same time, can we just
- do that, $\{BRE00002511/6\}$ and $\{KIN00000134/6\}$, you can
- $21\,$ compare the two paragraphs. You can see that in the
- 22 version on the right—hand side of the screen, do you see
- 23 that, which is the 2005 test report, in the last few
- $24\,$ words of that paragraph under "Fixing Details", the
- words in brackets say:

75

1 "Full [manufacturer's] details are held on file ."

2 Those words have been deleted or not carried across,

3 at least, to the description of product in the

 $4 \qquad \qquad \text{classification report in 2015. Do you see that?} \\$

5 A. Yes

10

- Q. Yes. Did you notice that those words hadn't been
 carried across when you authorised the 2015
- 8 classification report?
- 9 A. I don't recall. I mean, the classification report
 - refers specifically to a test report, so the
- 11 classification report should be read in conjunction with
- the test report, and therefore it's regarded as
- a summary of the test report.
- 14 Q. Yes, my question is: when you authorised the 2015
- 15 classification report, did you notice that the words
- "Full [manufacturer's] details are held on file" had not
- 17 been carried across into the 2015 version from the 2005
- 18 test report?
- A. As I've checked the report, yes, I would have been awarethat those statements had been removed.
- $21\,$ $\,$ Q. Yes, and did you ask yourself why that statement had
- 22 been removed?
- 23 A. No. As I said, the classification report -- the
- 24 description in the classification report is a summary.
- 25 So you would expect whoever's reading the classification

74

9

11

- report, if they need the level of detail, should go back and refer to the test report.
- Q. If they'd done that and asked for the full manufacturer's details held on file, what would have happened?
- A. Then it would have been a referral back to Kingspan to
 provide the details of what was there. We wouldn't have
 entered into discussion directly on that test report.
- 9 The referral would have been made back to Kingspan.
- Q. Why were you issuing a classification report without the
 manufacturer's details available, as had been the case
 when the test report had been produced?
- A. It's very, very common in classification reports,
 especially reaction to fire ones, for certain
 information to be withheld at the request of the test
 sponsor. It didn't strike me as anything unusual at
 that time.
- 18 Q. Did Kingspan ask you to withhold any information which 19 otherwise would go into this classification report?
- 20 A. No
- Q. So to ask my question again, please: why were you
 issuing a classification report without the
 manufacturer's details available, as had been the case
- at the time of the issue of the test report?A. Because, as I said, it's pretty common practice for

77

- reaction to fire test reports to have certain items

 Removed. Now, if we were asked that question, although
- 3 we didn't have the test file , we probably would have
- 4 been able to come up with those details, what was in
- 5 that test report, if we were asked directly. As I said,
- 6 issuing test reports and classification reports with
- 7 specific manufacturers' details is common.
- Q. Yes. I'm sorry to press you a little bit. I'm not
 quite sure we've got to the bottom of this.
- You could see, when you authorised the 2015

 classification report, that the original 2005 test

 report referred to a file containing manufacturer's

 details; yes?
- 14 A. Yeah.
- Q. When you authorised the 2015 report, did you ask Vida or ask Kingspan for that manufacturer's details file?
- 17 A. I didn't, no.
- 18 Q. Why is that?
- 19 A. Because, as I said, it wasn't didn't strike me that 20 we were doing anything particularly different to test
- 20 we were doing anything particularly different to test 21 reports and classification reports that are issued on
- 22 a regular basis, withdrawing specific bits of
- 23 information. The information that information would
- have been accessible by the manufacturer, and ultimately

78

 $1 \, \mathrm{Suspect}$ we would have been able to find it at BRE if

- 1 necessary
- $2\,$ $\,$ Q. Why didn't you simply copy across from the 2005 test
- 3 report into the classification report full
- 4 manufacturer's details held on file?
- 5 A. Because the description of the product in
- 6 a classification report is usually a summary, so there
 - is an element of -- it refers you from the
- 8 classification report back to the test report, and
 - I didn't think that statement was considered
- 10 necessary —— I don't know, really. Probably I didn't
 - feel that that statement was necessary.
- 12 Q. Well, every other statement in the fixing details has
- 13 been copied across, more or less, into that passage
- 14 I read to you under "Description of product". Why
- wasn't the full manufacturer's details held on file also
- 16 copied across?
- $17\,$ $\,$ A. Because, as I said, the description of product -- it's
- 18 a summary document and, as I said, that sort of detail
- 19 was usually held in the test reports. The
- $20\,$ classification report refers you to the test report. If
- $21\,$ they've read the test report, then there would have been
- a statement there of, "Full manufacturer's details held on file".
- 24 Q. Do you agree that being able to confirm the components
- of the test rig when authorising the classification

79

- 1 report is crucial?
- 2 A. I think there should have been further checks, but it's
- ${\footnotesize 3 \qquad \quad not \ uncommon \ to \ have \ certain \ information \ withheld \ from }$
- 4 fire testing reports. It's common.
- 5 Q. If anybody was going to be using this classification
- 6 report and the test report to build a cladding system
- 7 that corresponded exactly with what had been tested and
- 8 classified , they would need to know precisely what the
- 9 components of the test rig were, wouldn't they?
- 10 A. Yes, and that could be obtained from the test sponsor, 11 which is Kingspan.
- 12 Q. Do you accept that it was impossible for anybody to
- replicate the system tested using these two documents?
- $14\,$ A. It would depend on what information is contained within
- 15 the drawings. You couldn't tell exactly what was on the 16 rig from that description, but in conjunction with the
- test sponsor, who knew, and if it came to it we could
- have found out as you have demonstrated, we could have
- found out exactly what was in that system if it needed
- 20 to be replicated.

2.2

- 21 Q. Do you accept that it was impossible for anyone to
 - design a compliant building on the basis of this test
- 23 report and this classification report?
- $24\,$ $\,$ A. But you wouldn't use a test and classification $\,$ report to
- $25\,$ solely design a building, but I would say, in

- 1 conjunction with the information provided by the test 2 sponsor, which they were aware that they had withheld 3 from the report, a test system could be developed and 4 installed on a building. 5 Q. Can we look --SIR MARTIN MOORE-BICK: Sorry to keep interrupting you, 6 7 Mr Millett, but I'm rather concerned about this. 8 We all understand that BS 8414 is a system test. 9 A. Yes 10 SIR MARTIN MOORE-BICK: And, as such, it simply determines 11 the response of the specific system to the fire test. 12 Now, why is it not appropriate to identify all the 13 components of the system, including the manufacturer of 14 those components? 15 A. It is, but the manufacturer -- across -- on the European scale, across Europe, it's -- there's a framework for 16 17 testing, under the Construction Products Regulation. 18 a system, and under that system, manufacturers are 19 permitted to withhold data, and it's common within the 2.0 test reports. Now, BRE can provide substantial evidence 21 of this in terms of the standards that have been 22 referred to, but beyond that, it's down to the test 2.3 sponsor to act and provide the additional information. 2.4 SIR MARTIN MOORE-BICK: So your understanding is that the
 - 81

test sponsor, as you put it, can decide the extent to

- $1 \qquad \text{ which the products used in his system are identified?} \\$
- 2 A. A lot of testing, especially reaction to fire, they can
- 3 put in statements that essentially ... it's not
- 4 adequately specified, and that is fairly common across 5 reaction to fire testing.
- 6 SIR MARTIN MOORE—BICK: All right. Thank you, that's 7 helpful. I didn't realise that.
- 8 Yes, Mr Millett.
- 9 MR MILLETT: Mr Chairman, we may have to revisit that with 10 the witness at a later point.
- 11 Can I ask you whether you were aware that, by the 12 time the 2015 classification report was issued, K15 had 13 undergone a number of major changes?
- 14 A. No

25

- Q. Did you know, for example, that in September 2006, new
 technology in relation to the introduction of
- perforations to the foil facings of K15 had come into
- perforations to the foil facings of K15 had come into K15?
- 19 A. No, I wasn't aware of any modifications to the product.
- Q. Were you aware that the K15 that had been tested in 2005
 had no perforations in the foil facings, whereas that
- being sold after 2006 did?
- 23 A. No, I wasn't aware of any changes to K15.
- $24\,$ $\,$ Q. Was that something that you would expect to be told by
- Kingspan when asking you to classify K15 based on a 2005

- 1 test in 2015?
- 2 A. Yes. I think, yes, there should have been a declaration
- 3 in place to say -- if we were going to do that, there
- 4 should have been a manufacturer's declaration to say
- 5 nothing had changed.
- 6 Q. You say there should have been a manufacturer's
 - declaration in place; was that a formal step that BRE
- 8 required of its clients when asking to classify
- 9 a product --
- 10 A. No.

7

- 11 Q. based on an earlier test?
- 12 A. No.
- 13 Q. So when you say there should have been a manufacturer's
- 14 declaration, is that something you have ever seen
- 15 before? As of 2015, had you ever seen such
- 16 a declaration before that?
- $17\,$ $\,$ A. We'd ask for statements, in effect , that products had
- not changed following -- when requests had come in for
- $\ \ \, 19 \qquad \text{change of name. Not } -- \text{ you wouldn't usually ask for }$
- 20 that sort of declaration against a test report, because
- 21 the test report's a statement of fact at a specific
- 22 moment in time. If they're asking for modifications to
- $23 \hspace{10mm} \hbox{the test report or classification report, classification} \\$
- $24\,$ letters , then you would start asking for that sort of
- 25 declaration.

83

- $1\,$ $\,$ Q. You say classification $\,$ report/letters , what are those?
- 2 A. There's a -- when you classify to class 0, it's issued
- 3 as a letter, it's not necessarily a classification
- 4 report. The European system for testing is a defined
- 5 report, in defined format. Cladding -- 8414's a defined
- 6 format as defined by BR 135, but for class 0 you would
- 7 just issue a separate classification letter .
- $8\,$ $\,$ Q. At what point when issuing a classification letter would
- 9 you ask for a declaration that nothing had changed in
- 10 the product?
- 11 A. Only if we were following EGOLF procedures and they were
- 12 requesting things like a change of name or re-badging of
- 13 the test report.
- 14 Q. Are you aware that, in October 2020, the BS 8414 test
- and BR 135 classification reports were withdrawn by
- 16 Kingspan because K15 that had been tested was
- an entirely different product to what was being sold in
- the market after 2006?
- 19 A. The first I heard of that was when the letter was issued 20 by Kingspan.
- $21\,$ $\,$ Q. Is that fact not something that you should have checked
- 22 expressly with Kingspan before proceeding to issue the
- 23 classification report in September 2015?
- $24\,$ $\,$ A. As I said, test reports across the fire industry in my
- experience are snapshots in time. There's no ongoing

82

1 monitoring of the testing whatsoever. There's no 1 "I understand the following people were present from 2 contract in place, we do not do any surveillance. My 2 BRE: Phil Clark, Harry Granados, Tom Lennon and myself." 3 view at the time is we were issuing a classification 3 So we can take it that you did attend this test. A. Yes, I did. There was two, hence ... 4 report against a document, test report. We wouldn't --4 there are -- the responsibility is on the manufacturers 5 5 Q. Yes, all right. for test reports and classification reports. It sits If we go back a little bit, please, up the screen at 6 6 7 with them. There is no surveillance, there is no 7 paragraph 193, we can see that you say there, in the 8 8 auditing of what goes on. middle of the paragraph: 9 Q. I understand that, but given the lapse of a decade, was 9 '... this test was deemed to be terminated 10 1.0 prematurely due to flames off the top of the rig." it not the obvious question to ask? 11 A. I didn't expect to be asked to issue a classification 11 Do you see that? 12 12 report if the product had changed. A. Yeah. 13 Q. No, that's not my question. Or, rather, it's an answer 13 Q. You go on to say: 14 "As such, the test system could not be classified to 14 to a different question. 15 Let me ask the question one more time: given the 15 BR 135. This was disputed by Kingspan, who disagreed 16 16 with BRE's interpretation of BS 8414 in this respect. lapse of a decade, was it not the obvious question to 17 ask, very simply; can you confirm that this product --17 BRE treated this as a formal complaint and maintained 18 A. No. No, it wasn't, because of the view that I had of 18 its unwillingness to classify the system to BR 135." 19 test and classification reports. You are -- the 19 Now, is it right, just tracking through the history 20 classification report is a statement of pass/fail. 2.0 as briefly as I can summarise it, that Kingspan 2.1 There is no ongoing validity. It was a statement of 21 disagreed and took the point that paragraph 8.5 of 22 22 pass/fail against that test. It's no endorsement of BS 8414-2, because this is a part 2 test, only applied during the first 30 minutes of the test? 2.3 future manufacturing. It is a statement of pass/fail 23 2.4 2.4 Yes, I understand that that was their objection or the against that test. 25 Q. Can we then turn to the test carried out in March 2014 point in which they wished to contest the result. 85 $\ensuremath{\mathsf{Q}}.$ And the BRE considered that to be a formal complaint and 1 by Kingspan on a system incorporating a Trespa 1 the formal complaint procedures were invoked? 2 rainscreen over K15 insulation. The test -- I think 2.

3 we've seen the documents relating to it earlier -- was carried out on 19 March 2014.

5 At that time, March 2014, is it right you were the 6 business group manager?

7

Q. Would you therefore have had oversight of the test 8 9 programme at that time?

10

18

19

2.0

21

2.2

2.3

2.4

25

11 Q. I think you attended this test, didn't you?

12 A. There was two Trespa tests on different dates. There 13 was -- it depends on which test we're now talking about, 14 because there was two. I believe.

15 Q. Right. Let's go to your witness statement to see if we 16 can clear that up. Page 43 {BRE00005771/43}, 17 paragraph 195. The question is Q7:

> "Test report 293940 ... dated 26 June 2014, a copy of which is attached for your reference, was approved and signed by you. The test sponsor was Kingspan Insulation Ltd and the system, tested to BS 8414-1: 2005 on 19 March 2014, incorporated K15."

At 195, if you just go down the page, you say, in answer to the question, "Who was present during this test, both from the BRE and from the test sponsor?":

86

3 A. Yes

Q. Let's go to $\{BRE00015608/2\}$, please. This is an email in May 2014. It's an email from Tony Millichap, bottom 5

6 part of the screen, 21 May 2014 to BRE Group Quality, 7 and you are one of the people copied in on that email;

8 do you see that?

9 A. Yes.

19

2.0

21

2.2

23

10 Q. It's also copied to T Randle at Fenwick Elliott, who 11 I think were Kingspan's lawyers at the time, weren't 12

A. I wasn't aware of that, no. 13

14 Q. Right. Well, take it from me that (inaudible).

15 In the second paragraph, you can see that 16 Mr Millichap refers to a meeting that took place on 17 9 May, and he says: 18

"At a recent meeting dated Friday 09th May between your Mr Stephen Howard and Mr Tony Baker our Mr Ivor Meredith and myself we confirmed we still wish to receive the test report according to the test standard BS 8414 Pt2:2005, and would also like a classification against BR135.'

2.4 Then he goes on to say:

25 "Points verified at the meeting include:

1 "Full draft test report to be supplied at the this even up for discussion? 2 2 A. Because it's quite common, if you had a test that earliest opportunity 3 "The test was valid and accorded to all needs of the 3 doesn't complete or fails to -- basically to ask whether 4 standard. 4 a test report is required. If the test report is -- if "Video evidence from the rearward camera's was 5 5 the test sponsor requires a test report, irrespective of the result, we're obliged to issue that test report. 6 requested. 6 7 "Interpretation against the BR135 criteria is not 7 Q. Now, you said a moment ago in your evidence that the inference was that they were going to take it to someone 8 limited to the BRE. 8 9 "BRE has proposed an amendment to the standard to 9 else to obtain a BR 135 classification . Was that your 10 10 define the test duration at 60 minutes.' inference, as you put it, at the time? 11 11 A. Well, the question was: was BR 135 exclusive to BRE? Then questions underneath that: 12 12 "Mr Philip Clark confirmed on the day of the test it And I think the answer to that is no. it's not exclusive 13 was not terminated before ts +60mins was reached, this 13 to BRE. It's a classification report. 14 has been retracted. 14 Q. I'm just trying to understand what you mean in your 15 "Definition of the test duration, it is our 15 evidence when you say, "The inference was they were 16 contention the full test duration is variable between ts 16 going to take it to someone else to obtain a BR 135 17 +30mins and ts +60mins. 17 classification ". 18 "This is evidenced in the standard B3.4 and BR135, 18 Did you suspect that they were going to take the 19 R2 " 19 test report and go and get a BR 135 classification from 2.0 Now, does his record thus far -- and there is more 20 somebody else? 2.1 of it over the page -- correspond with your recollection 21 A. Yes. 2.2 of the meeting? 2.2 Q. Because you were refusing to do one? 2.3 2.3 A. Some aspects do, others do not. I mean, the second A. Yes. 2.4 line, "The test was valid and accorded to all the needs 2.4 Who would produce one? What sort of person would 25 of the test standard", well, that was being ... well, it 25 produce one? 91 1 depends on what he meant by that, I don't really know. 1 A. Well, another test laboratory could produce it. But 2 Q. At all events, do you recall the basic point, which is 2 classification reports are not exclusive to 3 that at that meeting Kingspan made it clear that they 3 laboratories. 4 wanted a test report from the BRE? 4 Q. Now --5 A. Yes 5 A. They are a public domain document. A consultant could Q. Did they explain why they wanted a test report? 6 6 produce it. Q. Go, please, to {BRE00004980}. I think your inference, 7 7 A. The inference was that they were going to take it to someone else to obtain a BR 135 classification. 8 8 as you just described it, is actually reflected at the 9 9 time. This is an email from you to Dr Debbie Smith and Q. You say that was the inference: did you ask the 10 question: why do you want a test report, given that it 10 Richard Hardy on 26 May 2014, and if you look at the 11 was terminated early? 11 first paragraph, you say: 12 A. No, because they're entitled to a test report. 12 "There were flames over the top of the rig at around 13 Q. What --13 43mins. This in our view means that the test at that 14 A. It's contractual. 14 point is terminated and if you do not run for the full 15 15 60 mins you cannot be classified against BR135. Q. I'm so sorry? 16 A. It's contractual. We contracted to conduct a test, the 16 "Kingspan Insulation are contesting the 17 17 test had been conducted, we were contracted to issue 18 18 "The email was send[sic] for info really . I suspect a test report. 19 Q. Right. 19 that they will get A. N other to offer a classification

12

13

14

Q. Let's look at that. If we go to the email first, it's {BRE00015735}. It's an email from you to Robbie Scott, and if you look a little bit lower down the page, you can see there is an email from you to Ivor Meredith. Do you see that? 2 July at 14.53, Ivor Meredith, "Kingspan cladding report":

"Ivor,

"The report of the recent test.

"I am aware you need a response to other issues

The report itself is at {BRE00015736}. Can we just go to that. Is this the test report that you sent Mr Meredith on 2 July?

A. Yes, I believe so. 18

Q. It's dated 26 June 2014, and it bears the number 293940. 19 20 Just note that number, please, for the time being, 2.1

> I think, if you look at page 2 {BRE00015736/2}, you will see you authorised this report. Can we just look at that. There is your name and signature.

Now, can we go to {BRE00018037/4}, please. This is

an email from Phil Clark on 16 January 2015, so a little bit later, and you can see that he says to Amaury Queuille, who is another client, I think, of the BRE, and he says in the first paragraph, he says there:

"Good morning Amaury, I hope you are well, I would suggest that you discuss the issuing of a report with Mr Howard as we do not issue BS8414 reports [if] the system did not complete the test requirements. I am happy to draft a quick letter report showing the data which Steve may be able to forward to you."

I know you didn't see this at the time necessarily, but when Mr Clark says, "we do not issue BS8414 reports [if] the system did not complete the test requirements", was Phil Clark stating the formal policy of the BRE?

15 A. No. I don't believe so.

16 Q. Why did he say it then, do you know?

17 A. I don't. If you run a test and the client requests 18 a test report, whatever that test result is, my 19 understanding is that we're contractually obliged to

2.0 issue it.

21 Q. Right. So Mr Clark is telling Amaury Queuille something 2.2 which wasn't correct, is that right, when he says that the BRE doesn't issue BS 8414 tests if the system 23 2.4

doesn't complete the test requirements?

25 A. Yes. I don't believe that that is correct. 1 Q. Why would he say it?

A. I don't know. But, as I said, contractually BRE or any

3 test lab, you are contractually obliged to issue a test 4 report.

5 Q. Let's go back, then, to the email run we were looking at before, which is May 2014, so a little bit earlier in 6 7 time, {BRE00015608}, please. I broke off halfway 8 through that email to come into this later one, but 9 let's go back to it.

If you go a little bit further down the page to the bottom of page 2 and on to the top of page 3 {BRE00015608/3}, you can see that after the further bullet points, in the third paragraph down it says:

14 "This issue ... '

15 Do you see that?

16 A Yes

10

11

12

13

17 Q. "This issue is of such significance to Kingspan's 18 business that we have consulted with our lawyers who 19 have confirmed that in their view BRE's current position 2.0 cannot be justified. We recognise the influential 21 position BRE hold and do not wish to contradict its 22 views however our conviction is such that we may have no 23 other option"

2.4 Did the fact that Kingspan were getting their 2.5 lawyers involved perhaps influence the BRE's decision to

1 issue a BS 8414 test?

2 A. No, and that is the reason, once the complaint has got 3 to that stage, we got independent QA department. It was raised as a complaint, there was visibility of what we 5 were doing, no -- there was -- even throughout the QA 6 and compliance department, there's no suggestion that we

7 shouldn't issue a test report, and my position is 8 whether a test passes or fails , we'd been paid to issue

9 a test report and that is what we are contracted to do. 10 There wasn't a position where BRE would refuse to issue

11 a test report based on test performance, or I am not 12 aware of it.

13 Q. Mr Clark's evidence is that it was very unusual for the BRE to issue a test report where the test had been 14

15 terminated early.

16 A. It is unusual, because -- but it's not unheard of. It's 17 unusual because, for the most part, the way you conduct 18 the testing, they don't want the full test report for

19 a failed test. Clients don't generally want that. So 2.0 it's offered, and often you will close a contract with

21 just a simple letter. But that won't be the only

2.2 example of BRE offering a test report on a test that's 23

2.4 Q. He also I think indicated in his evidence that he was

25 very uncomfortable when the BRE agreed to produce a test

- 1 report for this test notwithstanding that it had been 2 emanated early.
- 3 A. But, as I said, the contractual position is: run the 4 test and, as part of that, you produce a test report.
- 5 Then ... it doesn't say on the basis if the test passes.
- 6 It's a test report.
- 7 Q. Yes, that wasn't the impression one got from his evidence. He wouldn't be uncomfortable with producing 8 9 a test report if in fact it was something that the BRE was contractually obliged to do anyway, would he? Can
- 10 11 you comment on that? 12 A. Well, all I can say is a statement that we don't issue
- 13 or we didn't issue test reports for failed tests is 14 incorrect, or as I'm here, that's not my understanding,
- 15 and the QA -- this complaint was under the scrutiny of 16 our QA department and others, and there's no mention in
- 17 there that we should not issue a test report. There's
- 18 nothing within our procedures to say we shouldn't issue
- 19 a test report against a failed test.
- 20 Q. Is it the position that if a client doesn't ask for 2.1 a report and the test fails , then you don't issue a test 2.2 report?
- 2.3 A. Pretty much (inaudible).
- 2.4 Q. So it's only if the client asks that you do?
- A. Yeah, and there's other examples of that within both

97

- 1 cladding and other areas.
- 2 Q. But you say it's very rare -- not unheard of, but very 3 rare -- for a client to ask for a test report where the test has been terminated early?
- 5 A. I think "rare" is too strong a word. It's not common.
- We do not routinely issue test reports against failed 6
- 7 tests because the clients don't usually require them and
- 8 don't need to do anything with them at that point. What
- 9 they're looking for is a test that passes. But, as
- 10 I said, it's -- there are other examples of tests that 11 fail where we've issued reports.
- 12 Q. And your inference or guess at the time was that they
- 13 were going to go off and ask another test house to 14 classify the test to BR 135?
- 15 A. Well, from the question that we were asked, whether 16 anyone could issue a BR 135, then yes, that was my 17
- 18 Q. Given that the test had been terminated early, was it 19 your view at the time that it couldn't be classified
- 2.0 under BR 135?
- 2.1
- 2.2 Q. And therefore when you suspected that Kingspan wanted
- 23 the test report so that they could go off and get it
- 2.4 classified by somebody else to BR 135, did that not
- 25 alert you to something, that something might be wrong?

98

could see the complaint progressing, but ultimately

A. It did, and, as I said, it was raised within BRE, others

- 3 there's a difference of opinion as to whether the test
- 4 should have been run or should have been terminated or
- 5 whether the test met the requirements of BR 135, and other people are quite within their rights to express 6
- 7 a different opinion.
- Q. We don't see you anywhere saying to Kingspan, "Well, we 8
- 9 don't agree with you, but the view you're taking about 10
- test failure is a tenable view, so by all means get 11 a second opinion". You don't say that anywhere in the
- 12 documents we've seen.
- 13 No, what actually happened, the agreed way forward,
- 14 because it comes down to a -- because the Kingspan
- 15 position was it was an interpretation of the BS 8414
- 16 test standard, so the resolution proposed was to go back
- 17 to the committee that issued the document or is
- 18 responsible for drafting and get a definitive
- 19 determination from the drafting committee of the
- 2.0 standard as to whether they viewed the test as a pass or
- 21 as a fail , or whether ... whether they agreed with
- 22 Kingspan's position or whether they agreed with BRE's.
- 23 But that was to go back to the BS committee for review. 2.4 Sorry. I'm going to ask my question again: it's right.
- 25
- isn't it, that we don't see anywhere in the documents

- 1 you advising Kingspan to go and get a second opinion, do 2. you?
- 3 A. No.
- 4 Q. If in fact you were of the view at the time that the
- 5 point being run by Kingspan about why you should produce
- a test report or why early termination wasn't a failure 6
- 7 was a tenable view, as a professional, impartial testing
- 8 house, you would have said to them, "Of course, that's
- 9 our view, but go and get a second opinion". My question
- 10 is: why didn't you do that?
- 11 A. We did, but that second opinion would have come from the
- 12 BS drafting committee of 8414, to get a definitive
- 13 statement as to the interpretation of the standard at
- 14 that point.
- 15 Q. Let's see how this progresses.
- 16 Can we go to {BRE00003597}, please. This is 17
 - an email from Robbie Scott to you and Phil Clark on
- 18 12 June 2014, and he asks the question, "What bit is
- 19 inconclusive?' 20

21

- If you look at the screen, the top email is an email of 11 June.
- 2.2 Can you go down the bottom of the screen. There is 23 an email from Robbie Scott, 11 June 2014, to you and 2.4 Phil Clark:
- "Hi Steve/Phil, 25

"Following the investigation meeting last Friday Mr Scott -- is this right? -- on 4 November 2014. Is 2 please find my summary attached. 2 that right? 3 "I am proposing to set up a meeting with you both at 3 A. I -- that's not a form I'm particularly familiar with. Q. Right. 4 the earliest opportunity as I feel this complaint is 4 inconclusive. I would advise not to send out the test 5 5 A. That just looks like a database download, and ... report until we have resolved the complaint." Q. Do you remember having a meeting with Robbie Scott about 6 6 7 Then you, I think, respond on 12 June, if we scroll 7 this inconclusive ...? 8 A. I don't, no. up, please, the next day, and you say: 8 9 "What bit is inconclusive? 9 MR MILLETT: You don't? 10 "DS - Kingspan/Cladding not passing etc." 10 Mr Chairman, we'll break there, if that's convenient 11 Do you see that? 11 to you, and we'll come back to this. 12 12 SIR MARTIN MOORE-BICK: Yes, I think that's a good point, A. Yes. 13 Q. Did you write that? Are those your words? 13 thank you very much. 14 14 Well, now, Mr Howard, we're going to have a break 15 Q. I'm just trying to work this out, because, "What bit is 15 now so we can all have some lunch. We will resume, inconclusive?", is that your question? please, at 2 o'clock. Again, no talking about your 16 16 A. To Robbie, ves. 17 evidence over the break. All right? 17 18 Q. And the bit underneath it, "DS - Kingspan/Cladding not18 THE WITNESS: Thank you very much. SIR MARTIN MOORE-BICK: Thank you. See you at 2 o'clock. 19 passing", did you write that or was that his embedded 19 20 20 response? Thank you very much. 2.1 A. No, I wrote that. 2.1 (1.00 pm) 2.2 Q. I see, you wrote that, okay. What does that mean? 2.2 (The short adjournment) A. What it actually means is, to Debbie Smith, just to put 2.3 (2.00 pm)2.3 2.4 2.4 SIR MARTIN MOORE-BICK: Welcome back, everyone. We're now the email in context, because you have a large volume of 25 emails -- we had a large volume of emails at BRE, and it going back to hear further evidence from 101 103 1 was just a note to Debbie to give a reminder to say the 1 Mr Stephen Howard. email below is regarding Kingspan cladding and the 2 2 Mr Howard, are you there? 3 outstanding complaint against them. 3 THE WITNESS: I am. Q. I see. Because this was copied in to Debbie Smith, and SIR MARTIN MOORE-BICK: Good, hello. And you're ready to 5 this was a reminder to her, who would see this, that 5 carry on, I hope? 6 6 THE WITNESS: Yes, I am. this was --7 7 SIR MARTIN MOORE-BICK: Thank you very much. A. Yes. 8 8 Q. Is that how it works? Then, Mr Millett, when you're ready. 9 MR MILLETT: Yes. 9 A. It was literally just to say -- Debbie was extremely 10 busy, we're all busy, it was just a note on the line to 10 Mr Howard, did you ever get to the bottom of 11 say -- just as a bit of an aide memoire to say: this is 11 Mr Scott's conclusion that there was something 12 what this email exchange is about. 12 inconclusive about the test report in its current draft Q. We haven't been able to find a record of any response 13 13 form? from Mr Scott to your question, "What bit is A. I don't believe I did, no. 14 14 inconclusive?" Is that right? Did you respond to him Q. Why is that? 15 15 16 by email, do you remember? 16 A. Sorry, the screen's no longer full screen. Do you mind, A. I don't think I ever got a response back from Robbie or 17 17 18 Stephen Phillips or the QA department. 18 SIR MARTIN MOORE-BICK: Top right-hand corner, it should say 19 MR MILLETT: Can we go to {BRE00005596}. 19 "View" or something like that. Are you full screen now? THE WITNESS: Yes, I'm full screen now, sorry. 2.0 2.0 Mr Chairman, this is probably the last document 21 21 SIR MARTIN MOORE-BICK: Well done. No, it's quite before lunch. 2.2 SIR MARTIN MOORE-BICK: All right. 2.2 all right. 23 MR MILLETT: We can see from this, which is an internal BRE MR MILLETT: My question was: why is that? 23

102

24

2.5

A. I think at the time Robbie was taking -- there was quite

a bit of absence from BRE and I just don't think it was

2.4

2.5

document, that it's part of the complaint file. Do you

see that? It seems that you had a meeting with

- 1 ever resolved. 2 Q. Right. Did you know that the report was sent out? 3 4 Q. I will come to it. It was on 2 July. Are you saying 5 that it was sent out without its inconclusive nature 6 ever being resolved? 7 A. Yes, if that was the ... yes, the test report went out. 8 I didn't get a response back to why it was inconclusive. 9 Q. Can we look, please, at $\{BRE00003595\}$. This is the BRE 10 internal audit report in relation to this complaint. 11 It's on a form dated 6 February 2013, as Mr Clark told 12 us, but the date of this document is 6 June 2014, and 13 you can see that from the top right-hand corner. 14 "BGM: Steve Howard. "Auditee(s): Phil Clark." 15 16 What does BGM stand for? 17 A. Business group manager. 18 Q. The activity is a technical complaint investigation, and 19 you can see the background. Can we go to page 3 {BRE00003595/3}, please. At the 20 21 very end of the document, it says: 22 "It is advised not to send the test report to 2.3 Kingspan until this complaint has been concluded." 2.4 Just pausing there and going to another document. 25 {BRE00003597}, can we just go to that, please, this is 105 1 an email also of 12 June 2014, which we saw before, and if we go to the second email we looked at before, you 2 3 can see that this is where he says that it's inconclusive, and in the last sentence he says: 5 "I would advise not to send out the test report until we have resolved the complaint." 6 7 So there we have it in two places: the report of 8 6 June and this email of 11 June. 9 Do you know why the report was sent out before the 10 complaint had been resolved?
 - A. I can't remember exactly whether there was a discussion over it or whether it was agreed to release the report. I don't think there was any response back to the email regarding the -- why the complaint is felt to be inconclusive.
- 16 Q. Why would the BRE have sent the report to Kingspan at 17 a time when the complaint was still being investigated 18 and when the person charged with the investigation, 19 Robbie Scott, had advised that the test report not be 2.0 sent to Kingspan until the complaint had been resolved?
- 21 A. As I said. I can't recall the exact details around that. 2.2 but the report that was issued was -- we weren't clear 2.3 on what was inconclusive. We had a position over 2.4 whether in our view the sample wouldn't have met or the 25 system wouldn't have met BR 135 and felt it appropriate

to send the report in that way.

2 Q. Was there, to your recollection, a degree of pacifying 3 Kingspan as a good client by sending them this report

4 even though the complaint hadn't been resolved?

5 A. No. I think the test report reflected the situation and the contract as it stood. We issued a report. The 6

7 report basically stated that the test was terminated

early. I think the only bit that could be inconclusive 8

9 is if the report was then changed to say it was a pass, 10

which it wasn't. It was basically sent out stating the 11 test had been terminated.

12 Q. Can we go back, please, to {BRE00003595}. We looked at 13 page 3 in this document. Can we go to page 2 14 {BRE00003595/2}.

15 Here we see a heading "TESTING", and it says: "The test data was reviewed with Phil Clark and the 16 17 following was noted:

18 "1) The cladding wall logger and thermocouples 19 IN 3884/5/6 was last calibrated on 18 September 2012 and 2.0 was due calibration on 24 September 2013. This is now 21 classed as a Major Non-Conformance."

22 Then you can see item 5 — there are several other 23 notations —— "Internal test procedures and result sheets 2.4 are not controlled"

2.5 First, what does "not controlled" mean there? What

107

- 1 did you understand that to mean when you saw this
- 2
- 3 A. Essentially any documentation that should ultimately end up in the BRE quality system and be signed off and 5
- 6 Q. Did it concern you at the time that there was
- 7 documentation which had not ended up in the BRE quality
- 8 system and been signed off and approved?
- 9 No. Α.

2.4

- 10 Q. You weren't concerned about that?
- 11 Not that they were not controlled, no
- 12 Did it not concern you that there were internal test
- 13 procedures and result sheets not controlled? 14 A. Well, they would probably -- I think, as we described
- 15 earlier, some of this documentation was in development 16 and we were working through it. It wasn't uncommon to
- 17 develop new systems of working with documentation and
- 18 software and integration with that and run those through
- 19 the test process 2.0 Q. What was the point of Mr Scott noting the fact here if
- 21 it wasn't uncommon? 2.2 Because it's against what -- BRE's policy I would
- 23 imagine would be to have controlled documents, but, as
 - I said, it wasn't unusual to run off draft documents if
- 25 you were developing tests and you hadn't got round to

108

11

12

13

14

6

9

- 1 that point of agreeing all the parameters that should be 2 within those documents
- 3 Q. Did you take the matter up with Robbie Scott and ask him
- 4 what procedures and what result sheets were not
- 5 controlled?
- A. No, I didn't. As I said, Robbie was off for 6
- 7 considerable periods around that time. I believe.
- 8 Q. Well, he wasn't off, was he, in early June 2014 when
- 9 produced his reports? Why didn't you ask Mr Scott, once 10 you saw this document, what he was talking about at
- 11 item 5 there?
- 12 A. Because I probably didn't need to. I probably knew
- 13 which was -- which documentation we were using in the
- 14 files to record test results
- 15 Q. Looking at item 1, then, the cladding wall logger and
- 16 thermocouples in three places last calibrated in
 - September 2012, due calibration September 2013. This is
- 18 now June 2014, so nine months later. Were you not
- 19 concerned to learn that there had been a nine-month
- 2.0 delay between the last due date for calibration and the
- 2.1 date of this report, and a six-month delay between the
- 22 date of the calibration and the date of the test?
- 2.3 A. Yes, that is of concern.
- 2.4 Q. Were you concerned at the time to learn that?
- A. Yeah

17

109

- 1 Q. What did you do about it?
- A. The procedure would have been that we would have
- 3 rechecked the calibration on the logger to make sure
- that that hadn't changed results in the meantime, to
- 5 make sure the calibration hadn't shifted.
- Q. That may have been the procedure at the time; what did 6
- 7 you do about it? Did you do anything when you learnt
- 8 this fact?
- A. Yes, I think I arranged for the loggers, in conjunction
- 10 with Phil, to be recalibrated.
- 11 Q. That was quite a serious failing, wasn't it?
- 12

9

- 13 Q. Can you account for how it had come about that the BRE
- 14 had left its wall logger and thermocouples in those
- 15 three places uncalibrated for six months after the due
- 16 date for recalibration?
- 17 A. No, I can't. Shouldn't operate in that way.
- 18 Q. When you say "Didn't operate in that way" --
- 19 A. Shouldn't operate in that way.
- 2.0 $Q.\ I'm$ afraid I didn't hear you and I don't think the
- 21 transcriber did either. Can you repeat the answer one
- 2.2 more time, please?
- 23 A. You shouldn't operate in that way. You shouldn't
- 2.4 operate with uncalibrated equipment.
- 2.5 Q. Thank you.

110

- 1 Did you tell Kingspan that, at the time of the
- 2 19 March 2014 test, the wall logger and thermocouples
- 3 were six months past their due calibration date?
- A. I don't believe I did, no, I can't recall . 4
 - Q. Why is that?
 - (Pause)
- 7 A. Well, I don't know why that was. It may have been that
- 8 by that time, we knew the calibrator -- we knew the
 - calibration of the logger had been reinstated, we
- 10 verified the performance of the logger at that point.
- 11 So that the gap between the test and the recalibration
- 12 of the logger meant that we knew that that -- the 13 temperature of the rig were within calibration.
- 14 Q. Well, maybe, but do you know that?
- 15 A. No, I don't know that for a fact.
- 16 $\ensuremath{\mathsf{Q}}.$ Would that mean that in fact, at the time that you
- 17 issued the test report, as happened in July 2014, the
- 18 BRE would not have been in a position -- and in fact
- 19 nobody would have been in a position -- to issue
- 2.0 a reliable BR 135 classification report, would they? 2.1 A. It depends on when -- or the results of the review and
- 22 the recalibration of that logger, depending on when that
- 2.3 took place.
- 2.4 Have you —— sorry, did you want to finish your answer?
- 25 Now, this is something that we could look at, to see

- 1 when the recalibration of the logger was redone. It may
- 2 have been in that intervening period. I wouldn't have
 - those dates to hand.
- Q. Okay, let's see how this would have worked
- 5 chronologically

3

8

- 6 Before 6 June 2014, did you know that the cladding
- 7 wall logger and the thermocouples were six months or
 - seven months, in fact, I think, past their due
- 9 recalibration date at the time of the March test?
- 10 A. I can't recall. I may have known, but if we could
- 11 get -- look at the evidence of what went on -- the
- 12 calibration of that logger, then there would be
- 13 a definitive answer to that.
- 14 Q. Well, I'm asking for your recollection . So do you
- 15 remember or not?
- 16 A. I don't recall. no.
- Q. Do you know, to the best of your recollection, whether 17
- 18 after 6 June 2014, but before 2 July 2014 when the test
- 19 report was sent to Kingspan, the cladding wall logger
- 2.0 and the thermocouples were recalibrated and checked?
- 2.1 I can't recall the exact date when it was done.
- 2.2 Q. This would have fallen under your responsibility,
- 23 wouldn't it, as the business group manager responsible
- 2.4 for cladding; yes? But you can't tell us whether or not 25

there was in fact a recalibration so as to check whether 112

- 1 the cladding wall logger and thermocouple data which was
- 2 produced by the March 2014 test was re-verified?
- 3 A. No, I can't tell you without reviewing the material at 4 the time
- 5 Q. Did you tell Kingspan that the test data produced by the March 2014 test would have to be reviewed against 6
- 7 recalibrations of the cladding wall logger and the
- 8 thermocouples?
- 9 A. No.
- 10 Q. Why not?
- 11 A. Because, as I said, that may have been done. The 12 recalibration of the logger may have been done before
- 13
- Q. You would know that, wouldn't you, as the person in 14 charge; no? 15
- 16 A. Sorry?
- 17 Q. You would know that, wouldn't you, as the person in 18
- charge?
- 19 A. I would have hundreds of instruments, thousands. We
- 20 literally have hundreds and hundreds of items of 2.1
- calibrated equipment. It's a major issue calibrating 22
- all the equipment in the lab. We even have our own 2.3 in-house calibration services . I wouldn't know about
- 2.4 the specific equipment in a specific lab.
- 25 Q. Sorry, I don't understand that answer, so far as I could

- 1 hear it
- 2 The cladding wall logger and the thermocouples are 3 at the BRE's premises, aren't they?
- A. They are.
- Q. And recalibrating them would have been a relatively 5 6 simple job, wouldn't it?
- 7 A. No, it's probably days of work to recalibrate a logger.
- 8 Q. Days of work?
- 9 A. Yeah.
- 10 Q. So you would remember whether there had been days of 11 work to recalibrate the logger, wouldn't you?
- 12 A. No, because I wouldn't -- I wasn't in the labs on a day-to-day basis. Whilst it was my responsibility 13
- 14 ultimately, the responsibility for calibration of
- 15 equipment would be down to local area managers. So the
- 16 fire resistance laboratory would have hundreds of items
- 17 that required calibration, reaction to fire cables,
- 18 there are literally hundreds of instruments within just
- 19 my department that I was responsible for at the time
- 2.0 requiring calibration. It was a constant ongoing 21
- 2.2 Q. That I understand. But focusing on what you're told
- 23 here, in the middle of a challenge to a test result, you
- 2.4 would have remembered, surely, wouldn't you, whether or
- 25 not you did actually order the recalibration of the

- 1 cladding wall logger and the thermocouples that had been 2 used for this test?
- 3 A. I wouldn't have ordered it. It didn't fall directly
- 4 within my responsibility. It fell within the
- department's, but, as I said. I was responsible for the 5
- items that I used on testing for their calibration, but 6
- 7 the laboratories, each of the individual laboratories, 8
- and there was maybe five or six, were responsible for 9 the calibration of the systems in their own departments.
- 1.0 I wouldn't know whether a specific item of equipment,
- 11 unless I went down there and checked, was in
- 12 calibration .
- 13 Q. Coming back to my question, Mr Howard, why didn't you
- simply tell Kingspan that the test data for the 14
- 15 March 2014 test was not reliable because the cladding
- 16 wall logger and the thermocouples needed calibration at
- 17 that date and hadn't been recalibrated?
- 18 A. I don't know the answer to that. It may have been by
- 19 the time the report was issued, the system had been
- 20 recalibrated.
- 2.1 Q. But you don't know (inaudible)?
- 2.2 A. I haven't got that information to hand.
- 2.3 Do you remember telling any other test sponsors that,
- 2.4 between 24 September 2013 and June 2014, their tests may
- 2.5 not be reliable because the cladding wall logger and the

115

- 1 thermocouples in three places had not been recalibrated
- 2 on 24 September 2013 as required?
- 3 A. No, I don't recall that. I didn't make those
- 4 notifications.
- 5 Q. Why not?
- 6 A. Because, as I said, it would come down to when we were
- 7 aware and when the systems were recalibrated. If those
- 8 two dates were very close to each other, then you -
- 9 there's no -- we should make contact or we should have
- 10 made contact, but technically, if it's not going to
- 11 change the result, it's ... probably wouldn't do it.
- 12 Q. Let's go to {BRE00005596}, please, which is the document 13 I think we looked at before. We may need this in the
- 14 native version. There it is, thank you, we have that 15 there.
- 16 Now, can we please go to row 32, which I think is on the next page, page 2 $\{BRE00005596/2\}$. Row 32 seems to 17
- 18 be a chronology of what happened with this investigation 19 into the complaint between 8 May 2014 and
- 2.0 26 January 2016.
- 21
- First, can you just help me; who would have been 2.2 responsible for inputting the data that we see under 23
- 2.4 I don't know. That -- I would imagine that that would
- 25 sit with the QA department.

116

- Q. Was that Robbie Scott on this occasion?
- 2 A. I couldn't tell you specifically .
- 3 Q. Right.

4 Let's go down, then, if you look, please, at the
5 date 12 June, about a third of the way through the text,
6 it says 12 June — just to remind you, that's the same
7 day when you ask Robbie Scott, "What is inconclusive?"
8 in response to his 11 June email. Do you remember we

- 9 saw that before?
- 10 A. Yeah.
- 11 Q. As against 12 June 2014 it says:
- "Robbie Scott met with Stephen Howard. Report to berevised before being issued."
- Do you remember meeting Robbie Scott on that day or around that time?
- 16 A. I don't recall specifically, no.
- 17 Q. You have no reason to think, though, that you didn't, do 18 you?
- 19 A. No.
- Q. Again, it says, "Report to be revised before beingissued". Do you remember telling Robbie Scott, or
- perhaps him telling you, that the report needed to be revised before it was issued?
- 24 A. I don't recall that specifically .
- Q. Again, you can't deny that it happened, given that this

117

- 1 is a contemporaneous record, is that right, or do you deny it?
- 3 A. No, I don't recall that specific meeting.
- 4 Q. Can you tell us what parts of the report needed to be revised before being issued?
- 6 A. I think the only thing I can think of was the addition
 7 of comments into the observations, but, as I said, I've
 8 no specific evidence of that or recollection, or I can't
 9 remember whether that was from Robbie Scott or whether
- 10 that come from someone else.
- Q. In the next line down we see that, on 2 July 2014, you
 send the report through to Ivor Meredith. Do you see
 that?
 - "02/07/2014 Stephen Howard to Ivor Meredith. The report of the recent test."
- Now, again, you've got no reason to think that it wasn't sent on that day, do you?
- 18 A. No.

14

15

- 19 Q. No.
- Now, at this point, it's right, isn't it, that the complaint was still unresolved?
- 22 A. In terms -- well, as I said, in terms of QA, possibly,
- but Robbie Scott was absent over those periods of time,I believe .
- 24 I believe .
- $25\,$ $\,$ Q. Just looking at the document on the screen in front of

118

1 you, Mr Howard, you can see, can't you, that the

- 2 complaint was still open until January 2016, some
- 3 18 months later, but the bulk of the entries relate to
- 4 the period after July 2014, do you see, August 2014 and
- $\,\,$ 5 $\,\,$ into October and November of that year; you see that,
- 6 don't you?
- 7 A. Yeah
- Q. So the complaint was still unresolved when you sent thetest report to Mr Meredith; that's right, isn't it?
- 10 A Yes
- 11 Q. Do you know why the decision was taken to issue the
- report to Kingspan before the complaint was resolved?
- 13 A. Because of -- we'd had a contract in place, we'd been
- 14 requested for a test report, we were basically
- 15 completing that project, and the test report was
- 16 reporting a system that didn't meet the requirements of
- BR 135 and, as I said, the only way forward from there
- would be a report that did. So a test report that was
- 19 issued that in my view reflected the situation as it
- 20 was
- $21\,$ $\,$ Q. When you sent the test report to Mr Meredith on 2 July
- 22 as this record shows, why didn't you tell Mr Meredith
- $23 \hspace{1cm} \hbox{that the results were unreliable because the cladding} \\$
- 24 wall logger and the thermocouples had not been
- 25 recalibrated at the time of the test as they should have

119

- 1 been?
- $2\,$ $\,$ A. It would be dependent on when the loggers were
- 3 recalibrated . If they were recalibrated after that
- 4 date, then yes, I should have said something to them
- 5 regarding the calibration of the loggers. If the
- 6 loggers were recalibrated before that date, all that
- 7 calibration would have confirmed was that the loggers
- 8 were functioning correctly.
- 9 Q. I think you told us earlier -- just help me with this --
- $10 \hspace{1.5cm} \hbox{that you never saw any document between 6 June and} \\$
- 2 July 2014 to tell you that the test report could go
- out because the test data was reliable notwithstanding
- 13 the need for recalibration
- 14 A. I can't recall seeing that, no, but it may not have been
- recorded in that way, and if we could have a look at
- $16 \hspace{1cm} \hbox{those items of evidence, then we may be able to resolve} \\$
- 17 this
- 18 Q. We can look at the report itself, but you can confirm
- for us that it nowhere says, does it, at least
- $20\,$ expressly , that the system could not be classified to
- 21 BR 135?
- 22 A. No, the test report will not include any -- BS 8414
- doesn't include any pass/fail criteria , and therefore it
- is a statement on the test standard.
- $25\,$ $\,$ Q. Given that you knew that the test report might be used

5

7

14

15

16

17

18

19

2.0

21

3

3 black lettering or red lettering in bold at the bottom 4 or at the top so that anybody seeing it would realise 5 that this test report, in the opinion of the producer of that report, namely the BRE, was of the view that it 6 could not be classified to BR 135? 8 A. Well, there is a statement in the observations that 9 basically says the test was terminated at the point in 10 question. Now, the BS 8414 reports do not include 11 reference to the classification document in the BR -- we 12 do not record in the test report details of the 13 classification report, and that is the procedure across 14 all reaction to fire testing. The report is a statement 15 of fact as to what was tested to BS 8414, part 1 or 2. The classification can be BR 135 or it can be another 16

by Kingspan to obtain a BR 135 classification from

another test house, perhaps, why not simply add a bit of

that it didn't meet a certain document. I felt that the test report as issued was clear on the basis that it had not been tested for the full duration.

document. We wouldn't specifically put in a test report

Q. In fact, it's right, isn't it, that the test report
 simply records that the test ends at 43 minutes, doesn't

it? It doesn't, I think, actually say terminated.

A. I think it refers you to the clause in BS 8414 that thetest needs to go for the full duration.

121

- 1 Q. Somebody reading it would have to work out what had 2 happened. They would have to work out that it had been 3 terminated
- 4 A. (inaudible) read that from the associated standard, yes.
- 5 Q. Yes

6

2

17

2.3

Now, just going back to the document that I think we still have up in front of us, which is {BRE00005596/2}, the complaint log, you can see that Kingspan's complaint was simply closed in January 2016, in essence because they gave up the point.

Now, is that a fair way of summarising it?

12 A. I think we'd had — well, I recall that they were contacted a number of times across that period primarily, and I think that there is email evidence of us contacting to ask them whether they considered the report — complaint to be still open.

Q. Yes. We can look at this document, I think, for that,
 because it's a summary of the documents at the time.
 For example, look at 26 August 2014:

"Robbie Scott emailed Tony Millichap. Please respond if issues still unresolved."

Then 28 August 2014:

"Ivor Meredith, Kingspan emailed Stephen Howard and Robbie Scott. Are you any closer to resolving [the] complaint ... not directly related but I have

122

1 a telephone meeting with Sarah at BSI ..."

Et cetera, and then 21 October:

3 "Emailed Stephen Howard for an update since report 4 sent to Kingspan in July."

And then underneath:

6 "Mike Pratt assigned to investigate."

On 4 November.

Did you give Mr Meredith an update or Mr Scott an update, can you remember?

- 10 A. I can't recall. But the management or the procedural 11 process -- as I recall, the issue was going to be raised 12 at that BSI meeting.
- 13 Q. Look on, 4 November 2014:

"Stephen Howard replied. The complaint centred around standard interpretation and our position has been that this is the way the standard is interpreted and this is how it is applied. Robbie Scott was going to go back to Kingspan and say politely, if we have not received any further correspondence or submissions from them we will consider the complaint closed."

Pausing there, is that how it ended up?

- 22 A. Yes, I believe that's a fair summary of the complaint.
- No further correspondence or request was received by the
- Q. So basically, is this right: BRE stuck to its guns in

123

 $1 \hspace{1.5cm} \hbox{relation to its interpretation} \, , \, \, \hbox{Kingspan never pushed} \,$

2 the point further, and in the end the complaint was

closed?

4 A. No, the complaint was raised at the BSI committee, which

5 is referred to on 28 August. Now, I haven't got the

6 exact dates of that committee meeting, but they can be

7 obtained, and the issue and interpretation of the

8 standard would have been discussed at that meeting, and

9 as I understand it, because Sarah attended and I believe

10 that Ivor Meredith was invited -- I do not know who else

attended -- it would have been discussed at that point.

12 Q. Sorry, we spoke across each other. Did you attend?

13 A. No.

14~ Q. I imagine Sarah Colwell --

15 A. Yes

16 Q. Did she debrief to you after that meeting?

17 A. Yes

18 Q. What did she say?

A. I think that she relayed that it had been raised at theBSI committee meeting and the position that we took was

21 confirmed by the BSI committee.

22 Q. Right. Does that explain why we see no further --

sorry, let me put it again. Does that explain why, when

you reply on 4 November, you stick to your guns, so to

25 speak?

2.4

1 A. Well, we're not sticking -- well, we have interpreted carried out on an external wall system on 19 March 2014. 2 that we can't issue a BR 135 because the test hasn't 2 The system was described as a Kingspan K15 insulated 3 gone to full duration, and that has been confirmed by 3 system with a ventilated Trespa rainscreen." 4 the BSI committee responsible on which -- and 4 You can see there the components set out below it. ${\sf Kingspan} \ -- \ {\sf Ivor} \ {\sf Meredith} \ {\sf would} \ {\sf have} \ {\sf got} \ {\sf the} \ {\sf papers} \ {\sf for}$ If we go to page 11 {BRE00004066/11} then, please, 5 5 that as well. we can see the assessment, and you can see that the 6 6 7 Q. Are you aware that this test report has also now been 7 level 2 thermocouples are assessed in terms of their withdrawn by Kingspan and was withdrawn in October 2020? 8 8 performance, aren't they? 9 A. Yes. 9 A. Yes. 10 Q. Now, can we go to {BRE00004066}. This is a desktop 10 Q. Do you see table 1?: assessment report done by the BRE in relation to fire 11 11 "Temperatures measured at level 2 in tested 12 performance of the external wall systems at 190 Strand, 12 systems. 13 13 Westminster, London prepared for Total Façade Solutions, 14 A. Yes. 14 and the date is 29 June 2015. 15 If we look at page 2 $\{BRE00004066/2\}$, we can see 15 Q. In the table in the first column, you can see: "BRE report no. 293940 (BS 8414-2 test with Trespa 16 16 that the report was prepared by Andrew Russell and 17 authorised by you, and the date is 29 June 2015. 17 rainscreen cladding)." 18 If we look at page 5 {BRE00004066/5}, please, 18 Just to be clear, that's the one from 19 March 2014, 19 19 section 2 --20 A. Have we, on that assessment though, I've not signed 20 A. Yes, sorry 2.1 2.1 Q. Yes, that's the number I asked you to remember: 293940. that. 2.2 Q. Right. Are you saying you didn't sign off on this 22 Yes? 2.3 2.3 A. Yes document? 2.4 A. Well, I would -- there could be -- it could have been 24 Q. This is the report that we were talking about until me, it could have been others, but the version of the 25 two minutes ago. 125 127 1 report that you've got there is not the one that $\ensuremath{\mathsf{I}}$ have 1 Now, this report, this desktop report, doesn't 2 authorised. 2 anywhere refer to the fact that the test could not be 3 Q. Fair enough. 3 classified to BR 135, does it? Do you recall -- perhaps you don't, perhaps it's not A. Without reading -- no, I doubt whether it would, no. 5 a fair question -- signing off on the desktop assessment 5 Q. I'm grateful to one of my team who's managed to find for this project, 190 Strand? 6 a signed version of this. Perhaps I should show you the 6 one with your signature on it . $\ensuremath{\,\{{\rm BRE00004067/2}\}},\ensuremath{\,{\rm can}}$ we 7 7 A. I don't recall whether I signed it off. I do recall 8 8 just have that. There is your signature. this project. 9 Q. You do. Well, we will see if we can find you a signed 9 A. Thank you. 10 copy, but bear with me in the meantime. 10 Q. Now, it may be a while since you've seen this document, 11 Can we go to page 5 $\{BRE00004066/5\}$. This is 11 but take it from me that this report doesn't anywhere 12 "Scope", and it says: 12 refer to the fact that that test, the March 2014 test, "This assessment report considers the fire 13 couldn't be classified to BR 135. 13 14 performance of the external wall systems for 190 Strand, 14 My question is: why doesn't it? 15 15 Westminster, London against the criteria of BR 135. A. Because it's an assessment using data to draw 16 Third Edition if tested in accordance with 16 a conclusion on another system. There's no requirement 17 BS 8414-2:2005." 17 to -- or I'm not aware of any requirement to meet BR 135 18 So this is basically a desktop study done by BRE for 18 for the documents then to be used for the purposes of 19 Total Façade Solutions for that project; yes? 19 supporting data to perform a review. 2.0 2.0 A. Yes. Q. Have you ever come across a desktop report based on 21 Q. If we go to page 6 {BRE00004066/6}, we can see the basis 21 a test that couldn't be classified to BR 135 for the 2.2 of the desktop study, "Supporting data", and then if you 2.2 purposes of a cladding system?

23

2.4

2.5

Have I -- not that -- no, not that I'm aware, but

receive BR 135 classification to be used in

there's no requirement to test to -- for a product to

128

23

2.4

25

go down, you can see by paragraph 3.1:

"BRE test report no. 293940 Issue 1.

"A fire test in accordance with BS 8414-2:2005 was

- 1 an assessment report.
- 2 Q. Let's go back to page 11. We can do it on the signed
- 3 version $\{BRE00004067/11\}$. Here we've got table 1,
- 4 "Temperatures measured at level 2 in tested systems",
- 5 and there are the temperatures in accordance with
- thermocouples at level 2 in each of the systems. But 6 7 there is nothing there, is there, to tell you that the
- 8 report in the leftmost column, report number 293940, had
- 9 to be terminated early, is there?
- 10 A No
- 11 Q. Nor is there anything in there to tell you that, as
- 12 a result, it could not be classified to BR 135?
- 13 A. No, but, as I said, this is basically a technical review
- 14 of another system, and what you are doing is taking
- 15 evidence from other reports in support of the technical
- 16 arguments that you make to classify systems. There's no
- 17 absolute requirement for cladding systems to meet the
- 18 requirements of BR 135 -- to meet the recommendations of
- 19 BR 135 -- sorry, there is no requirement within or no 2.0 recommendations within ADB for the systems having to
- 2.1 meet BR 135. It's acceptable to use data from other
- 2.2 sources in support of your review.
- 2.3 Q. Do you accept that anybody reading this report, and this
- 2.4 assessment in particular within it, would be led to
- 25 believe that the system could in fact be classified to

129

- 1 BR 135, when in fact it couldn't?
- 2. A. No
- 3 Q. You don't?
- A. No, because it's -- the system that is being classified
- 5 will be summarised elsewhere in the document, and the assessment would be specific to that system. The 6
- 7 supporting data that you use to do that does not
- 8 necessarily have to meet the requirements of BR 135.
- 9 Q. So are you saying that a BRE desktop could just take 10 bits of test data from a test and then use that to
- 11 extrapolate to a desktop study for another project?
- 12 A. You potentially would use multiple reports covering
- 13 various tested combinations, and you may also use
- 14 reports from cavity barrier testing and things like 15 that. But all of the documentation and all the reports
- 16 that are referred back to are listed in the assessment.
- 17 Q. But what is there in this report to tell you that the
- 18 test done on 19 March on K15 with a Trespa rainscreen 19
- cladding had to be terminated early and therefore 2.0
- couldn't be classified to BR 135?
- 2.1 A. I don't imagine there's anything in that report to say
- 2.2 that, but that doesn't stop you using a test report with
- 23 test data in support of the -- to build a technical case
- 2.4 to assess the system.
- 2.5 Q. The technical case would be based on only part of the

130

1 picture, wouldn't it? Because although it may be based

- on accurate readings from the thermocouples during the
- 3 test, it would be omitting a critical fact, which is
- 4 that the test had to be terminated before the requisite
- 5 period was up.
- A. But the person undertaking the assessment would have had 6 7 visibility of the test report. You wouldn't do it
- 8
- 9 $\ensuremath{\mathsf{Q}}.$ The person undertaking the assessment is the BRE, isn't
- 10 it?
- 11 Α.

15

- 12 Q. Yes, and therefore my question is: why is the BRE, as
- 13 the person undertaking the assessment, not giving the
- full picture here, namely that although the temperatures 14
 - measured at level 2 in the tested systems reached these
- 16 temperatures for this test, the test had to be
- 17 terminated early and therefore couldn't be classified?
- 18 A. Well, as I said, you can use data in support of your
- 19 argument. If the data is from a test report that we
- 20 felt at the time was clear as to the restrictions on it,
- 21 then I can't see an issue with using data in support of
- 22 a technical argument to look at the -- to undertake $\,$
- 2.3 a desktop assessment on another system. It's fire test
- 2.4 data
- 25 Q. What argument?

131

- 1 A. Sorry?
- 2. Q. You refer to an argument. What argument are you talking 3 about?
- A. A technical review.
- 5 Q. Done by the BRE?
- 6 A. Well, the technical assessment of the system to be 7 classified
- 8 Q. I'm not sure I'm understanding your evidence, Mr Howard.
- 9 Do you accept that anybody, an architect or
- 10 a cladding subcontractor, reading this desktop report,
- 11 would look at it and think that the 19 March 2014 test
- 12 done with the Trespa was a sound basis for the
- 13 extrapolation exercise done by the BRE? Do you accept
- 14 that?
- 15 A. Yes
- 16 Q. And do you accept that it wasn't a sound basis, because
- 17 although the thermocouples showed those temperatures,
- 18 in fact the test had to be terminated early and couldn't
- 19 be classified to BR 135?
- 2.0 A. No
- 21 Q. You don't accept that?
- 22 A. No.

24

- 23 You're saying, are you, that it was a perfectly sound
 - basis to perform a desktop study on a failed test?
- 2.5 A. Yes, because it's used in conjunction with other test

11

- 1 evidence to construct your technical justification for 2 the acceptance of the system.
- 3 SIR MARTIN MOORE-BICK: Can I just come in here, Mr Millett?
 - If I've understood you correctly, Mr Howard, what you're saying is you're just using these earlier reports for the data they contain, which is related to certain times during the test, as one can see from them, and I think you're saying it's irrelevant whether they went on to or would have gone on to pass or fail, you're basically just taking the data; is that right?
- 11 A. You're using the data from the test report for 12 assessment purposes.

4

5

6

7

8

9

10

14

- SIR MARTIN MOORE—BICK: Yes. All right. Thank you. 13
- 14 MR MILLETT: Supposing during the 19 March test, having 15 achieved these thermocouple temperatures, the rig had 16 then exploded and burnt down the Burn Hall, would you 17 still use it as the basis of a desktop study?
- 18 A. It -- probably not, but it would be limited by the data 19 that you would achieve under that circumstance. Data is 20 data. What you select from that and what you use in 2.1 support of your argument, that -- all we are using is 2.2 the test data gained.
- 2.3 Q. Mr Howard, that would be fine if you identified the test 2.4 data for the 2014 test as limited to that test data, and 25 gave the reader a clear warning that that test in fact

133

- 1 was terminated and therefore couldn't be classified, and 2 then the reader would understand the basis of the 3 extrapolation. But I put the point to you again: aren't
- you misleading the reader when you don't give them the 5 full information but only part of it?
- 6 A. No, because the assessment is for a specific system. We 7 are not approving or -- sorry, we are not saying the 8 9 are BR 135 compliant, we are not saving anything other 10 than -- any other data that we've used in terms of 11 cavity barriers are compliant, we have not classified 12 those. You are using test data to produce a technical 13 argument in support of the system that you are
- 15 Q. It's not an argument, is it? It's an assessment.
- 16 A. A technical case, a technical submission.

assessing.

- 17 Q. It's not a case either. It's a statement, isn't it, of 18 appropriateness of extrapolation? You're telling the 19 reader that you can extrapolate from these three tests 2.0 and therefore safely build the system proposed for 21 190 Strand. Isn't that what the purpose of this is?
- 2.2 A. No, the purpose is to give an opinion that it meets the 2.3 requirements of BR 135 and, as I said, the data in the 2.4 test reports that are contained within are there to
- 25 justify that case. It doesn't -- the systems don't need

134

- to be BR 135 compliant, as I understand it.
- 2 Q. Is there any reason why you couldn't simply spell out in
- 3 the desktop, so that the reader could understand, the 4 fact that the test had to be terminated early and that
- 5 the system couldn't be classified to BR 135?
- A. Is there any particular reason? No, I don't -- there's 6 7 no reason but, as I said, the justification for using
- 8 the test report is for the data it contains.
- Q. Are you aware that this test report, 293940, even though 10 in fact the system did not meet the criteria in BR 135,
 - has been used in or as the basis for no fewer than 29
- 12 desktops in total?
- 13 A. I wasn't aware of the numbers but, as I said, it
- 14 doesn't -- if it's going into desktop assessments, it's
- 15 a set of data that you can then use, if it's going in to
- 16 fire safety engineers to justify the inclusion or the
- 17 construction of a cladding system. We are not saying
- 18 that that system complies with BR 135.
- 19 Q. Well --
- 20 A. -- system that we assessed in our view would.
- 2.1 Q. Mr Clark said in his evidence that he was shocked that
- 22 the test report from the March 2014 test, which was unclassifiable to BR 135, had been used in this way, in 23
- 2.4 other words in so many desktops.
- 25 Can you just explain -- perhaps you can't -- why he

135

- 1 would have been so shocked if it was a proper basis for
- 2. a desktop assessment?
- 3 A. Well, I don't believe that Phil Clark ever got involved
- in assessment, so, as I said, test data's test data.
- 5 That is what you -- what you are using is the
- 6 information contained within that report for your
- 7 technical assessment.
- 8 Q. So just before we close off on this, so I really
- 9 understand your evidence, are you saying that the BRE,
- 10 you, authorising this report, could just select any
- 11 piece of test data from the 19 March test and just
- 12 insert it into the assessment, and then say, "Well, 13 that's okay, that forms the basis of a proper
- 14 extrapolation in this desktop study"?
- 15 A. But you -- in a situation that you're in, you would
- 16 never use just a single report, but what you are doing
- 17 is basically assembling a technical justification for
- 18 the systems as assessed. I don't -- that is pretty
- 19 commonplace, and there's extended application rules,
- 2.0 there's — assessments go on to extrapolate data from
- 21 test reports. 2.2
- Q. Mr Howard, it may be my fault, but let me have one more 23
- 2.4 Why was the fact that the 19 March 2014 test 25 terminated early, meaning it was unclassifiable to

2 desktop study? 3 A. Because all you are -- because what you are not -- what 4 you are using is that report to construct a technical 5 argument to say a system meets the requirements of BR 135 in our opinion. Now, say -- there could have 6 been, without looking at the report and reading it in 8 detail, it's -- you are just using a test report, one of 9 three that are referenced in there. You could be using 10 five, you could be using ten test reports. It is to 11 construct a technical argument that a system that is 12 going to be installed complies with BR 135. Whether 13 that in the end meets -- whether the systems that you are using -- if the data within the desktop assessment 14 15 justifies that conclusion, then that conclusion is 16 instified 17 SIR MARTIN MOORE-BICK: Mr Millett, excuse me again, I'm 18 sorry to keep interrupting you. 19 Mr Howard, is your point, at least in part, this: 20 that you're not extrapolating from a single BR 135 or 21 test result data; you are using data derived from 2.2 a variety of different sources --2.3 A. Yes. 2.4 SIR MARTIN MOORE—BICK: -- in order to reach a conclusion and, as we've seen from the report we had on the screen

BR 135, irrelevant when it came to producing this

137

- 1 earlier, in this case it was data as to the maximum 2 temperature reached in a certain location within 3 a certain time?
- A. Yes. It's specific data.
- SIR MARTIN MOORE-BICK: And that goes into a melting pot, you I think are saying, with data derived from other 6
- 7 sources in order to draw conclusions?
- 8 A. Yes

1

- 9 SIR MARTIN MOORE-BICK: Yes, all right. Thank you very 10
- 11 Yes, Mr Millett.
- 12 MR MILLETT: Can you just help me with one thing. Can you go back to page 6 {BRE00004067/6}, please. You can see 13 14 that the first report on that page is the one we've just 15 been discussing, 293940, which was a steel-frame test 16 done under part 2; yes?
- 17
- 18 Q. This desktop assessment, what kind of cladding system 19 was this for?
- 2.0 A. If you read through, there should be a summary of the 21 assessed systems further down in the document.
- 2.2 Q. There is. 190 Strand, if you go to page 4 23 $\{\mathsf{BRE00004067/4}\}$, was going to be -- do you see that 2.4 there? -- a "stone faced precast cladding, brick
- 25 cladding, an aluminium rainscreen façade and a stone

138

- lattice framework with timber rainscreen panels". 2 Now, if you were asked to do a primary test on that 3 system, would you do it under part 1 or part 2 of 4 BS 84147
- A. It depends on what the -- it depends on how that's 5 constructed. You haven't got enough information on that 6 7 point to say.
- Q. Right. I think in fact it's a part 2, isn't it? If you 8 9 go to page 13 {BRE00004067/13}, I think we can answer 10 the question there. On page 13, "Conclusion", it says 11

12 "... the external wall systems for 190 Strand ... as 13 described in section 4, would satisfy the criteria of BR 135, Third Edition if subjected to a test in 14 15 accordance with BS 8414-2 ..."

16 So is the answer to my question that, in fact, this 17 was a part 2 structure?

- 18 A. Yes. I mean, what we're saying is -- or what the 19 assessment report is saying is it would meet BR 135 20 criteria if assessed to that standard, which is the --21 which is not the masonry substrate.
- 22 Q. No, indeed. So, therefore, can you just help me with 23 one thing. When you go back, then, to page 6 2.4 {BRE00004067/6}, you can see there the supporting data.
- 2.5 The first test is the one we've just been looking at,

139

1 which was indeed a part 2 test, 293940; yes? That was 2. indeed a part 2 test; yes?

(Pause)

- A. Yes, sorry, this is a part 2 test.
- 5 Q. Yes. Indeed.
 - If you go down the page, you see that the second piece of supporting data for it was one on 7 July, part 2 as well, but then you've also got at page 7 {BRE00004067/7}, item 3.3, a BRE test report number 220876, which was done under part 1. That's the
- 10 11 2005 test, isn't it?
- 12 A. Yes.

3

6

7

8

9

2.4

- 13 My question is: why are you using a part 1 test as the 14 basis of a desktop study designed for a part 2 system?
- 15 A. Because what you are doing is looking at materials'
- 16 performance and looking at the performance of the system
- 17 and using multiple data sets to understand the fire
- 18 performance of the system in writing the assessment
- 19 report. The data that is contained in those reports is
- 2.0 valid to perform a technical assessment of the system
- 21 that you wish to assess.
- 2.2 I now want to look at a different topic, which is how 23 Kingspan's marketing literature and the results of the
 - BS 8414-1 test in 2005 were being viewed by the market.
- 25 Can we look first, please, at an email exchange in

1 2013 between you and a gentleman called Wesley Bourne. 2 This is {BRE00003529}. You can see there that on the 3 first page of that there is an email of 19 March from 4 him to you, Wesley Bourne, Far East Global, and the attachment is "Kooltherm K15 Rainscreen Board" as a pdf. 5 6 He says:

"Hi Stephen.

7

8

9

10

11

12

13

14

15

16

17

18

19

2.0

"Please find attached for your perusal technical literature off the Kingspan website relating K15 KOOLTHERM, it appears to satisfy BS8414 and BR135 for buildings above 18metres in height.

"Per our discussion this afternoon, we look forward to your favourable feedback after you confer with your colleagues in relation to our project specific details. Should you require anything further please don't hesitate to contact us "

Attached to that email -- I'll show it to you -- is a copy of the ninth edition of Kingspan's marketing literature for K15 from March 2011. Can I show that to you. That's at {BRE00003528}.

21 First of all, do you remember receiving Mr Bourne's 22 email and opening it and seeing this document?

- 2.3 A. No, I'm afraid not, I don't recall that.
- 2.4 Q. It's a document issued in March 2011 by Kingspan and it's called "Kooltherm K15 Rainscreen Board, insulation

141

- 1 for rainscreen cladding systems". Is it a document that you think you were familiar with from that time, or at 2 3 least from 2014 onwards, when you became in charge of
- 5 A. I think to say for me -- no, I wouldn't say I was 6 familiar with that document.
- 7 Q. Right.

8

9

10

11

12

13

14

15

19

2.0

I'll show you the text in a moment, but perhaps, actually, before we leave the document, just look at it. Third bullet point down it says:

"Successfully tested to BS 8414:2002, can meet the criteria within BR135 and is therefore acceptable for use above 18 metres."

Now, when you got Mr Bourne's email, do you think you opened this document and read that?

- 16 A. I can't recall doing so, no.
- 17 Q. Had you done, what would your reaction have been?
- 18 A. Erm ...

(Pause)

I'm not sure, really, looking at that.

2.1 Q. Well, that's a guarded way of putting it, if I may say 2.2 so. I would suggest to you that your reaction would be 23 that that is a misstatement, because the fact that 2.4 an insulation product had successfully tested to BS 8414 25 was acceptable for use above 18 metres --

142

- 1 A. But it does say "can", doesn't it? It doesn't say 2 "does", it says "can meet the requirements of BS 8414".
- 3 $\mathsf{Q}.\ \ "\dots$ and is therefore acceptable for use above 4

18 metres "

5 Would that not have struck you at the time, if you had looked at this, as a misleading statement, because 6 7 it suggests that it could be used on any building over 8 18 metres?

9 A. I wouldn't read that as -- I would read that as there is 10 a qualification in there saying, "Successfully tested to 11 BS 8414:2002, can meet the criteria within BR135". It 12 doesn't say "does meet the criteria" as a standalone, it

13 says "can meet the criteria within BR135". 14 Q. I was just trying to direct your eye to the last part of

15 the sentence, which says "and is therefore acceptable for use above 18 metres", that part of the sentence; 16 17 would that not have struck you as a misleadingly

18 extravagant claim?

- 19 A. No. it doesn't -- it ...
- 20 Q. No?

5

6

7

8

9

17

18

19

2.0

2.1

- 2.1 A. I think in the light of current circumstances, yes, it's
- 22 not the sort of material you should put out, but in
- 23 context of when this was going around and looking at
- 2.4 the -- it's a qualified statement, or I read that as
- 25 a qualified statement. It's not saying it does meet the

143

- recommendations of BS 8414, it says it can meet, under 1 2 certain circumstances
- 3 Q. Let's go to {BRE00003530}. You will see that you respond to Mr Bourne, and you say:

"Wesley,

"In our opinion you need to test to BS 8414. But ultimately the decision and responsibility rests with building control, building owners etc. I think these parties need to be consulted on this issue.

10 "The system you have described to me is different to 11 that supplied on the PDF. BS 8414 is a system test and 12 therefore provides evidence that the system complies with BR135. It cannot be assumed that if a system has 13 14 reached an adequate performance to be classified to 15 BR135, that individual components will perform the same 16 way in a different construction."

Now, by this date -- this is March 2014; in fact, it's the day after the Kingspan Trespa test, by coincidence -- was it your experience that Mr Bourne's interpretation of Kingspan's sales literature was typical of the market?

- 2.2 Not -- well, not by that stage, no. I think it was just 23 slightly later than that.
- 24 Right. When was that, do you think?
- 2.5 A. There was a meeting with the NHBC, which I think that

13

3

- 1 was when it \dots there was obviously -- or, as 2 I understood it, reports were being accepted without 3 BR 135s Q. Right. When was that? 4 5
- A. I think I've raised that in my evidence, so there would be a date on that meeting. 6
- 7 Q. There are lots of meetings with the NHBC. Was this 8 a meeting you --
- 9 A. -- one in my evidence, I believe.
- 10 Q. I see.
- 11 Did it come as a surprise to you at that stage to 12 learn that the market was interpreting Kingspan's 13 marketing claims in the way in which Mr Bourne has
- 14 reflected here? 15 A. Well, as I've said, there's no -- BRE -- sorry, Approved Document B's advisory, so there's no absolute 16 17 requirement to test and get classified to BR 135, which
- 18 is why the reference is back to the building owner and 19 building control. I think there was a perception within
- 2.0 BRE that there was a lot of systems going on to walls
- 2.1 without testing and without BR 135, but ultimately it's 2.2 not a regulatory requirement, it's advisory.
- 2.3 Q. Well, when you say it's not a regulatory requirement, 2.4 it's advisory, it's guidance within the regulation; it 25 guides you as to how to comply with a mandatory

145

- 1 obligation.
- 2. A. But it also says in the introduction --
- 3 Q. Sorry, do you agree with me: it's guidance which guides you as to how to comply with a mandatory obligation; 5 yes?
- A. It's guidance, but it makes it quite clear in the 6 7 introduction to even the latest version of BRE —— sorry, 8 ADB, that it's acceptable for other sort of like routes 9 to demonstrate compliance. It's not -- BR -- BS 8414
- 10 and BR 135 is not the only route to compliance with ADB. 11 Q. Sorry, let me just be clear about this. At the time, 12 this is spring 2014 -- I'd assumed that you understood 13 this, but maybe just help me -- you couldn't use 14 insulation above 18 metres unless either it was 15 a material of limited combustibility or had passed the 16 criteria in BR 135 and had been tested under the 17 methodology in BS 8414.
- 18 A. But that is from Approved Document B, which is guidance.
- 19 Q. I see. So you're saying that it's only guidance and 2.0 didn't have to be complied with?
- 21 A. Well, it says in the document itself that there's other 2.2 routes to demonstrate compliance with the
- 23 Building Regulations. It's not the only route -- sorry,
- 2.4 this is quite ...
- Q. Well, what other routes? If it's not a material of 25

146

- limited combustibility, and hasn't passed a full system
- test, what are the other routes to compliance, apart
- 3 from a holistic fire engineering study, which we
- 4 understand --
- A. Well, it could be holistic fire engineering, it could be 5 desktop assessment, it could be the use of other data to 6 7
 - justify the use of the product on the building.
- Q. What's that, then, the use of other data to justify the 8 9 use of a product on the building? What system or route 10 to compliance is that?
- 11 A. Well, as I said, BS 8414, you could potentially use
- 12 a cladding test from another part of the world as your
 - justification for submission to building control. As
- I said, ADB is advisory. There could be fire 14
- 15 engineering solutions, there could be desktop
- 16 assessments, people could have accepted fire resistance
- 17 tests on the outside of the system if properly 18 conducted
- 19 Q. Just coming back to the point, then, on the email in 20 front of us, we've got a customer in the market asking 21 you in the BRE the question he's asked, I've shown you
- 22 that, and you've given him an answer. 23 My question to you was whether it was your
- 2.4 experience that Mr Bourne's interpretation of what
- 25 Kingspan were telling the market about the usability of

147

- 1 K15 was typical of the market, and your answer was not
- 2 until a later meeting with the NHBC. That's your
 - evidence so far, is it?
- A. Yes. I think really the point at which it -- well, we
- 5 understood it was obvious that there was a lot of
- 6 systems going on to buildings without BR 135s, but it
- 7 was at a later meeting when the terms of those -- that
- 8 acceptance ... yeah, it become apparent that people were 9 not asking for BR 135s.
- 10 Q. Were you concerned at the time that Kingspan were
- 11 marketing K15 as a product suitable for use over
- 12 18 metres, rather than making it clear that K15 when
- 13 used in a specific system only could be used over
- 14 18 metres?
- 15 A. No, I wasn't overly concerned. That concern was later.
- 16 At that time, no, I don't believe I was concerned.
- 17 Q. Right.

2.0

- 18 Let's look at the document again, {BRE00003528}, and
- 19 see if there are any other aspects of the literature
 - which caused you concern at the time.
- 21 If you look at the third bullet point down.
- 2.2 "Successfully tested to BS 8414:2002", were you not
- 23 concerned that Kingspan didn't make it clear that the
- 2.4 test was only to BS 8414-1?
- 25 A. No, I wouldn't -- as I said, I don't recall reviewing

- 1 this document in detail.
- 2 Q. Were you not concerned that Kingspan were implying here
- 3 that they had a BR 135 report for a system incorporating 4 K15 when in fact they didn't?
- 5 A. Well, at that time, no. I've not reviewed this document
- on that basis and I wouldn't have had a knowledge of all 6 7 the tests that Kingspan had undertaken. As I said, it
- 8 was something that's sent through to you --
- 9 Q. Did you not --
- 10 A. -- as I said, I don't recall seeing this or reviewing it 11 in that level of detail.
- Q. Did you not think to yourself: oh, I wonder where they 12
- 13 got a BR 135 classification from? This is March 2014.
- 14 This is 18 months before you classified it, don't
- 15 forget. At that time, did you not wonder where they got
- 16 a BR 135 classification from?
- A. Yeah, but there's an assumption there that the BS 8414 17
- 18 test to 2002 was the only one that was conducted, and
- 19 I was aware that there was quite a lot of other testing
- 20 going on. I didn't have a list of tests in front of me
- 21 that BRE -- that Kingspan would have tested or --
- 2.2 there's no reference to a specific test there.
- Q. Were you not concerned that Kingspan were saying that 2.3
- 2.4 K15 as a product could meet the criteria in BR 135 when
- 25 in fact it's not a product test at all?

149

- 1 A. No, because it says it can meet. It doesn't say it does
- meet, it says it can meet, and I took that as reading in 2
- 3 there as a qualified statement.
- Q. Did you read the whole of this document?
- 5
- Q. Did you read the whole of this document? 6
- 7 A. No. I doubt it.
- 8 Q. Right. You wouldn't have been aware that it says that
- 9 K15. "when subjected to [BS 8414] ... achieved the
- 10 result shown", later on in the document at page 6 11 {BRE00003528/6}
- 12 A. I wouldn't have reviewed this document in detail. It
- 13 depends on what questions I was being asked by the
 - client, and I think I've referred him back to the route
- 15 that he needs to take to comply.
- 16 Q. Do you agree with me, looking at it now, that this was
- 17 a thoroughly misleading document in a number of
- 18 respects?

14

- 19 A. I think it should have been better qualified and it
- 2.0 should have been more accurate. It should give the
- 21 standard number and there should maybe be a note in
- 2.2 there to say -- make it clearer the circumstances under
- 2.3 which the product could be used and meet BR 135, but, as
- 2.4 I said, at the time I don't really remember reviewing
- 25 this in detail or seeing it.

150

- 1 Q. Let me just push the point. I'm suggesting to you that
- 2 it's a thoroughly misleading document, among other
- 3 reasons, because it presents K15 as a product which has
- achieved a pass under BS 8414, which is not a product 4
- test at all . Do you accept that? 5
- A. No, I think it says successfully tested to BS 8414 and 6
 - can meet the criteria within BR 135.
- 8 Q. Do you accept that it's --9 A. Under a certain qualified system, that statement's true.
- 10 $\ensuremath{\mathsf{Q}}.$ Do you accept that it's misleading when it says it is
- 11 therefore acceptable for use above 18 metres without any
- 12 qualification?
- 13 That statement needs to be qualified, and I accept that,
- 14 and if reviewing this, that would have been my comment,
- 15 really, that that should have been a qualified
- 16 statement
- 17 Q. And as unqualified, it's a thoroughly misleading
- 18 statement: do vou accept that?
- 19 A. Well, I wouldn't call it thoroughly misleading; it's not
- 20 as clear and concise as I believe it should be.
- 21 Q. Did you discuss this marketing literature with Kingspan
- 22 at all?
- 2.3 A. No.
- 2.4 Q. Why is that?
- 2.5 A. Because, as I said, I doubt whether I gave this

151

- 1 a thorough review. It was possibly a scan through. The
- 2 question was back to the client, there was an email
- 3 exchange with the client which is quite difficult to
- remember, so I doubt whether I've read this in detail.
- 5 Q. Did you discuss this piece of marketing literature with
- anyone internally within the BRE? 6
- 7 A. No. I don't believe so.
- MR MILLETT: Mr Chairman, it's now just gone 3.15. I'm 8
- 9 going to turn to a different document, but it's about
- 10 the last document in this run before we turn to
- 11 a different topic, so -
- 12 SIR MARTIN MOORE-BICK: Do you want to take the document
- 13 now? How long is it going to take?
- 14 MR MILLETT: Five minutes, probably, it depends on various
- 15 things
- 16 SIR MARTIN MOORE-BICK: If you're going to go to a new topic
- 17 afterwards, let's do the document first, shall we?
- 18 MR MILLETT: Yes, thank you.
- 19 Can we go to {BRE00003397}, please. This is
- 2.0 an email from Tony Baker to you, and it's dated
- 21 24 July 2013:

2.2

- "Hi Andy.
- 23 "Strangely enough me and Steve have just come out of
- 2.4 a meeting with Wintech and this project was mentioned,
- 25 or one very similar. I would need more info on the

1		through system build up before commenting but in general	1	SIR MARTIN MOORE-BICK: Welcome back, everyone. We're going
2		the answer would be no unless the system to be assessed	2	to continue hearing from Mr Howard.
3		was very similar to that tested. I believe the test	3	Are you there, Mr Howard? Can you hear me and can
4		data available from KS would be very limited and the	4	you see me?
5		market is starting to get very confused through clever	5	THE WITNESS: Yes. You're not full screen. That's it.
6		marketing by KS. I know Norman did an assessment some	6	SIR MARTIN MOORE—BICK: Are you full screen again now?
7		time ago but from what I can recall it was an enclosed	7	THE WITNESS: Full screen again now.
8		system but from what we understand today it wasn't built	8	SIR MARTIN MOORE—BICK: The one technical problem I was able
9		in accordance with the assessment!	9	to solve. Good.
10		"Cheers Tony."	10	Are you ready to carry on?
11		Do you remember this email?	11	THE WITNESS: I am, thank you.
12	Δ	No.	12	SIR MARTIN MOORE—BICK: Thank you.
13		Can you help, do you know what the "clever marketing"	13	When you're ready, then, Mr Millett.
14	۷.	was that Mr Baker was talking about?	14	MR MILLETT: Yes, Mr Chairman.
15	Δ	I don't, really.	15	Can we go to your witness statement, please, at
16	Q.		16	page 4 {BRE00005771/4}. I'm turning to a new topic, and
17		I don't recall.	17	I want to ask you about paragraphs 17 and 18. These two
18	Q.		18	paragraphs appear under the question Q2(a):
19		Yes, I believe I'd have read such an email.	19	"What advice or guidance, if any, does or should the
20		Were you not interested to know why the market was	20	BRE give to test sponsors in respect of the design and
21	Q.	-	21	installation of test rigs for BS 8414 testing?"
22		starting to get very confused through clever marketing by Kingspan?	22	
23	۸	Well, I think there was ongoing discussions at the time,	23	At paragraph 17 you say: "BRE does not, and should not, provide any advice on
24	Α.	but it depends on what that marketing was saying, and	24	the design or installation of the cladding system other
25		I can't really remember the sort of ongoing discussions	25	
23		r can't really remember the sort of ongoing discussions	23	than as necessary for the safe construction of the test
		153		155
1		with Tony or others over Kingspan marketing material.	1	sample and compliance with the specimen requirements of
2	Q.	It's clearly been raised as a concern by Tony Baker	2	the test standard. Indeed, those involved in testing
3	·	internally within the BRE. Did you take any steps to	3	are not permitted — by BRE's accreditation provider,
4		investigate what it was that the market was getting	4	UKAS — to offer any such advice and/or consultation
5		confused about as a result of Kingspan's clever	5	services ."
6		marketing, Mr Howard?	6	Then you say in paragraph 18:
7	Α.	I don't recall doing so, no.	7	"In this respect, UKAS audits BRE for compliance
8		Why is that?	8	with ISO 17025 (for the testing laboratories) and
9		Because we are —— because ultimately I'm not sure	9	ISO 17065 (for the certification services) respectively.
10		that —— we are providing and supplying into	10	These are internationally recognised standards for such
11		a professional market. I wouldn't question how confused	11	activities . As BRE is a European 'notified body', there
12		architects and building control are over that material.	12	are rules associated with this as well. These standards
13		As I said, it was only later that concerns over what was	13	require BRE to have rules in place to maintain its
14		being accepted and what base —— that I started to have	14	impartiality and integrity; these are backed up by BRE's
15		concerns over what was being accepted on what basis.	15	procedures. The information which BRE obtains in
16	MF	R MILLETT: Mr Chairman, is that a convenient moment?	16	relation to cladding tests is acquired from running
17		R MARTIN MOORE-BICK: Yes, certainly.	17	tests for clients (who pay for those tests), as such, if
18		Mr Howard, we'll have a break now. We will come	18	BRE's testing staff were to then become involved in
19		back at 3.35, please, and no talking to anyone about	19	direct consultancy, they could be divulging confidential
20		your evidence over the break, please. All right? We'll	20	information. This risk is managed by preventing testing
21		see you a bit later.	21	staff from undertaking consultancy work."
22		Thank you very much.	22	Now, you also say in your statement, I should say,
23	(3.	20 pm)	23	at paragraph 9 {BRE00005771/2} — there is no need to
	•	(A short break)	24	scroll back to it —— that the BRE is an independent and

25

 ${\it accredited testing \ laboratory}\,.$

25

(3.35 pm)

- Is it part of your accreditation by UKAS that you're 2 required to meet the standard ISO 17025? 3 A. Yes, that is what you are audited against. 4 Q. Its full title, I think, is BS EN ISO 17025: 2017. 5 A. That would be, yes, one of the later versions. Q. That was the later version, and there was a previous one 6 7 I think in 2005, wasn't there? A. I wouldn't know if ... 8 9 Q. Let's look at this a little bit more closely. 10 $\{ \mathsf{BSI00001726} \},$ please, and this is the 2005 version of 11 ISO 17025. That's the first page of it, and it 12 incorporates corrigendum 1, which I think was from 2006. 13 Am I right in thinking that this version would have 14 been in place throughout the period 2005 to 2017? 15 Q. Can we look at page 12 $\{BSI00001726/12\}$, please. Let's 16 17 look at clause 4.1.4 under the heading "Management 18 requirements", 4.1, "Organization", and 4.1.4 says: 19 "If the laboratory is part of an organization
 - 157
- Then if we go on to page 13 {BSI00001726/13} —
 bottom of page 12, top of page 13 you can see under
 clause 4.1.5(d):
 "The laboratory shall ..."

performing activities other than testing and/or

calibration, the responsibilities of key personnel in

the organization that have an involvement or influence

on the testing and/or calibration activities of the

laboratory shall be defined in order to identify

potential conflicts of interest."

- That's how it starts, and then (d) says, it's the third one down:
 - "d) have policies and procedures to avoid involvement in any activities that would diminish confidence in its competence, impartiality, judgement or operational integrity."
- 11 Do you see that?
- 12 A. Yes.

2.0

21

22

2.3

2.4

25

5

6

7

8

9

10

- 13 Q. So when we talk about the BRE's impartiality in this 14 context, is this what we are referring to?
- 15 A. Yes.
- Q. At all times from 2006, and certainly from 2014 when you
 became more involved in cladding at the BRE, were you
 conscious that the BRE should have policies and
 procedures in place for this purpose?
- 20 A. Yes.
- Q. To the best of your knowledge, were policies and
 procedures in place which ensured that the BRE's testing
 activities were carried out impartially and with
 operational integrity?
- 25 A. Yes.

158

- 1 Q. What were they?
- 2 A. Sorry?
- 3 Q. What were they?
- A. There was a standard of operating procedures that were
 available, there was lab—specific operating procedures
 within that period, there was codes of conduct for staff
- 7 as well.
- 8 Q. Were those procedures monitored?
- 9 A. I'm not sure I understand the question, really .
- 10 Q. All right. Did anybody have particular responsibility
- 11 for ensuring that those procedures were followed?
- $12\,$ $\,$ A. Well, the -- you were subject to internal audits in the
- 13 labs. Obviously line management would have
- 14 a responsibility for the staff within their -- who they user supervising.
- $16\,$ $\,$ Q. Yes. So the line manager of, for example, Phil Clark
- 17 would be responsible for ensuring, would he, or she,
- 18 that, for example, Phil Clark -- and I just identify him
- 19 as an example -- would avoid involvement in activities
- 20 that would diminish confidence in the BRE's competence,
- impartiality, judgement or operational integrity?
- 22 A. Yes.
- 23 Q. And you were Phil Clark's line manager, weren't you, at
- 24 least --
- 25 A. Not until 2014, maybe, 2015, something like that.

159

- 1 Q. My question perhaps you didn't pick up the end of
- 2 it -- was: at least from 2014.
- 3 How did you go about monitoring or enforcing or
- supervising Phil Clark's compliance with the obligation
- 5 to avoid involvement in the activities we've seen
- 6 identified in the standard?
- $7\,$ $\,$ A. It's difficult to recall , really . There was a lot of
- 8 effort $\,--$ emphasise placed on team meetings and there
- 9 was training available for staff, and I believe that BRE
- 10 offered training in those sort of areas, but I can't
- 11 remember any specific activities I undertook with
- Phil Clark with that.
- $13\,$ $\,$ Q. Phil Clark told us in his evidence -- and it's
- $\{Day97/88:23\}$ to $\{Day97/89:3\}$ for the record -- that he
- $15 \hspace{1cm} \hbox{never received any training on impartiality or, in} \\$
- particular , where the line was to be drawn between
- acting impartially and the giving of consultancy or
- advice. That was his evidence. Is he right about that?
- 19 A. Well, for the record, it would be possible to check his
- training records and see what courses he attended
- 21 internally .
- 22 Q. Well, I --
- 23~ A. But not -- my impression was he understood -- sorry,
- $24\,$ it's very difficult , because we're talking over, so \dots
- 25 Q. I'm asking you: is he right? Did he never receive any

13

15

- 1 training? That's his evidence. He says he never
- 2 received any training on where the line was to be drawn
- 3 between acting impartially on the one hand and giving
- 4 consultancy or advice on the other. I'm just asking 5 you: is he right?
- A. I'm not aware of specifically any training he was given, 6
- 7 but I would suspect he would have been given training at
- 8 some point and BRE should be able to produce details of 9 that.
- 10 Q. Did you yourself ever receive any training of that 11
- nature? A. Erm ... I can't recall, really. But it may have been --12
- 13 I believe I have had discussions with people, advice
- from more senior members of staff throughout my career, 14
- 15 because I've worked in both certification and testing,
- 16 that you don't divulge confidential information.
- 17 Q. Did you ever have any specific training on what
- 18 constituted advice or consultancy on the one hand --
- 19 A. I can't recall.
- 20 Q. — as opposed to simply conversations, chitchat,
- 2.1 observations on the other?
- 22 A. I can't recall . As I said, BRE should have training
- 2.3 records for specific individuals.
- 2.4 Q. You can't recall. Is it that you can't recall one way
- 25 or the other, or, as you sit here today, you don't

- 1 remember ever receiving any such training yourself?
- 2 A. I don't remember ever receiving such training, but it
- 3 was part of the culture there and part of your
- procedures that you didn't divulge confidential
- 5 information and you endeavoured not to offer advice.
- Whether that was from a specific training course, 6
- 7 I can't recall whether that was given or whether it's
- 8 historic over a number of years through exposure to
- 9 colleagues, senior colleagues or whatever. I cannot
- 10 actually state categorically that I attended a course at
- 11 BRE on that subject.
- 12 Q. If that's the case, and you can't recall ever receiving 13 any training of that nature, how did you go about your
- 14
- task of supervising Phil Clark and making sure that he
- 15 staved the right side of the line when dealing with
- 16 clients?
- A. I think the general instruction was not -- try not to, 17
- 18 or not to engage in conversations talking about
- 19 competitors' products, talking about offering advice as
- 2.0 to an opinion as to what would pass. As I said, as
- 21 a culture in a place that you worked, it was pretty much
- 2.2 the norm, and it was one of those that it was the done 2.3
- thing, working in both certification and testing, or 2.4 even a lot of the testing that you deal with outside of
- 25

162

UKAS is all highly confidential . It's not something you

- should discuss.
- 2 Q. You say the general instruction; was that general
- 3 instruction written down so that each BRE employee
- 4 involved in a test would know to the letter what to do
- 5 and what not to do?
- A. There was a code of conduct that was issued to the 6
 - staff, which is probably worth reviewing. That's not in
- 8 my evidence, because it wasn't actually prepared --9 asked in this, but there was definitely codes of conduct
- 10 with instructions of information on what staff should
- 11 and shouldn't do.
- 12 Q. Right. Let's look at that and let's see how far we go.
 - Could you go, please, to {INQ00014067}. This is
- 14 a document dated 24 March 2017, BRE Global publication,
 - revision 0.1, can you see that?
- 16 A Yeah
- 17 Q. It's a statement of impartiality, and it says,
- 18 "Statement of Impartiality" at the top.
- 19 Now, I'm going to show you some of the details in
- 2.0 this document in just a moment, but when you referred to
- 21 a code of conduct just a moment ago in your evidence,
- 22 were you referring to this document?
- 2.3 A. No, there was another one that was signed by members of
- 2.4 staff

3

5

12

25 Q. Oh, I see.

163

- 1 You can see that the date of the publication of this
- document is 24 March 2017. Was there a precursor to 2
 - this document, an earlier document?
- A. I don't know specifically. I would imagine. I would be
 - surprised if there wasn't.
- 6 Q. Right. Okay. Do you know what prompted the publication
- 7 of this document?
- 8 A. It might have been the change of the standard, because
- 9 the dates of the standard, you got a new ISO 17025
- 10
- 11 Q. I see
 - Let's just look at this. It says "Publication".
- 13 What committee or group of people within the BRE would
- 14 decide whether a document such as this should be
- 15 published?
- 16 A. This would be at board level.
- 17 Q. Right.
- 18 A. (inaudible) quality system.
- 19 Q. Did you sit on that board?
- 2.0 A. No.
- 21 When it was published, do you think you would have seen
- 2.2 it at the time or very shortly after it was published?
- 23 There would have been notifications out for issuing of
- 2.4 those sort of QA documents, quality documents, yes.
- 2.5 Q. Now, you mentioned the code of conduct a moment ago.

7

8

9

13

Let me see if we can identify that from the record. Is 2 this the document at {BRE00005388}? Let's have a look. 3 4 Q. Okav. When did that document come into force? When was 5 it first used, to the best of your recollection, within 6 7 A. I wouldn't know. It was quite -- maybe in 2000 --8 between 2000 and 2010. 9 Q. Just scanning down that document, there's clearly 10 an undertaking to comply with, among other things, the 11 ethical requirements of BRE certification. But just 12 help me with it: I don't think we see in there any clear 13 undertaking not to give advice or act as a consultant in 14 any way to your client. Am I right about that or am 15 I wrong about that? A Well 16 17 "To treat as confidential all information received 18 or obtained while performing duties for BRE 19 Certification and not to divulge such information for 20 personal advantage." 2.1 Possibly it could be within that one. 2.2 Q. Okay 2.3 Can we go back, then, to the statement of 2.4 impartiality we were looking at a moment ago, the last 2.5 document, {INQ00014067}. Were you involved at all in 1 the decision to publish this document? 2. A. No. 3 Q. Were you involved at all in its drafting? 4 A. No. 5 Q. Can we take it that, nonetheless, you agree with the

- 6 principles set out in it?
- 7 A. Yes.

10

11

- Q. Now, the principles set out in it are quite broad. 8 9 For example, if we look at paragraph 2:
 - "BRE Global also recognises the following potential threats to impartiality.
 - And there is a list of them set out there.
- 12 13 Did you ever receive any further guidance in 14 relation to how to maintain impartiality other than that 15 set out in the code of conduct we've seen or this
- 16 statement of impartiality?
- A. I can't remember specific training but, as I said, it 17 18 was part of your day-to-day work that you kept things 19 confidential, avoided giving advice. It was just known 2.0 as a no-go area, really, but I can't remember specific 21 training
- 2.2 Q. Looking at paragraph 3 it says:
- 23 "BRE Global has therefore established a 'Committee 2.4 for safeguarding impartiality whose primary function 25 is:-

166

- "a) to assist in developing the policies relating to the impartiality of our certification activities
- 3 "b) to counteract any tendency on the part of BRE 4 Global to allow commercial or other considerations to 5 prevent the consistent objective provision of our 6 certification activities,
 - "c) to advise on matters affecting confidence in certification, including openness and public perception,
- 10 "d) to review the impartiality of the audit, 11 certification and decision making processes of the 12 certification business of BRE Global ...'
 - I've read all that to you.
- 14 In relation to the committee that's referred to 15 there, who was on that committee from this time, 16 March 2017?
- 17 A. I don't know. The sign-off for those, it would have 18 been the responsibility of the compliance department to 19 draft and produce those documents, so who was actually 20 involved in that I wouldn't know prior to publication.
- 21 Q. I see
- 2.2 Looking at item 3(b):
- "To counteract any tendency on the part of BRE 23 2.4 Global to allow commercial or other considerations to 2.5 prevent the consistent objective provision of our

167

- certification activities ." 1
- 2 Had there been a concern before March 2017 that the 3 BRE had been allowing commercial or other considerations to prevent the consistent objective provision of 5 certificates?
- 6 A. None that I was aware of, but can I ask that maybe
- 7 this -- the date of publication of this document and the 8 reasons for doing so? Maybe that's something that BRE 9
- can address, because I haven't got the background or 10 knowledge of the reasoning for the re-issue of that
- 11
- 12 Q. What about (d), lack of impartiality in the audit, 13 certification and decision-making processes of the certification business of BRE Global? Had there been 14
- 15 a concern about that?
- 16 A. No.
- Q. Has the committee ever had to consider you or your work 17 18 during the time you had at the BRE, at least from 2014 19 onwards?
- 2.0 A. No.
- 21 Q. Can we look at {BRE00003670}, please. This is an email 2.2 exchange in July 2014 between the BRE and Kingspan 23 regarding LPS 1581 and BS 8414-2 assessments.
- 2.4 If we go to the bottom of page 2 $\{BRE00003670/2\}$, we 2.5 can see there is an email from Ivor Meredith to you and

18

19

2.0

Damien Ward of 10 July 2014. Do you see that? If you could go on from the bottom of page 2, it goes on over a few pages, to page 4 $\{BRE00003670/4\}$. At the top of page 4, item 9, it says:

"Finally we wish to progress the next two tests at your earliest convenience however have requested some feedback off Stephen Howard as to the best way to test going forward. Stephen can you please advise how soon we can look at this?"

If we go back to page 2 {BRE00003670/2}, we can see your response to Ivor Meredith on 11 July. At page 2 you say. "See below. Stephen Howard", and that indicates, I think, that you have responded to his various queries by commenting in his email in text highlighted in yellow; is that right?

16 A Yes

1

17 Q. I see

> So just following it down, then, bottom of page 2. where it savs:

"Ok - the quote is straightforward ..."

That's you, is it?

2.2 A. Yes.

Q. I see. So then if we go back to page 4 {BRE00003670/4}, 2.3 2.4 under item 9, it's you, isn't it, then, who says this:

"I think the time now is opportune. What I don't

169

have is an idea of all of the variables that need to be covered (or more importantly what stays the same), and what your main commercial drivers are. Would 1/2 day with the Kingspan insulation team (at yours) be the way forward?'

Now, do you recall Mr Meredith asking you for feedback as to the best way to test going forward?

- A. The conversation would be around basically testing so that you identify what are the worst-case scenarios to test, ie what are the hardest systems to test, and the aim would be -- and it's common across the fire industry and it's common across the test labs -- to set your testing up so you are testing the worst-case scenario. So potentially, if the testing's successful, you can then via assessment say, "We accept this data and we believe on this basis, on the basis of that test report, that this modification to the system is suitable".
- 18 Q. Did you actually have a meeting, the half day with the 19 Kingspan Insulation team?
- 2.0 A. No, I don't believe that ever happened.
- 2.1 Q. Why did you suggest it?
- 2.2 A. So that I could understand the number of different 23 systems that they wished to place on the market or what 2.4 they perceived they could get from a set of tests, and

25

to provide basically a framework where we could identify

170

1 the systems and the samples that we considered would be 2 the hardest to test, or the hardest to meet the BR 135

3 criteria

Q. Why did you need to understand what they perceived they 4 5 could get from a set of tests?

A. Because what -- if they're doing multiple tests, that 6 7 data could, at the time, and still can, be used for 8 assessments or extended applications, and knowing those 9 rules means that you can test for the test reports to be 10 accepted into a set of rules that exist in the standard 11 or within the organisation.

12 You say that you wanted to understand the number of 13 systems they wanted to put on the market and to provide 14 a framework, you say, "basically a framework where we 15 could identify the systems and the samples that we 16 considered would be the hardest to test"

> In summary, are you saying that you wanted to have this meeting with them so that you could glean more information from them with a view to being able to give them that advice?

2.1 A. Well, as I said, it's standard laboratory practice to 2.2 advise the clients of the most onerous testing 2.3 configurations. It's done often. Now, without knowing 2.4 what they were aiming to achieve, it's -- we couldn't do

25 that. As I said, that's standard laboratory practice.

171

1 In some areas there's documents and guidance and rules

2. in place; in other areas, like cladding, that's only

3 recently been developed. But without knowing what they

looked to achieve, we can't set the test programmes up.

5 Q. Can't set the test parameters, did you say?

6 A. The test programmes. Well, test ...

7 Q. Was it common for feedback of this type to be sought 8 from you by clients?

9 It's common across the fire testing sector. It's common 10 across the test labs.

11 Yes. Was it common for feedback of this type to be 12

sought from you by clients? 13 A. Yes, either directly or indirectly .

14 Q. Was it common for this type of feedback to be given by

15 the BRE and for these types of meetings and discussions

16 to be held with clients?

17

2.0

2.2

18 Q. It looks, on the basis of what you have told us just now

19 on this email, that this is a request by them for

commercial advice; do you accept that?

21 A. No. it's not commercial advice, it's stipulating -- it's

actually defining what you should test to maximise the

172

23 scope of the testing, and, as I said, it's common,

2.4 there's things called extended application rules that

2.5 are associated with test standards, there's direct

1 application rules that are extended -- that are 2 associated with standards, and laboratories are expected 2 "Another question for you and Stephen and Damien. 3 to know and implement those rules. 3 "Once this is boxed off we are good to go. "We would like to test 200mm of insulation however 4 Q. Why did you ask Mr Meredith what his main commercial 4 my current lead time for this product is very long thus 5 drivers are? 5 A. To understand the systems that they were looking to it would be more practical to test using two layers of 6 6 7 cover, not actually what's going to -- it was: what's 7 100mm. This would be installed using exactly the same 8 your main commercial drivers, in that what have you been 8 construction as previously tested. 9 asked to put up on walls? 9 "If we do this are the BRE happy to write into 10 Q. That's not quite the same. Why did you ask him what the 10 a classification assessment that this result would cover exactly the same construction with an individual or 11 main commercial drivers are, rather than what 11 12 12 configurations you want to test? multiple layer insulation thickness varying from 80mm 13 A. Turn of phrase. It would be: what's your main -- what 13 14 14 Just to be clear, this email chain is in relation to are you being asked to put up on walls, basically. 15 That's what I meant: what's your drivers? 15 BS 8414 tests on systems incorporating K15, at least 16 16 Q. Well, what are your main commercial drivers, we can have you any reason to disagree with what I've just put 17 17 argue about the language, but you're asking him what his to you? 18 financial goals are or what his financial motives are. 18 A. No, it would have been based on that. 19 19 Why was that of any concern of yours? Q. Yes 20 A. Well, I don't believe it was asking him what his 20 If we go, then, up to page 3 $\{BRE00005054/3\}$, 2.1 commercial -- it was the turn of phrase, and -- which 21 please, we can see that you respond to Ivor Meredith on 18 August 2014, copied to Phil Clark, subject "Cladding 22 I'd used at the time was: what's your drivers, ie what 22 2.3 23 are you being asked to produce the most of, or what tests", and you say: 2.4 market are you being asked to address? What systems are 2.4 "Ivor you being asked for BR 135 or testing to 8414 and 2.5 "As a minimum, we would need tests at either end of 173 175 1 BR 135? As I said, it's a common question. 1 the insulation thickness range. "Building up 200mm in layers for a single test 2 Q. Who was the Kingspan Insulation team that you were 2 3 suggesting you should meet to be able to gather more 3 doesn't really give us that info. (if I have understood 4 "Is the 200mm system going to be repeat of one of A. It would have been at that time Ivor Meredith and 5 5 6 whoever else he wished to bring in. 6 the existing tested systems? 7 7 Q. Well, you didn't suggest a half—day meeting with "I am also aware of the request below from you." 8 8 Ivor Meredith, you suggested one with the Then in italics you say: 9 9 "I appreciate your position/comments on the other Kingspan Insulation team. My question was really 10 directed at who else you wanted to see in order to 10 queries. With regards the next ten tests we need to 11 obtain the information so that you could provide the 11 move on this quickly thus we will try and sketch out the 12 feedback he'd requested? 12 sort of scope we desire." 13 13 A. Well, it would have been other people that could have Then you go on to say: 14 "I need to fully understand the variables we need to 14 supported Ivor or provide the information on what they 15 15 consider. The offer still stands for me to come up to needed to test or what they were being asked to supply 16 into the market, and the technical configuration of 16 you and go through this so we can try to meet your 17 17 requirements." 18 Q. Let's go to {BRE00005054}, please. This is quite a long 18 You then quote a section from an earlier email, 19 email chain in August 2014 between Kingspan and the BRE, 19 I think, regarding Mr Meredith's request for feedback on 2.0 2.0 so we'll take it in stages. the best way to test going forward and your offer for

174

an email from Ivor Meredith to Phil Clark and you, and

to Damien Ward as well, copied to others at the BRE.

Ivor Meredith says, under the subject "Scan from

Can we start with page 4 {BRE00005054/4}. This is

2.3

2.4

25

SINGER":

1		"How do you want to progress the planning of the	1		resistance and other areas.
2		next series of tests?"	2	Q.	We can see your response, if we go to page 2
3		Now, just pausing there, what are the other queries	3		$\{BRE00005054/2\}$ a little bit higher up the page. You
4		that you're referring to in the italicised section?	4		say, and this is now 20 August 2014:
5	Α.	There might have been other testing going on. I don't	5		"The approach seems sensible and we can accommodate
6		have a specific recollection on that point. There's	6		the range of insulation .
7		probably other emails around that time that I don't	7		"Same build—up of system but with thicker
8		recall that would actually directly answer that	8		insulation .
9		question.	9		"We will likely need to consider how the boards are
10	Q.	Now, I think you told us that the half—day meeting that	10		mounted (in terms of liner) so that there is no
11	•	you suggested never went ahead. Did the discussion go	11		discussion 'later' if you want to mix and match foam
12		ahead in another form, on the telephone, email, matters	12		thicknesses.
13		of that nature?	13		"On the strip down, it will be probably worth
14	Α.	I don't believe it did, I just don't think we ever got	14		looking at how far in the board was affected by the fire
15		to that point of reviewing their systems and basically	15		for future reference.
16		saying, "If you want to — if you wish to test — if you	16		"When are you going to start to ship?"
17		wish the scope of the document to be max and min	17		Then if we go to the bottom of page 1
18		insulation, then you have to test both". I don't	18		{BRE00005054/1} we can see Mr Meredith's response to
19		believe we ever got there.	19		you, also on 20 August, and he asks you the question:
20	0	If we go up to page 2 {BRE00005054/2}, we can see	20		"What are the possibilities to mix and match the
21	۷.	Mr Meredith's response to you the same day,	21		foam thicknesses i.e, can two x 100 be argued to perform
22		18 August 2014, again copied to Phil Clark, and he says:	22		the same as a 150 and a 50?? Ideally we would test with
23		"Hi Stephen, thanks for coming back to me.	23		200 but it's simply not available at this time."
24		"This would be tested in exactly the same	24		Then he goes on over the page, at the top of page 2
25		configuration as the last test however we would be	25		{BRE00005054/2}:
23		configuration as the last test nowever we would be	23		{BNE00003034/2}.
		177			179
1		looking to do an extreme of thickness i.e. so we can	1		"As far as mounting goes they will just be thrown up
2		extend our approval to 'perhaps' state behind terracotta	2		in a brick bond pattern with plastic fixers . I'm
3		K15 within a system can meet the requirements of BR 135	3		looking to ship as soon as we have this question
4		at thickness in single and multiple layers from 80mm to	4		answered.
5		200mm. As discussed we are capped at 120mm at the	5		"Any advice is appreciated."
6		moment but would like to cover up to 200mm could we do	6		Note that: "Any advice is appreciated".
7		this in 2×100 or 80 plus 120mm.	7		You respond the next day, if we can go back to
8		"We [seek] your guidance at the earliest possible	8		page 1 $\{BRE00005054/1\}$ again, please, 9.36 on 21 August,
9		opportunity as I would like to start shipping materials	9		middle of the screen there:
10		and bring the left over material back."	10		"Morning Ivor.
11		Then he goes on, over the page $\{BRE00005054/3\}$:	11		"We were on the same wave length. I had made the
12		"With regards the other questions that are secondary	12		assumption that it would be '200mm' either as a single
13		compared to this query. Please call if easier."	13		slab or in sections.
14		Do you recall whether you did in fact call	14		"The comment regarding the mounting (which I should
15		Mr Meredith to discuss the subject of this email?	15		have been clearer on) was in reference the facing
16	A.	I don't remember whether I called him. It	16		material on the insulation . Current thinking is that
17	Q.	It's very clear from what he's asking you, isn't it,	17		this should be installed with no facing material between
18		that he was wanting your guidance? Did you go back to	18		sections. This should provide a 'worse' case scenario
19		him and say, "Well, I'm terribly sorry, I can't give you	19		and answer any questions should these be raised in the
20		this kind of guidance"?	20		future.
21	Α.	All we're being asked there, which is standard	21		"Can you let me know timescales for shipping.
22		laboratory practice, is to define the limits in which he	22		"Are we at the point now where we should look at
23		would need to test if we could then feed into	23		options to allocate a frame for your future tests (so
20					

24

25

this one performs?"

you go back on the same frame) or do we need to see how

24

25

an assessment report from it. That is standard

laboratory practice across reaction to fire, fire

13

Now, when you say, "Current thinking is that this
should be installed with no facing material between
sections" — it's highlighted in yellow — what did you
mean by that?

A. Insulation material can come in a variety of facing

A. Insulation material can come in a variety of facing materials on the front for various purposes. The current thinking was if they wished us to state that 80 and 120—mil insulation would be —— have a similar performance or the same performance as 200 millimetres of insulation, those facing materials shouldn't be present because the view at the time was that was the worst—case scenario.

13 Q. I see. So just so that I've got your evidence, did you
14 mean that when it was mounted for the test, the section
15 slabs of K15 joining each other to make up the total
16 thickness required should not be faced?

17 A. That's right.

6

7

8

9

10

11

12

18 Q. Because that would then provide a worst—case test rig?

19 A. That was the proposal at that time.

20 Q. Was that not advice about the design of a test rig?

A. As I said, it's standard — we don't regard that as consultancy advice, it's just standard laboratory practice, to review all the parameters that you were going to test, ask the questions to make the test the

most effective. It's not saying to Ivor, "Well, you

181

shouldn't test like that because it will pass or fail", it's saying to Ivor or saying to others, "If you test the 200 millimetres in this configuration, we can express the opinion that this is a worst—case scenario". It's not providing advice that the system will pass or fail, it's telling them what is laboratory practice and

what is fire testing practice for dealing with multiple

8 thicknesses of insulation.

9 $\,$ Q. No, but isn't it advice about the best way to set up the 10 $\,$ test rig?

A. It's advice in terms of the most onerous test configuration, ie if you test without facings, then we are going to be —— we would be in a position to say you can test with either homogeneous insulation or in slab form. It's not advice saying: if you do this, you will pass.

Q. No, I understand the qualification you're putting, but
 I think you accept that it was the giving of advice
 about the design of a test rig in order to achieve or in
 order to establish a worst—case kind of rig?

A. Yes, it's information provided to the test sponsor —
which, as I said, is common across the whole of the
labs — what the standard approach would be and how we
should do that

 $25\,$ $\,$ Q. Do I take it from that answer that this sort of advice

182

was something the BRE commonly gave its clients other than Kingspan?

3 A. It's common across the fire testing labs, yes.

4 Q. I was talking about the BRE. I will repeat the 5 guestion --

6 A. It's common across the BRE fire test (inaudible).

7 Q. Can we look at {BRE00003449/2}, please. This is part of
8 an email chain from September 2013. Page 2 is an email
9 which starts on 12 September 2013, in fact I think it
10 ends that day as well, it's the last email on the screen
11 in front of you, and it's to Martin Gilbride and

(Interruption)

Jav Humphries.

Let's go back to the document. This was an email of
15 12 September 2013 from you to Martin Gilbride and
16 Jay Humphries, and can you just tell us who they were,
17 do you know?

A. Jay Humphries and Martin Gilbride basically worked out
 of Holywell, which is to the north of Wales. So they
 dealt specifically with the sandwich panels, which are

the twin skin products with a PIR insulation between the outer skins.

23 Q. Right. Which organisation do they work for, just to be

25 A. It's Kingspan Limited.

183

1 Q. You say:

"Martin, Jay.

 $\begin{tabular}{lll} {\tt "Has Kingspan any further thoughts on the scope of} \\ {\tt 4} & & {\tt the cladding tests?"} \end{tabular}$

Do you see that?

6 A. Yes.

2

5

18

19

2.4

2.5

 $7\,$ Q. Were you referring there to tests involving K15?

8 A. No.

9 Q. What were you referring to, is this sandwich panels?

10 A. Yes.

11 Q. Going up then to page 1 {BRE00003449/1}, we can see 12 Martin Gilbride responds to you on 11 October 2014, and 13 he says:

"Apologies for the delay in getting back to you.
The attached info is a helicopter view of things. If
you need extra details, we can drill into these when
needed."

Then he sets out a summary, "There are 8 types of construction for consideration", and some further

details below that.
He then asks a basic question, just below those six
bullet points. He says:

23 "The basic question is:

"# Would the testing of items 4, 6, 8 allow for the assessment of other systems eg. Take system 8, its

2.4

2.5

1

3

5

6

7

8

vertical AWP. Would the testing of it approve system 7 i.e. horizontal AWP or would we test the horiz AWP to approve both orientations?

25

"One other point, on the thickness of panel that we test, do we go with the thinnest or the thickest? At this moment [the] guys are only looking for 150mm on the Kreate system and 100mm on the CS and AWP systems. However, the CS based system in the future could be $100-175 \mathrm{mm}$ and the AWP could be $100-150 \mathrm{mm}$, so could do with your opinion on this also.

"The end game being Approval to BR135.

"If we can iron out some of this, we can then start making plans. Let us know what you think."

I know it wasn't K15, as we can see, it's sandwich panels, but this was a clear request for advice from you from Kingspan, wasn't it?

A. It's a clear request for us to stimulate —— sorry, stipulate what we thought was a worst-case scenario for testing, and to therefore allow data to be used for assessment purposes. It's not, "If you test in this configuration, we think you will pass", it's, "We think you need to test at both ends of this variable, from experience we believe this configuration would be worse to test than that one."

25 Q. Your response comes at the top of page 1, 11 October,

185

1 about 30 minutes later on the same day. You just say: 2 "Thanks very much -- we will begin to review." 3 You don't say, "I'm terribly sorry, we can't give 4 you an opinion about how to set up your test", do you?

- A. No, because the scope of what we were doing was clear, and the limitations of that is to define what we considered to be the most onerous set of test configurations then to be used for assessments. Now, that is the process that's going on, and all I can say is that's common across BRE and fire testing labs.
- Q. Can we go to {BRE00003448}, please. This, I think, is a further email run in the communications between you and Jay Humphries and Martin Gilbride. If we look at the second email down on that page, you will see that it's an email of 1 November 2013 from you to those two gentlemen:

"We have been through all of the systems and this is our current thinking on a test and assessment programme.'

Then you set out some details, and then you say in the penultimate line:

"We are happy to use this as a starting point for discussion "

Again, this is clearly, isn't it, the BRE giving

186

advice to Kingspan about their testing plans; yes?

2 A. No, it's advice telling them what we considered to be

3 the most onerous configurations. So if we do this, then

4 we're not saying whether it passes or fails, what we are 5 saying is that will give you a set of data that we can

use for other extrapolations. And as I said, it's 6

7 common throughout the fire industry -- fire testing 8 industry.

9 Q. Yes. Was this question not one solely for the test 10 sponsors? Namely they come along with a rig, they ask 11 you to test it, you test it and you produce the results?

12 No. as I said, the current system is there's

13 considerable numbers of extended application rules,

14 direct application rules, product standards,

15 classification documents, that give a whole list of

16 parameters that you should consider in test programmes.

17 There's a lot of documentation out there. I cannot --

18 I think it's appropriate for test laboratories to know

19 those and to be able to say, "If you wish this range of

2.0 insulations to be -- insulation thicknesses to be 21 covered, you should test at max and min; if you want the

22 range of colours to be tested, then the information or

23 guidance that we can access is this".

> It's not telling them what they need to do to get through a test; it's telling them what we consider to be

> > 187

the worst-case scenario.

2. Q. Well, it's clear from this email, and all the others we've seen up to this point, but at least on this one, that you're setting out the BRE's opinion on an appropriate test and assessment programme.

Given that, as we can see from this email, your own words, how do you consider you were able to give that advice while at the same time remaining impartial?

9 A. Because the advice is not on the -- the advice is not 10 advice on how to get through the test. The advice is 11 giving experience or knowledge on what test parameters 12 are critical and what should be tested to maximise the 13 effectiveness of the test programme. As I said, it's there's lots of rules, there's lots of documentation 14

15 that's available in support of this.

16 Q. Why would that not be the giving of advice or 17 consultancy?

18 A. Because what we're not doing is -- all we're doing is 19

imparting standard knowledge with regard to testing, and all we are saying is, "You need to test in this 2.0

21

configuration". We're not saying, "If you test in this 2.2 configuration you will pass" because we don't know the

23

2.4 When you are answering my question about impartiality,

2.5 are you telling us that in fact you thought that you

what would pass or what would fail? Is that where you did and the distinction between partiality and impartiality? 4 5 6 6 6 6 7 7 7 7 8 7 8 7 8 9 9 10 11 12 12 13 14 15 15 15 15 15 15 15 15 15 15 15 15 15	1		crossed the line into partiality when you advised on	1	the parameters to consider when they're putting forward
4 advice, the standards of importality? that we've seen in the expression of an opinion, then you are — yeah, I think 6 expression of an opinion, then you are — yeah, I think 6 expression of an opinion, then you are — yeah, I think 6 was not supposed to advise clients? 7 d. No. I was giving an opinion on what the upper and lower on the best kind of rig to test? 8 MR MILLETT: You don't. 9 on the best kind of rig to test? 10 A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to test. There is no information in there that asys. 11 test is. There is no information in there that asys. 12 test is. There is no information in there that asys. 13 This will pass?; it's, "The best data you will get will to configuration", and it passes. 14 be — or the most usable data is if you follow this configuration", and it passes. 15 co. Is it fair to say that, throughout the emails we have been looking at, and I've given you a selection, it was the RRE's practice to work closely with, collaborate, to use the RRE's practice to work closely with, collaborate, to use the Chairman's work with Kingsano much design and configuration of their test rigs? 10 A. There was a — it wouldn't go as far as design, it would be set stimp the parameters between which your client and things of that nature. 189 190 10 Q. In an email we've just looked at —— not the one on the screen, but we've just looked at —— not the one on the sought your views with that as the ultimate goal, weren't you? 189 190 10 Q. In an email we've just looked at —— not the one on the screen, but we've just looked at —— not the one on the screen, but we've just looked at —— finandible) that the end game was approval to BR 135, so you were being we could corry forward from a set of test data, and that a sought your views with that as the ultimate goal, weren't you? 10 A. Well, as I said, they would ask what technical reviews we could corry forward from a set of test data, and that reviews grow we could ca	2		what would pass or what would fail? Is that where you	2	a test structure (?).
5 A. Yes, I think at that point, if you get into the expression of an opinion, then you are — yeah, I think that is problematic. 8 Q. But you were giving an opinion, weren't you, frequently, on the beak kind of rig to test? 9 A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to 11 parameters would be and what the worst kind of rig to 11 parameters would be and what the worst kind of rig to 11 parameters would be and what the worst kind of rig to 11 be, Mr Millett, so I think it must be. 12 test is. There is no information in there that says, 12 You have some more questions, I imagine, for Mr Howard, have you? 13 "This will pass"; it is, The best data you will get will be — or the most usable data is if you follow this configuration, and it passes. 14 The sould be death is if you closely with, collaborate, to 15 seen looking at, and I vie given you a selection, it was the BEF spractice to work closely with, collaborate, to 18 use the Chairman's word, with Kingspan on the design and 20 configuration of their test rigs? 15 A. There was a — it wouldn't go as fir as design, it would 21 should test. So, again, it would be mais insulation, you might have to consider colours and things of that nature. 189 191 191 191 192 193 191 191 194 Q. In an email we've just looked at —— not the one on the screen, but we've just looked at —— (inaudible) that the end game was approval to BR 135, so you were being sought your views with that as the ultimate goal, weren't you? 194 A. Well, as I said, they would ask what technical reviews 15 was creen, but we've just looked at —— (inaudible) that the end game was approval to BR 135, so you were being we could carry forward from a set of test data, and that was the information that we were providing. As I said, the world paper is a said that the scope of the said that the scope of what — the score of information that we were providing. As I said, the guidance and advice to Kingspan in relation to testing and as	3		draw the distinction between partiality and	3	Q. Do you accept that you did not maintain, by giving this
6 expression of an opinion, then you are — yeah, I think that is problematic. 8 Q. But you were giving an opinion, weren't you, frequently, on the best kind of rig to test? 9 on the best kind of rig to test? 10 A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to 11 be. Mr Millett, so I think it must be. 11 you have some more questions, I imagine, for 11 be. Mr Millett, so I think it must be. 12 You have some more questions, I imagine, for 12 Won have some more questions, I imagine, for 13 Mr Howard, have you? 14 be — or the most usable data is if you follow this configuration", and it passes. 15 Q. Is it fair to say that, throughout the emails we have the BRE's practice to work closely with, collaborate, to use the Chairman's word, with Kingspan on the design and configuration of their test rigs? 16 Q. In an email we've just looked at — not the one on the screen, but we've just looked at —— (mandible) that the sought your views with that as the ultimate goal, we're'n you? 189 190 1 Q. In an email we've just looked at —— not the one on the screen, but we've just looked at —— (mandible) that the sought your views with that as the ultimate goal, we're find your views with that as the ultimate goal, we're'n you? 2 A. Well, as I said, they would ask what technical reviews we could carry forward from a set of test data, and that was the information that we were providing. As I said, it is knowledge of testing principles and extended application rules used on a regular basis. 10 Q. Do you garee that while you were in this role as joint the first was a provided to the cline I think that the scope of what — that we confidence on a regular basis. 15 you have some more gestions, I think we have already said that there is a fair chance that you'll get away by undersumed 10 o'clock tomorrow, and I think that the scope of what — the work of information that we were providing. As I said, they would ask what technical reviews we could carry forward from a set of test	4		impartiality ?	4	advice, the standards of impartiality that we've seen in
that is problematic Q. But you were giving an opinion, weren't you, frequently, on the best kind of rig to test? A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to test? A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to test is. There is no information in there that says, the standard was also and what the worst kind of rig to test is. There is no information in there that says, the standard was also and th	5	Α.	Yes, I think at that point, if you get into the	5	the standard, the ISO standard, and the rule that BRE
But you were giving an opinion, weren't you, frequently, on the best kind of rig to test? A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to test? A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to test is. There is no information in there that says, 12 You have some more questions, I imagine, for "This will pass"; it's, "The best data you will get will 13 Mr Howard, have you? Mr Mouard, have you? Mr MILLETT: We have. We've come to a natural point in the questioning anyway for a break, quite apart from the fact that it's — fact that it's — Sire MaRTIN MOORE—BICK: I think he might like to know how much longer you will detain him. Mr MILLETT: Yeu have some more questions, I imagine, for Mr Howard, have you? Mr MILLETT: We have. We've come to a natural point in the questioning anyway for a break, quite apart from the fact that it's — Sire MARTIN MOORE—BICK: I think he might like to know how much longer you will detain him. Mr MILLETT: Yeu would be for the morning tomorrow, but if we can go a little shorter than that, it would obviously be helpful for him. It is likely it will take the morning. Sire Martin MOORE—BICK: Right. Mr MILLETT: Yeu vold be for the morning tomorrow, but if we can go a little shorter than that, it would obviously be helpful for him. It is likely it will take the morning. Sire Martin MOORE—BICK: Right. Mr MILLETT: Yeu vold be from the fact that it's — I would be for the morning tomorrow, but if we can go a little shorter than that, it would obviously be helpful for him. It is likely it will take the morning. Sire Martin MOORE—BICK: Right. Mr MILLETT: Yeu vold be from the morning tomorrow will that he were provided to the morning. Sire Martin MOORE—BICK: I think you were warned that we might need you again tomorrow. 189 191 Q. In an email we've just looked at — not the one on the screen, but we've just looked at — not the one on the screen, but we've just loo	6		expression of an opinion, then you are $$ yeah, I think	6	was not supposed to advise clients?
on the best kind of rig to test? A. No, I was giving an opinion on what the upper and lower parameters would be and what the worst kind of rig to test is. There is no information in there that says, "This will pass"; it?s. "The best data you will get will the bear of the most usable data is if you follow this configuration", and it passes. Q. Is it fair to say that, throughout the emails we have been looking at, and I've given you a selection, it was been looking at, and I've given you a selection, it was the BRE's practice to work closely with, collaborate, to use the Chairman's word, with Kingspan on the design and configuration of their test rigs? A. There was a — it wouldn't go as far as design, it would be setting the parameters between which your client should test. So, again, it would be max insulation, and things of that nature. 189 Q. In an email we've just looked at — not the one on the screen, but we've just looked at — (inaudible) that the end game was approval to BR 135, so you were being and game was approval to BR 135, so you were being agame was approval to BR 135, so you were being approved by the view with that as the ultimate goal, weren't you? A. Well, as I said, they would ask what technical reviews we could carry forward from a set of test data, and that was the information that we were providing. As I said, it's knowledge of testing principles and extended application rules used on a regular basis. Q. Do you agree that while you were in this role as joint business group manager at the RBE, you were closely involved in providing guidance and advive to Kingspan in relation to testing and assessment of a variety of external cladding façades, and gave advice as to which of a number of specific construction types you would that the test data. I think that the scope of what— 20 with that test data. I think that the scope of what— 21 that scope of information provided to the client I think 21 that scope of information provided to the client I think 22 the that scope of information provide	7		that is problematic.	7	A. No.
10 A. No, I was giving an opinion on what the upper and lover 11 parameters would be and what the worst kind of rig to 12 test is. There is no information in there that says, 13 "This will pass"; it's, "The best data you will get will 14 be — or the most usable data is if you follow this 15 configuration", and it passes. 16 Q. Is it fair to say that, throughout the emails we have 16 be — ookoling at, and I've given you a selection, it was 17 been looking at, and I've given you a selection, it was 18 the BRE's practice to work closely with, collaborate, to 19 use the Chairman's word, with Kingspan on the design and 20 configuration of their test rigs? 21 A. There was a —— it wouldn't go as far as design, it would 22 be setting the parameters between which your client 23 should test. So, again, it would be max insulation, 24 minimum insulation, you might have to consider colours 25 and things of that nature. 26 In an email we've just looked at —— not the one on the 27 screen, but we've just looked at —— not the one on the 28 screen, but we've just looked at —— finaudible) that the 29 sught your views with that as the ultimate goal, 20 weren't you? 21 A. Well, as I said, they would ask what technical reviews 22 we could carry forward from a set of test data, and that 23 sought your views with that as the ultimate goal, 24 was the information that we were providing. As I said, 25 it's knowledge of testing principles and extended 26 application rules used on a regular basis. 27 Q. Do you agree that while you were in this role as joint 28 business group manager at the BRE, you were dosely 29 involved in providing addance and advice to Kingspan in 29 relating to it wore the grad. 20 relating a diagrance and advice to Kingspan in 21 relation to testing and assessment of a variety of 22 extend adding facades, and gave advice as to which 24 of a number of specific construction types you would 29 with that test data. I think that the scope of what —— 20 with that test data. I think that the scope of what —— 21 that scope	8	Q.	But you were giving an opinion, weren't you, frequently,	8	MR MILLETT: You don't.
be, Mr Millett, so I think it must be. 12 test is. There is no information in there that says, 13 "This will pass"; it.", The best data you will get will 14 be — or the most usable data is if you follow this 15 configuration", and it passes. 16 Q. Is it fair to say that, throughout the emails we have 16 been looking at, and I've given you a selection, it was 17 been looking at, and I've given you a selection, it was 18 been looking at, and I've given you a selection, it was 19 use the Chairman's word, with Kingspan on the design and 20 configuration of their test rigs? 21 A. There was a — it wouldn't go as far as design, it would 22 be setting the parameters between which your client 23 should test. So, again, it would be max insulation, 24 minimum insulation, you might have to consider colours 25 and things of that nature. 26 and email we've just looked at — not the one on the 27 screen, but we've just looked at — foi mouth that as the ultimate goal, 28 werent you? 29 A. Well, as I said, they would ask what technical reviews 29 and things of that nature. 20 and mail we've just looked at — foi mouthing to goal in the might like to know how 29 minimum insulation, you might have to consider colours 20 and things of that nature. 21 A. There was a — it wouldn't go as far as design, it would be 21 be setting the parameters between which your client 22 screen, but we've just looked at —— not the one on the 23 simulation, you might have to consider colours 24 Well, Mr Howard, I think you were warned that we might need you again tomorrow. 25 IMARTIM MOORE—BICK: It sounds as though we shan't need 26 you beyond lunchtime, if that's of any help, I don't 27 knowledge of testing principles and extended 39 you beyond lunchtime, if that's of any help, I don't 40 know. 41 Yell well that the were providing. As I said, 42 was the information that we were providing. As I said, 43 was the information that we were providing. As I said, 44 was the information that we were providing. As I said, 4	9		on the best kind of rig to test?	9	Mr Chairman, is that a convenient moment?
test is. There is no information in there that says, "This will pass"; it is, "The best data you will get will be — or the most usable data is if you follow this configuration", and it passes. Q. Is it fair to say that, throughout the emails we have the BRE's practice to work closely with, collaborate, to use the Chairman's word, with Kingspan on the design and configuration of their test rigs? 10. A There was a — it wouldn't go as far as design, it would 21. A. There was a — it wouldn't go as far as design, it would 22. be string the parameters between which your client 23. should test. So, again, it would be max insulation, minimum insulation, you might have to consider colours and things of that nature. 189 191 1 Q. In an email we've just looked at —— not the one on the screen, but we've just looked at —— not the one on the screen, but we've just looked at —— (inaudible) that the end game was approval to BR 135, so you were being sought your views with that as the ultimate goal, weren't you? 5 A. Well, as I said, they would ask what technical reviews we could carry forward from a set of test data, and that was the information that we were providing. As I said, it is knowledge of testing principles and extended application rules used on a regular basis. Q.
